**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

SUMMARY  
February 8, 2016

## **1.0 SUMMARY**

Stantec completed this Phase I Environmental Site Assessment (ESA) of the proposed project site for power generation located at 3001 Scholl Canyon Road, Glendale, California 91206 (the "Property"), on behalf of City of Glendale (the "Client"). The work was performed in accordance with Stantec's proposal and terms and conditions dated August 25, 2015. The City of Glendale (the "User") has been designated as the User of this report.

The Phase I ESA was conducted in conformance with USEPA Standards and Practices for AAI, 40 CFR Part 213 and the requirements of ASTM Designation E 1527-13, except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM practice are described in Section 2.3 and 8.2. The purpose of this Phase I ESA was to evaluate the current and historical conditions of the Property in an effort to identify recognized environmental conditions (RECs) and historical recognized environmental conditions (HRECs) in connection with the Property.

The Property, which is proposed for construction, is comprised of a three-acre landfill gas processing facility within the Scholl Canyon Landfill and a pipeline corridor extending approximately 2/3 mile to the west of the landfill. The Property is located approximately one half mile north of the 134 Freeway on Scholl Canyon Road in the City of Glendale, Los Angeles County, California. The purpose of the proposed project development is to beneficially utilize methane-rich renewable landfill gas (LFG) as fuel to generate electricity (13 megawatts). In addition, 2/3 mile of natural gas pipeline will be constructed to connect the facility to the existing Southern California Gas Company pipeline system located at the eastern end of Scholl Canyon Drive. The Scholl Canyon Landfill is also reportedly identified as 7721 North Figueroa Street, Los Angeles, California 90047. Surrounding properties include vacant land, landfill (active and inactive) and residential properties.

The following items of note were identified during this ESA:

- Three above ground storage tanks (ASTs; 6,000-gal, 4,885-gal and 4,561-gal) storing diesel were observed approximately 500 feet northeast of the Property. No secondary containment was observed. Since these ASTs are not located on the Property and no violations/leaks/spills were reported, the ASTs are considered as an item of note for the Property but not a REC.
- The Environmental Data Resources (EDR) database reported presence of a 500-gal underground storage tank (UST) with regular unleaded gasoline used for motor vehicle fuel at the landfill. Since no spills, leaks or violations were reported and the reported UST is not on the Property, it is considered as an item of note for the Property but not a REC.

Stantec performed this Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the Property. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed the following RECs in connection with the Property:

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

SUMMARY

February 8, 2016

- During the site reconnaissance, Stantec observed numerous drums and poly tanks which stored various hazardous chemicals and/or waste oil on the Property. Storage of petroleum hydrocarbons and hazardous chemicals at a facility is considered a REC. However, during the site reconnaissance, Stantec did not notice evidence of leaks or spills at the Property. Stantec also observed that some drums containing hazardous chemicals were stored on secondary containment; and
- The Property is a natural gas processing facility and is a part of an active landfill, and as such, there is a possibility of release of gas emissions including methane. The landfill was historically reported to accept some contaminated soils, and groundwater is being monitored for impacts from volatile organic compounds (VOCs). Therefore presence of a landfill is considered as a REC. However, no buildings were observed on the Property during the site reconnaissance which eliminated the current possibility of indoor air quality issues and it was reported that the landfill currently accepted only nonhazardous waste, potentially limiting the types of hazardous gas emissions from the landfill.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

INTRODUCTION  
February 8, 2016

## **2.0 INTRODUCTION**

The objective of this Phase I ESA was to perform appropriate inquiry into the past ownership and uses of the Property in accordance with the United States Environmental Protection Agency (USEPA) Standards and Practices for All Appropriate Inquiries [(AAI), 40 CFR Part 312] and consistent with good commercial or customary practice as outlined by the ASTM in “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process”, Designation E1527-13. The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including recognized environmental conditions (RECs) of the Property.

The ASTM E1527-13 standard indicates that the purpose of the Phase I ESA is to identify RECs, including historical recognized environmental conditions (HRECs), and controlled recognized environmental conditions (CRECs) that may exist at a property. The term “recognized environmental conditions” means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property:

- (1) Due to any release to the environment;
- (2) Under conditions indicative of a release to the environment; or
- (3) Under conditions that pose a material threat of a future release to the environment.

ASTM defines a “HREC” as a REC that has occurred in connection with the property, but has been addressed to the satisfaction of the applicable regulatory authority and meets unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a HREC, the environmental professional must determine whether the past release is a REC when the current Phase I ESA is conducted (for example, if there has been a change in the regulations). If the EP considers the past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a REC.

ASTM defines a “CREC” as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

*De minimis* conditions are not RECs. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. As indicated, the term REC does not include *de minimis* conditions, which generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

This ESA was conducted in accordance with our proposal to The City of Glendale dated August 25, 2015. The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Property,

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

INTRODUCTION  
February 8, 2016

interviews with key individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform any independent evaluation of the purchase or lease price of the Property and its relationship to current fair market value. The conclusions presented in this ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-13 notes that the availability of record information varies from source to source. The User or Environmental Professional is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. "Reasonably ascertainable" means:

- (1) Information that is publicly available;
- (2) Information that is obtainable from its source within reasonable time and cost constraints; and
- (3) Information that is practicably reviewable.

## **2.1 PROPERTY DESCRIPTION**

The Property which is proposed for construction is comprised of the three-acre landfill gas processing facility within the Scholl Canyon Landfill and a pipeline corridor extending 2/3 mile to the west of the landfill. The Property is located approximately one half mile north of the 134 Freeway on Scholl Canyon Road in the City of Glendale, Los Angeles County, California. The purpose of the proposed project is to beneficially utilize methane-rich renewable landfill gas (LFG) as fuel to generate electricity (13 megawatts). In addition, 2/3 mile of natural gas pipeline will be constructed to connect the facility to the existing Southern California Gas Company pipeline system located at the eastern end of Scholl Canyon Drive. The Scholl Canyon Landfill is also reportedly identified as 7721 North Figueroa Street, Los Angeles, California 90047. Surrounding properties include vacant land, landfill (active and inactive) and residential properties.

## **2.2 SPECIAL TERMS, CONDITIONS, AND SIGNIFICANT ASSUMPTIONS**

The possible contaminants of concern considered in this assessment include those hazardous compounds listed under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). Other than adherence to Client specific scope of work requirements, there were no other special terms, conditions, or significant assumptions associated with the Phase I ESA.

## **2.3 EXCEPTIONS AND LIMITING CONDITIONS**

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided. No other representations, warranties or guarantees are made concerning the accuracy or completeness of the data or conclusions

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

INTRODUCTION  
February 8, 2016

contained within this report, including no assurance that this work has uncovered all potential and actual liabilities and conditions associated with the identified property.

This report provides an evaluation of selected environmental conditions associated with the identified portion of the property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information. All information received from the client or third parties in the preparation of this report has been assumed by Stantec to be correct. Stantec assumes no responsibility for any deficiency or inaccuracy in information received from others.

If a service is not expressly indicated, do not assume it has been provided. If a matter is not addressed, do not assume that any determination has been made by Stantec in regards to it.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report, and are based solely on the scope of work described in the report, the limited data available and the results of the work. They are not a certification of the property's environmental condition.

The client did not provide or contract Stantec to provide recorded title records or search results for environmental liens or activity and use limitations encumbering the property or in connection with the Property. These represent data gaps; however, these data gaps are not considered significant. Based on the information obtained during the course of this ESA and general knowledge of development at and near the Property, the absence of this information did not affect the ability of the Environmental Professionals to identify RECs, HRECs, CRECs, or de minimis conditions.

This report relates solely to the specific project for which Stantec was retained and the stated purpose for which this report was prepared and shall not be used or relied upon by the client identified herein for any variation or extension of this project, any other project or any other purpose.

This report has been prepared for the exclusive use of the client identified herein and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities, or claims, howsoever arising, from third party use of this report.

The locations of any utilities, buildings and structures, and property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures are not guaranteed. Before starting work, the exact location of all such utilities and structures must be confirmed by the client and Stantec assumes no liability resulting from damage to such utilities and structures.

The conclusions are based on the site conditions encountered by Stantec at the time the work was performed. Accordingly, additional studies and actions may be required. As the purpose of this report is to identify selected site conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the site is beyond the scope of this assessment. The findings, observations, and conclusions expressed by Stantec in this report are not an opinion concerning

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

INTRODUCTION  
February 8, 2016

the compliance of any past or present owner or operator of the site which is the subject of this report with any Federal, state or local law or regulation.

This report presents professional opinions and findings of a scientific and technical nature. It does not and shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations or policies of Federal, state or local governmental agencies. RECs raised by the report should be reviewed by client legal counsel.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the property subsequently change.

## **2.4 PERSONNEL QUALIFICATIONS**

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an Environmental Professional (EP). The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

USER-PROVIDED INFORMATION

February 8, 2016

### **3.0 USER-PROVIDED INFORMATION**

ASTM E1527-13 describes responsibilities of the User to complete certain tasks in connection with the performance of “All Appropriate Inquiries” into the Property. The ASTM standard requires that the Environmental Professional request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or de minimis conditions in connection with the Property. Towards that end, Stantec requested that the User provide the following documents and information:

| <b>Description of Information</b>                          | <b>Provided<br/>(Yes / No)</b> | <b>Description and/or Key Findings</b>  |
|--|--------------------------------|---|
| User Questionnaire/Interview                               | Yes                            | The User provided site contact information and provided access to the Property. |
| Environmental Liens or Activity Use Limitations            | No                             | The user reportedly does not possess any of these documents                     |
| Previous Environmental Permits or Reports Provided by User | No                             | The user reportedly does not possess any of these documents.                    |
| Purpose of the Phase I ESA                                 | Yes                            | In support of proposed construction on the Property.                            |

 BIOGAS RENEWABLE GENERATION PROJECT  
 3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

RECORDS REVIEW  
 February 8, 2016

**4.0 RECORDS REVIEW**

The objective of consulting historical sources of information is to develop the history of the Property and surrounding area, in order to evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from the present to the first developed use of the Property. Stantec’s research included the reasonably ascertainable and useful records described in this section.

**4.1 PHYSICAL SETTING**

A summary of the physical setting of the Property is provided in the table below with additional details in the following subsections:

|   |   |
|---|---|
| Topography:   | Township 1S, and Range 13W. Pasadena 7.5 Minute topographic quadrangle. General topographic gradient is south southwest.  |
| Soil/Bedrock Data:  | Boring logs obtained from a nearby site stated that soils consist predominantly of silty sand and sandy silt (Rincon, 2013).  |
| Estimated Depth to Groundwater/<br>Estimated Direction of Gradient:   | First encountered groundwater in the vicinity of the Property has been reported to be at approximately 50 feet below ground surface (ft bgs; see Section 4.1.3). Groundwater flow direction for the adjacent site (Inactive Scholl Canyon Landfill) was reported to be south southwest. |
| <i>Note: Site-specific groundwater direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.</i> |   |

**4.1.1 Property Topography and Surface Water Flow**

The Property is located at an elevation of approximately 1,176 feet above mean sea level (ft msl). Based on the topography and existing surface conditions, general surface water flow is to the south southwest.

**4.1.2 Regional and Property Geology**

The Scholl Canyon area has narrow valleys lined with varying amounts of alluvium and colluvium. Bedrock in this area is quartz diorite and diorite, and is highly jointed and fractured. The Canyon which lies in the San Fernando Valley Groundwater Basin is bounded on the north and northwest by the Santa Susana Mountains, on the north and northeast by the San Gabriel Mountains, on the east by the San Rafael Hills, on the south by the Santa Monica Mountains and Chalk Hills, and on the west by the Simi Hills (DWR Bulletin 118, 2004).

The Property is underlain by granitic and metamorphic rocks including gneiss. Scholl Canyon area consists of narrow valleys covered by varying thicknesses of alluvium and colluvium and intervening ridges. Bedrock in this area, which is highly jointed and fractured, consists of quartz diorite and diorite.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

RECORDS REVIEW  
February 8, 2016

Based on soil samples collected during site assessments activities at a nearby site (4927 Eaglerock Boulevard), soil types consisted predominantly of silty sand and sandy silt (Rincon, 2013).

#### **4.1.3 Regional and Property Hydrogeology**

Scholl Canyon is tributary to the San Fernando Valley, which is underlain by the San Fernando Groundwater Basin. The surface and ground waters of this basin are used extensively for domestic, agricultural, and industrial purposes. The water-bearing sediments consist of the lower Pleistocene Saugus Formation, Pleistocene and Holocene age alluvium. The ground-water in this basin is mainly unconfined with some confinement within the Saugus Formation in the western part of the basin and in the Sylmar and Eagle Rock areas. Regional groundwater flow direction is generally reported toward the south southwest (DWR Bulletin 118, 2004).

Third Quarter 2015 quarterly groundwater monitoring results at the adjacent site (Inactive Scholl Canyon Landfill) reported the depth to water to be approximately 50 feet bgs (SCS Engineers, 2015).

#### **4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS**

A regulatory agency database search report was obtained from Environmental Data Resources Inc. (EDR), a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix D.

Stantec evaluated the information listed within the database relative to potential impact to the Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Property. As described in 4.1.3, the regional groundwater flow direction is generally to the south southwest. Observations about the Property and surrounding properties made during the Property reconnaissance are provided in more detail in section 5.

##### **4.2.1 Listings for Property**

The Property was identified in the RCRA-SQG, FINDS, HAZNET, SWF/LF, EMI, Financial Assurance, Los Angeles Co. HMS and US AIRS.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
 BIOGAS RENEWABLE GENERATION PROJECT  
 3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

RECORDS REVIEW  
 February 8, 2016

| Database Listing | Description   |
|------------------|---|
| FINDS            | The Property is registered in the FINDS database with Registry ID: 110055841754.  |
| HAZNET           | The Property was listed in the database as a storage, bulking, transfer off-site facility of liquids with halogenated organic compounds and oxygenated solvents.  |
| NPDES            | The Property is listed as a facility requiring National Pollutant Discharge Elimination System (NPDES) permit as of 2010. NPDES no. CAS000001.  |
| EMI              | The Property reportedly emitted total organic hydrocarbon gases, reactive organic gases, carbon monoxide, nitrogen oxides, sulfur oxides, and particulate matters from 1995 to 2001 and from 2009 to 2012.  |
| RCRA-SQG         | The Property is listed as a generator of ignitable and corrosive waste. No violations were reported.  |
| US AIRS          | The Property was listed in the State Implementation Plan for National Primary and Secondary Ambient Air Quality Standards consisting of compliance monitoring from 1998 to 2014. The Property reportedly retained a Title V permit from 2006 to 2014. |

**4.2.2 Listings for Nearby Sites with Potential to Impact Property**

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions to pose a REC, CREC, or HREC for the Property.

The Scholl Canyon Inactive Landfill is listed on RWQCB’s GeoTracker website as a Land Disposal Site with cleanup status ‘Open – Verification Monitoring as of 1/1/1965’. The Second Quarter 2015 Monitoring Reports stated that the landfill was opened in 1961 and it accepted slightly contaminated soils, uncontaminated soils, green waste and asphalt for onsite beneficial reuse for disposal in the past. Currently the landfill only accepts non-hazardous waste. The reports also state that currently there are 11 groundwater monitoring wells at the active landfill and 2 groundwater monitoring wells in the vicinity of the landfill, in which sampling is conducted on a quarterly basis. The volatile organic compounds (VOCs)

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

RECORDS REVIEW  
February 8, 2016

detected in some of the groundwater samples collected during the third quarter 2015 event were chloroform, acetone, ethylbenzene and toluene. The VOCs detected in the groundwater historically include benzene, 1,2-dichlorobenzene, 1,4-dichlorobenzene, chlorobenzene, isopropylbenzene, n-propylbenzene and sec-propylbenzene. The reports also stated that storm water monitoring is conducted at the Landfill. Per the most recent storm event, the monitoring results that exceeded USEPA benchmarks were total suspended solids, iron and zinc.

Presence of a landfill as part of the Property is considered as a REC for the Property. The EDR database reported presence of a 500-gal UST with regular unleaded gasoline used for motor vehicle fuel at the landfill. Since no spills or leaks were reported, presence of a UST is considered as an item of note for the Property but not a REC.

EDR database also identified additional nearby sites in the vicinity of the Property to be reportedly maintaining USTs. The database search did not report any information at these sites which would constitute a potential REC for the Property. These sites were also outside the potential vapor encroachment radius of the Property (within 1/10<sup>th</sup> of a mile for petroleum hydrocarbons and within 1/3<sup>rd</sup> of a mile for VOCs). The listings in the database search report provided in Appendix D.

#### **4.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS**

Stantec checked the following sources to obtain information pertaining to Property use and/or indications of RECs in connection with the Property:

photographs alone. The following table summarizes Stantec’s observations of the reviewed historical aerial photographs. The aerial photographs are presented in Appendix E as Historical Records.

| <b>Year</b> | <b>Scale</b> | <b>Observations, Property and Adjoining Properties</b>   |
|-------------|--------------|--|
| 1928        | 1"=500'      | The Property and surrounding areas appear to be forestland.  |
| 1938        | 1"=500'      | The Property and surrounding areas appear to be forestland.  |
| 1952        | 1"=500'      | The Property and surrounding areas appear to be forestland.  |
| 1964        | 1"=500'      | The Property appears undeveloped. The currently inactive landfill appears to be developed. Scholl Canyon Road appears to be developed.   |
| 1972        | 1"=500'      | The Property appears undeveloped.  |
| 1977        | 1"=500'      | No significant changes in the Property or the vicinity of the Property since the 1972 aerial photograph.   |
| 1983        | 1"=500'      | The Property appears to be under construction as a landfill gas processing facility. The two ASTs currently present on the active landfill appear approximately 500 feet northeast of the Property.  |
| 1989        | 1"=500'      | The Property appears to be developed as a landfill gas processing facility for the landfill.   |
| 1994        | 1"=500'      | No significant changes in the Property or the vicinity of the Property since the 1989 aerial photograph.   |
| 2002        | 1"=500'      | The landfill portion of the Property appears to be in the current configuration consisting of a condensate processing facility, flaring station, gas compressors, tool shed, refrigeration exchange skid, condensate treatment area and office area. |
| 2005        | 1"=500'      | No significant changes in the Property or the vicinity of the Property since the 2002 aerial photograph.   |
| 2009        | 1"=500'      | No significant changes in the Property or the vicinity of the Property since the 2005 aerial photograph.   |
| 2010        | 1"=500'      | No significant changes in the Property or the vicinity of the Property since the 2009 aerial photograph.   |
| 2012        | 1"=500'      | No significant changes in the Property or the vicinity of the Property since the 2010 aerial photograph.   |

#### 4.4.4 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps, which have been periodically updated since the late 19th century, provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Property.

Stantec contracted with a third party to search for copies of historical fire insurance maps covering the subject and immediately adjacent properties. No maps were available for the Property or adjacent properties. The Sanborn® Map Search Report is presented in Appendix E as Historical Records.

#### 4.4.5 Historical Topographic Maps

Stantec reviewed historical topographic maps to help identify past Property usage and areas of potential environmental concern.

The United States Geological Survey (USGS) 7.5-Minute Topographic Map of Pasadena Quadrangle (scale 1:24,000) was reviewed to identify local and regional physiographic features in the vicinity of the Property (see Figure 1). Based on our review of this data, the Property is located at an elevation of approximately 1,176 ft msl and the general topographic gradient is to the south southwest.

No RECs were noted during our review of the topographic maps. Copies of the historical maps are provided in Appendix E as Historical Records. The following table summarizes the maps reviewed and our observations.

| Year | Scale     | Observations, Property and Adjoining Properties   |
|------|-----------|---|
| 1896 | 1:62,500  | No details regarding specific development of the Property were observed. No structures or indicators of potential RECs for the Property were depicted on the maps.  |
| 1900 | 1:62,500  |   |
| 1901 | 1:250,000 |   |
| 1941 | 1:24,000  |   |
| 1953 | 1:24,000  |   |
| 1953 | 1:24,000  | No details regarding specific development of the Property were observed. The currently active landfill is depicted on 1988 through 1995 maps. Presence of a landfill on the Property is considered a REC. |
| 1966 | 1:24,000  |   |
| 1972 | 1:24,000  |   |
| 1988 | 1:24,000  |   |
| 1994 | 1:24,000  |   |

SITE RECONNAISSANCE  
February 8, 2016

## **5.0 SITE RECONNAISSANCE**

A visit to the Property and its vicinity was conducted by Mr. Scott Edblad and Jason Stagno on September 14, 2015. Access to the Property was provided by the on-site personnel, Mr. Tom Streight. Stantec was accompanied by Mr. Streight during the Property visit. Figure 2 provides information about the Property and adjoining properties and the location of potential areas of environmental concern. Photographs collected during the Property visit are included in Appendix A.

### **5.1 SITE RECONNAISSANCE METHODOLOGY**

The Site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions that may indicate the presence of a REC. The Property reconnaissance was conducted on foot and Stantec utilized the following methodology to observe the Property:

- Traverse the outer Property boundary.
- Traverse transects across the Property.
- Traverse the periphery of all structures on the Property.
- Visually observe accessible interior areas expected to be used by occupants or the public, maintenance and repair areas, utility areas, and a representative sample of occupied spaces.

Weather conditions during the visit to the Property were clear and sunny. There were no weather-related Property access restrictions encountered during the reconnaissance visit.

### **5.2 GENERAL DESCRIPTION**

|  |   |
|--|---|
| <b>Property and Area Description:</b>                                | The Property is located in an urban development. Surrounding properties include combination of vacant land and residential properties.  |
| <b>Property Operations:</b>  | The Property is a natural gas processing facility and is a part of an active landfill which currently accepts non-hazardous solid waste.  |
| <b>Structures, Roads, Other Improvements:</b>                        | The structures present on the Property include multiple trailers, two high voltage buildings, flaring station, condensate processing facility, and refrigeration exchange skid area. The surface is covered partly by asphalt and partly unpaved. |
| <b>Property Size (acres):</b>  | 3.0   |
| <b>Estimated % of Property Covered by Buildings and/or Pavement:</b> | 10  |
| <b>Observed Current Property Use/Operations:</b>                     | Landfill gas processing facility.   |

| <b>Observed Evidence of Past Property Use(s):</b> | None observed.            |
| <b>Potable Water Source:</b>                      | Glendale Water and Power. |
| <b>Electric Utility:</b>                          | Glendale Water and Power. |

**5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS**

The following table summarizes Stantec's observations during the Property reconnaissance.

| <b>Observations</b>   | <b>Description/Location</b>  |
|---|--|
| <b>Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14):</b> | Hazardous substances observed on the Property included waste oil, antifreeze, hydrochloric acid, compressor oil, and diesel. All substances appeared to be stored appropriately.   |
| <b>Drums (≥ 5 gallons):</b>   | Miscellaneous drums storage, southeast of the Property (with or without secondary containment): <ul style="list-style-type: none"> <li>• 8x55-gal magnasol</li> <li>• 2x55-gal magnafloc</li> <li>• 5x55-gal pacemaker oil</li> <li>• 55-gal aluminum chloride</li> <li>• 2x55-gal antifreeze, cleaning solvent</li> <li>• 55-gal sorbent waste storage drum</li> <li>• 55-gal oil storage drums</li> <li>• 16-gal hydrochloric acid storage drum</li> </ul> |
| <b>Strong, Pungent, or Noxious Odors:</b>   | None detected.   |
| <b>Pools of Liquid:</b>   | None observed.   |
| <b>Unidentified Substance Containers:</b>   | None observed.   |
| <b>PCB-Containing Equipment:</b>  | None observed.   |
| <b>Other Observed Evidence of Hazardous Substances or Petroleum Products:</b>                 | None observed.   |

**5.4 EXTERIOR OBSERVATIONS**

Stantec made the following observations during the site reconnaissance of exterior areas of the Property and/or identified the following information during the interview or records review portions of the assessment:

**PHASE I ENVIRONMENTAL SITE ASSESSMENT

INTERVIEWS  
February 8, 2016

## **6.0 INTERVIEWS**

Stantec conducted interviews with the following individuals:

| <b>Name and contact information</b> | <b>Relationship to Property</b> | <b>Key findings:</b>   |
|-------------------------------------|---------------------------------|--|
| Tom Streight                        | On-site personnel               | The personnel provided information on the existing chemical storage on the Property. |

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

EVALUATION  
February 8, 2016

## **7.0 EVALUATION**

This section provides a summary overview of or Findings, Opinions, and Conclusions.

### **7.1 FINDINGS AND OPINIONS**

Information gathered from interviews, reviews of existing data review, and a property inspection was evaluated to determine if RECs are present in connection with the Property. Based on this information, Stantec made the following findings and developed the following opinions.

**Finding 1:** Numerous drums and poly tanks containing various hazardous chemicals and/or waste oil were observed on the Property.

**Opinion 1:** Storage of petroleum hydrocarbons and hazardous chemicals at a facility is considered a REC. However, during the site reconnaissance, Stantec did not observe evidence of leaks or spills at the Property. Stantec also observed some drums containing hazardous chemicals which were stored on secondary containment.

**Finding 2:** The Property is a natural gas processing facility and is a part of an active landfill.

**Opinion 2:** The landfill receives petroleum hydrocarbons and other non-hazardous waste, and is under regulatory agency oversight for groundwater monitoring. Therefore, the presence of a landfill as part of the Property is considered as a REC.

**Finding 3:** Three ASTs (6,000-gal, 4,885-gal and 4,561-gal) storing diesel were observed approximately 500 feet northeast from the Property. No secondary containment was observed.

**Opinion 3:** Since these ASTs are not on the Property and no violations were reported, the ASTs are considered as an item of note for the Property but not a REC.

**Finding 4:** The EDR database reported presence of a 500-gal UST with regular unleaded gasoline used for motor vehicle fuel at the landfill.

**Opinion 4:** Since no spills, leaks or violations were reported and the reported UST is not on the Property, it is considered as an item of note for the Property but not a REC.

### **7.2 DATA GAPS**

The federal AAI rule [40 CFR 312.10(a)] and ASTM E1527-13 identify a “data gap” as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the Environmental Professional or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
 BIOGAS RENEWABLE GENERATION PROJECT

| <b>Other Data Gaps:</b>  | None.             |

**7.3 CONCLUSIONS**

Stantec completed this Phase I ESA of the proposed project site for power generation located at 3001 Scholl Canyon Road, Glendale, California 91206 (the “Property”), on behalf of City of Glendale (the “Client”). The work was performed in accordance with Stantec’s proposal and terms and conditions dated August 25, 2015. City of Glendale (the “User”) has been designated as the User of this report.

The Phase I ESA was conducted in conformance with USEPA Standards and Practices for AAI, 40 CFR Part 213 and the requirements of ASTM Designation E 1527-13, except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM practice are described in Section 2.3 and 8.2. The purpose of this Phase I ESA was to evaluate the current and historical conditions of the Property in an effort to identify RECs and HRECs in connection with the Property.

The Property which is proposed for construction is comprised of an approximately 2.2-acre landfill gas processing facility within the Scholl Canyon Landfill and a pipeline corridor extending approximately 2/3 mile to the west of the landfill. The Property is located approximately one half mile north of the 134 Freeway on Scholl Canyon Road in the City of Glendale, Los Angeles County, California. The purpose of the proposed project development is to beneficially utilize methane-rich renewable LFG as fuel to generate electricity (13 megawatts). In addition, 2/3 mile of natural gas pipeline will be constructed to connect the facility to the existing Southern California Gas Company pipeline system located at the eastern end of Scholl Canyon Drive. The Scholl Canyon Landfill is also reportedly identified as 7721 North Figueroa Street, Los Angeles, California 90047. Surrounding properties include vacant land, landfill (active and inactive) and residential properties.

The following items of note were identified during this ESA:

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

EVALUATION  
February 8, 2016

- Three ASTs (6,000-gal, 4,885-gal and 4,561-gal) storing diesel were observed approximately 500 feet northeast of the Property. No secondary containment was observed. Since these ASTs are not located on the Property and no violations/leaks/spills were reported, the ASTs are considered as an item of note for the Property but not a REC.
- The EDR database reported presence of a 500-gal UST with regular unleaded gasoline used for motor vehicle fuel at the landfill. Since no spills, leaks or violations were reported and the reported UST is not on the Property, it is considered as an item of note for the Property but not a REC.

Stantec performed this Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the Property. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed the following RECs in connection with the Property:

- During the site reconnaissance, Stantec observed numerous drums and poly tanks which stored various hazardous chemicals and/or waste oil on the Property. Storage of petroleum hydrocarbons and hazardous chemicals at a facility is considered a REC. However, during the site reconnaissance, Stantec did not notice evidence of leaks or spills at the Property. Stantec also observed that some drums containing hazardous chemicals were stored on secondary containment; and
- The Property is a natural gas processing facility and is a part of an active landfill, and as such, there is a possibility of release of gas emissions including methane. The landfill was historically reported to accept some contaminated soils, and groundwater is being monitored for impacts from VOCs. Therefore, presence of a landfill is considered as a REC. However, no buildings were observed on the Property during the site reconnaissance which eliminated the current possibility of indoor air quality issues and it was reported that the landfill currently accepted only nonhazardous waste, potentially limiting the types of hazardous gas emissions from the landfill.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

NON-SCOPE CONSIDERATIONS  
February 8, 2016

## **8.0 NON-SCOPE CONSIDERATIONS**

No ASTM E1527-13 non-scope services were performed as part of this Phase I ESA with the following exceptions:

### **8.1 LEAD-BASED PAINT**

Concern for lead-based paint (LBP) is primarily related to residential structures. The EPA's Final Rule on Disclosure of Lead-Based Paint in Housing (40 CFR Part 745) defines LBP as paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram per square centimeter or 0.5 percent by weight.

The risk of lead toxicity in LBP varies based upon the condition of the paint and the year of its application. The U.S. Department of Housing and Urban Development (HUD) has identified the following risk factors:

The age of the dwelling as follows: maximum risk is from paint applied before 1950.

There is severe risk from paint applied before 1960.

There is moderate risk from deteriorated paint applied before 1970.

There is slight risk from the paint that is intact but applied before 1977.

The condition of the painted surfaces.

The presence of children and certain types of households in the building.

Previously reported cases of lead poisoning in the building or area.

Samples of suspect LBP were collected for laboratory analysis of lead and will be submitted to the Client in a separate report.

### **8.2 ASBESTOS**

Asbestos can be found in many applications, including sprayed-on or blanket-type insulation, pipe wraps, mastics, floor and ceiling tiles, wallboard, mortar, roofing materials, and a variety of other materials commonly used in construction. The greatest asbestos-related human health risks are associated with friable asbestos, which is ACM that can be reduced to powder by hand pressure. Friable asbestos can become airborne and be inhaled, and has been associated with specific types of respiratory disease. The manufacturing and use of asbestos in most building products was curtailed during the late 1970s. Stantec makes no warranty as to the possible existence or absence of inaccessible materials or to their evaluation with respect to asbestos content.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
BIOGAS RENEWABLE GENERATION PROJECT  
3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

NON-SCOPE CONSIDERATIONS  
February 8, 2016

Samples of suspect ACM were collected for laboratory analysis of asbestos and will be submitted to the Client in a separate report.

### **8.3 INDOOR AIR QUALITY**

No issues regarding air quality were noted.

### **8.4 RADON**

Radon is a colorless, tasteless radioactive gas with an EPA-specified action level of 4.0 PicoCuries per liter of air (pCi/L) for residential properties. Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is primarily associated with its rate of accumulation within confined areas near or in the ground, such as basements, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993).

Stantec reviewed regional data published by the EPA (<http://www.epa.gov/radon/zonemap.html>) on average indoor radon concentrations in the vicinity of the Property.

| <b>EPA Radon Zones (w/Average Measured Indoor Radon concentrations)</b>                     |   |                                       |
|---|---|---------------------------------------|
| <b>Zone 1 – High<br/>(&gt;4.0 pCi/L)</b>  | <b>Zone 2 – Moderate<br/>(2 to 4 pCi/L)</b> | <b>Zone 3 – Low<br/>(&lt;2 pCi/L)</b> |
|   | Yes   |                                       |
| <b>Normally-occupied sub grade areas (i.e. basement apartments, offices, stores, etc.)?</b> |   |                                       |
| No buildings present on the Property.   |   |                                       |

The Property is located in Zone 2 and is considered to have moderate potential for radon. To determine Property-specific radon levels a radon survey would have to be conducted. However, because the Property does not have any buildings, further investigation of indoor radon issues does not appear to be warranted.

### **8.5 FLOOD ZONES**

According to the Physical Setting summary portion of the EDR report, the Property is not located within a 500-year or 100-year flood plain. The nearest Surface Water is the Eagle Rock Reservoir, located south of the Property.

### **8.6 WETLANDS**

Wetlands cannot be definitively identified through visual observation alone. Defensible wetland delineations require taxonomic classification of property vegetation, an investigation into the surface and subsurface hydrology of the property, and identification of hydric soils. This level of delineation is outside of the scope or work for this assessment. However, Stantec reviewed US Fish and Wildlife Service

**PHASE I ENVIRONMENTAL SITE ASSESSMENT  
 BIOGAS RENEWABLE GENERATION PROJECT  
 3001 SCHOLL CANYON ROAD GLENDALE, CALIFORNIA 91206**

NON-SCOPE CONSIDERATIONS  
 February 8, 2016

National Wetland Inventory maps and readily available USDA Soil Survey reports. Information from these sources is summarized below.

**Potential Wetlands Observed on Property:** None Observed

**New Development Planned for Property:** Yes

**Wetland Inventory Maps**

|  |               |
|--|---------------|
| <b>Map Quadrangle Name</b>                       | Pasadena      |
| <b>Wetlands Depicted on Property:</b>            | None depicted |
| <b>Wetlands Depicted on Adjoining Properties</b> | None depicted |

**Soil Survey Data**

|  |   |
|--|---|
| <b>Soil Survey Report Name and Date:</b>           | STATSGO: State Soil Geographic Database |
| <b>Hydric Soils Depicted in Property Vicinity:</b> | None Depicted                           |

Based on the above documents and the field observations, a wetland does not appear to be present at the Property.

**8.7 PESTICIDES**

No documentation of commercial on-site use of agricultural chemicals (e.g., pesticides, insecticides, fertilizers or herbicides) was discovered during this ESA. Stantec did not identify any apparent agricultural chemical processing areas, such as crop dusting airfields, bulk mixing areas; or repacking, transfer, or agricultural chemical storage areas in the aerial photographs that were reviewed during this ESA.

**8.8 DRY-CLEANING OPERATIONS**

No existing dry-cleaning operations were observed at the Property. The historical records review did not list former dry-cleaning operations on the Property.

Appendix B  
STANTEC RESUMES  
February 8, 2016

**Appendix B  
STANTEC RESUMES**

Anuya has four years of experience in the environmental industry, including project and task management; environmental site assessments; hazardous material assessments; remedial investigations; remedial evaluations and installations; soil, soil vapor, and air sampling; water sampling (wastewater, groundwater, and surface water); National Environmental Policy Act (NEPA)/California Environmental Quality Act (CEQA); Phase I and Phase II environmental assessment and remediations; and workplans, proposals, and reports. Her remediation background includes operating soil vapor extraction (SVE) with granular activated carbon; thermal catalytic oxidizer; and ozone sparge systems designed to target petroleum hydrocarbon and volatile organic compound impacts to groundwater, subsurface soil, and soil vapor. Anuya's site assessment background includes drilling, well abandonment and redevelopment, soil and water sampling, soil vapor sampling and indoor air/intrusion (Summa canisters and tedlars), excavations, underground storage tank (UST) removals, and installing groundwater and soil vapor wells. Her regulatory compliance and NEPA/CEQA document preparation includes evaluating air quality, greenhouse gas emissions, traffic/transportation, energy, utilities, and recreational project impacts. Anuya has technical knowledge of quantifying emissions for linear (i.e. pipelines and roadways) projects using CalEEMod emission model, as well as the USEPA statistical analysis software, ProUCL that is used to compute rigorous statistics to help make accurate decisions at a polluted site.

## PROJECT EXPERIENCE

### **Environmental Site Assessments Phase I, II, III**

Limited Visual Site Investigation, Phase I and II  
Environmental Site Assessments, Los Angeles,  
Riverside, Orange, and Ventura Counties, California  
(Project Engineer)

*Anuya performed a limited visual site investigation, Phase I and II Environmental Site Assessments and site characterization assessments for several clients, including medical groups, major retail tire facilities, residential developers, commercial developers, and banks. Properties included multi-story occupied and vacant buildings, vacant lots, industrial and residential properties, and automotive maintenance facilities.*

### **Environmental Site Remediation**

Soil, Soil Vapor, and Groundwater Remediation, Los  
Angeles and Orange Counties, CA (Project  
Engineer)

*Anuya helped with permitting and operation and maintenance of soil vapor extraction, air sparge, and ozone injection systems to remediate impacted soil, soil vapor, and groundwater for property development companies (commercial) and an Orange County city. Sites included volatile organic compounds, chlorinated solvents, and hydrocarbon impacts.*

# Anuya Sawant

Engineering Project Specialist

---

## Soil, Soil Vapor, and Groundwater Remediation Systems Operations and Maintenance, Los Angeles and Orange Counties, CA (Staff Engineer)

*Anuya conducted operation and maintenance activities on soil vapor extraction and ozone injection systems. She conducted daily/weekly field monitoring, air sampling, and monthly data collection to maintain air quality permits compliance.*

## California Department of Transportation (Caltrans), Los Angeles and Ventura Counties, California (Project Engineer)

*Anuya performed soil sampling at various locations, including Lebec and Ojai maintenance yards and I-101 freeway in Ventura and Los Angeles Counties. She evaluated the soil for total petroleum hydrocarbons, volatile organic compounds, and metals.*

## Former Retail Petroleum Station Assessment and Remediation, Yorba Linda, California (Staff Engineer)

*Anuya is currently helping manage permitting, installation, and operation and maintenance of a soil vapor extraction and ozone sparge remediation system to redevelop a former retail petroleum station. The site is impacted with petroleum hydrocarbons and volatile organic compounds in subsurface soils, soil vapor, and groundwater. She is documenting weekly operation and maintaining thermal catalytic oxidizer granular activated carbon SVE and ozone sparge remediation system; permitting (City of Yorba Linda, WDR, and Air Quality Management District); collecting monthly soil vapor samples; collecting quarterly groundwater samples; and preparing quarterly groundwater and operation and maintenance reports and yearly progress reports submitted to the Orange County Health Care Agency and the City of Yorba Linda.*

## Soil and Soil Vapor Remediation, Harbor City, California (Staff Engineer)

*Anuya conducted weekly operation and maintenance of the soil vapor extraction system and collected soil vapor samples at a dry cleaner facility. The site consisted of volatile organic compounds, chlorinated solvents, and hydrocarbon-impacted properties. Anuya prepared quarterly operation and maintenance reports.*

## Target Store Assessment and Remediation, Anaheim, California (Staff Engineer)

*Anuya helped technically execute the remediation of a multi-million dollar project at a former Target Store facility. Source areas included an automotive service station and dry cleaner business that formerly operated at the property. Remediation activities included underground storage tank removal, soil excavation, and soil vapor extraction. Anuya composed quarterly groundwater and operation and maintenance reports; conducted weekly/daily operation and maintenance of the soil vapor extraction system with carbon vessels; and collected soil vapor samples monthly. This site received a no further action letter and was closed by the lead regulatory agency.*

## Oil & Gas

### Vinvale Terminal Groundwater Monitoring and Remediation, Southgate, California (Project Engineer)

*The project site is one of the largest fueling distribution terminals on the west coast with daily simultaneous operations. Anuya participates in the groundwater monitoring and sampling activities on a quarterly basis.*

### Positional Letter Report, Tesoro (Former BP ARCO) Line 216, Inglewood, California (Project Engineer)

*Anuya helped prepare a Positional Letter Report that recommended an approach, strategy, and response to a letter issued by the Los Angeles Regional Water Quality Control Board. The letter addressed environmental conditions reportedly identified along the Natural Gas Pipeline 216, located on Hollywood Park Racecourse in Inglewood, California.*

### Air Quality Study, Vintage Development Project, Kern County, California (Project Engineer)

*Anuya helped prepare a Positional Letter Report that recommended an approach, strategy, and response to a letter issued by the Los Angeles Regional Water Quality Control Board. The letter addressed environmental conditions reportedly identified along the Natural Gas Pipeline 216, located on Hollywood Park Racecourse in Inglewood, California.*

\* denotes projects completed with other firms

# Anuya Sawant

Engineering Project Specialist

---

## Tesoro (Former BP ARCO) Gas Station Workplan Reports (Project Engineer)

*Anuya prepared workplans and well abandonment reports for various gas station sites to expedite the remediation process and proceed towards closure.*

## Underground Storage Tank Removal, Tesoro Refining and Marketing, Marina Del Rey, Newbury Park, Long Beach, and Santa Barbara, California (Staff Engineer)

*Anuya provided technical support and field support to remove and excavate an underground storage tanks at various Tesoro service stations in Marina Del Rey, Newbury Park, Long Beach, and Santa Barbara. The project removed the tank, monitored air quality in accordance with Rule 1166 Air Monitoring, collected a soil sample during UST removal/upgrades, segregated impacted soil, and backfilled the excavation pit.*

## Baseline Studies

### Chevron-Branded Facility, Bakersfield, California (Project Engineer)

*Anuya prepared a Baseline Site Summary Report for a Chevron-Branded Facility. She prepared the summary in accordance with established Chevron Environmental Management Company (CEMC) guidelines for Property Transfer: Health, Environmental, and Safety Due Diligence Guidelines for Property Transfer for Service Stations.*

### Occidental of Elk Hills Carbon Dioxide Enhanced Oil Recovery and Sequestration Project, Kern Counties, California (Engineering Associate)

*Anuya helped repair an equivalent document to an Environmental Impact Report with several technical studies to construct and operate a carbon dioxide (CO<sub>2</sub>) enhanced oil recovery (EOR) system at a 48,000-acre active oil field. The environmental document met the content and format requirements of the California Energy Commission, Department of Oil Gas and Geothermal Resources; and Kern County Planning and Community Development Department. Anuya evaluated potential environmental impacts created by the construction and operation of the CO<sub>2</sub> EOR system (specifically for population), and if warranted, provided mitigation measures to address identified impacts.*

## Multi-Unit / Family Residential

ProUCL software for statistical calculations and analysis to support Expert Report, Los Angeles, California (Project Engineer)

*As part of statistical calculations, Anuya evaluated the analytical data to establish the type of distributional assumptions that best fit the data. To make this determination, Anuya utilized the ProUCL 5.0 software program provided by the USEPA and provided the upper confidence limit of the mean to help determine contribution of the site and the neighboring site to toxic metals contamination. The program allowed normality or lognormality data testing using the Shapiro-Wilk W test.*

With more than 30 years experience in environmental consulting, engineering, and construction fields, Steve has been involved with all aspects of regional and site-specific environmental investigations throughout the southwestern US, including CERCLA/SARA, RCRA, NEPA, and CEQA regulated projects. His experience includes remedial investigations/feasibility studies; risk assessments; soil, soil vapor, and groundwater assessments; contaminant fate and transport determinations; and contaminant delineation and treatment or removal. Other activities include watershed and wetlands investigations; siting investigations; forensic chemical investigations; and investigations using various investigative techniques.

Steve has worked with a range of commercial and industrial client sectors, with focus on construction related projects. His experience includes military/aerospace; semiconductor manufacturers; transportation (rail & vehicle); healthcare; petroleum (upstream, midstream, and downstream); property management, investment, development; and legal clients.

Steve conducts independent and peer review of documents for Quality Assurance/Quality Review requirements. QA/QC review is performed for a variety of client projects, including due diligence; soil, soil vapor, and groundwater assessments; compliance; O&M and remedial projects; and CEQA/NEPA projects. His experience with contaminants includes petroleum hydrocarbons; volatile organic compounds; semi-volatiles organics (including pesticides and PCBs); metals; radionuclides; and others.

Steve has participated as an expert for the California Board of Geology for determination of pass point criteria for multiple certifications.

## EDUCATION

BA, Architecture, University of North Carolina, Charlotte, North Carolina, 1979

MS, Geology, Arizona State University, Tempe, Arizona, 1988

8-Hour Health & Safety Annual Certification Update, OSHA, Los Angeles, California, 2014

## PROJECT EXPERIENCE

### **Aboveground and Underground Storage Tank Management**

Underground Storage Tank Program Management for Major Oil Company Portfolios, Various Locations, California, Arizona, Nevada (Portfolio Manager)  
*Steve managed regional portfolios of site assessment and remediation projects at gasoline-dispensing facilities across the southwestern US. He was responsible for planning and implementing projects involving UST system closure, site assessment, remediation system design, construction management, operation-and-maintenance, and risk-based corrective action analysis. Tasks included collection of soil, soil vapor, and groundwater samples during assessments, UST removal activities, and after releases have been discovered, corrective action plan preparation, agency liaison, negotiations, and reporting, and remediation oversight.*

\* denotes projects completed with other firms

# Steven Brady PG, CEG, CHG

## Managing Principal Hydrogeologist Technical Intro

---

*The sites were located in a variety of geologic terrains ranging from fractured bedrock to alluvium, and the depth to groundwater ranged from a few feet to several hundred feet. Contaminants typically included separate-phase hydrocarbons (SPH) and dissolved-phase motor fuel constituents. Remediation technologies used to clean up the various leaking UST sites included excavation, ozone sparging, air sparging, biosparging, soil vapor extraction, bioventing, groundwater pump-and-treat, dual phase extraction, high vacuum dual phase extraction, and aboveground bioreactors (to treat higher concentration liquid effluent).*

### **Agriculture**

#### **Agriculture Site Assessment, Monitoring, and Remedial Activities\*, Santa Barbara, California (Project Manager)**

*Steve served as the project manager for the soil and groundwater site assessment, quarterly groundwater monitoring, and oversight of remedial activities at an agricultural site. The site encompasses more than 60 acres, with approximately 20 acres within the coastal zone of Santa Barbara. In addition to releases from pesticide and chemical storage areas, diesel boilers, and fuel tanks, large portions of the site consisted of undocumented landfills. An assessment of soil and groundwater was performed for the site, and the extent of both soil and groundwater contamination due to releases of fuels and chemicals was determined. Calculations of groundwater gradient and rates of contaminant flow in the subsurface were performed. Remedial action plans were developed and implemented to remove landfills from the site.*

#### **Agricultural Packing Plant SWPPP Development and Compliance Project\* (Project Manager)**

*As project manager, Steve was responsible for site facility audits to evaluate potential discharge locations, development of best management practices recommendations, and development of a Storm Water Pollution Prevention Plan for submission to the lead regulatory agency.*

### **Airports & Aviation**

#### **John Wayne Airport Soils and Groundwater Investigation\* (Project Geologist)**

*Steve conducted characterization, delineation, and remediation of hydrocarbon and volatile organic contaminated soils and groundwater at Orange County's John Wayne Airport. Duties included development of site-specific work plans and health and safety plans; permitting, drilling and sampling soil borings; installation of groundwater monitoring wells; installation, maintenance, and monitoring of a groundwater treatment system; compilation and analysis of analytical results; and preparation of monthly and quarterly reports.*

#### **Norton Air Force Base Remedial Investigation\***

*Steve served as project manager for a fast-track remedial investigation supporting RCRA closure of Norton Air Force Base NPL site in San Bernardino, California. Initial tasks consisted of assessment and demolition of two hazardous material storage facility areas at the Base. Part of the DRMO, these two storage facilities received all hazardous materials generated at the Base. A site-specific Work Plan, Chemical Data Quality Management Plan, and Health and Safety Plan were developed and approved by the U.S. Army Corps of Engineers, U.S. Air Force, and the California EPA. Field activities consisted of wipe sampling of facility surfaces prior to demolition, demolition and salvage of building materials, drilling 33 subsurface borings, and collecting concrete core, asphalt, and subsurface materials to assess conditions at the site. Demolition of the buildings was completed in one day and salvage operations were performed concurrent with the site assessment. A report was developed detailing activities and recommendations, and Certification of Closure was performed as a final task.*

#### **March Air Force Base Site 17 Engineering Evaluation/Cost Analysis\* (Deputy Project Manager)**

*Steve served as deputy project manager for an Engineering Evaluation/Cost Analysis (EE/CA) for remedial actions at March Air Force Base Site 17, an abandoned pool which was backfilled with hazardous waste. Duties consisted of research, analysis, and generation of a report which includes development of scope and schedule for removal action objectives adhering to statutory limits for removal actions; identification and analysis of removal action alternatives, including effectiveness, implementability, and cost; comparative analysis of remedial alternatives; and recommendations for removal actions.*

\* denotes projects completed with other firms

---

### Edwards Air Force Base and Phillips Laboratory Closure\* (Project Manager)

*Steve managed an expedited remedial investigation under the Installation Restoration Program for closure of Edwards Air Force Base, Phillips Laboratory OU4, Sites 7 and 167, the 48 acre beryllium storage and test firing range for the Phillips Laboratory. Site 7 was used to stockpile beryllium-contaminated soils after explosions destroyed buildings on the Site. Site 167 received beryllium fallout from test firings of rocket engines. Duties included development of the work, sampling and analysis, and Health and Safety Plans, which were reviewed and approved by the U.S. Army, the U.S. Air Force, and the U.S. EPA.*

### March Air Force Base, Hawes Site Closure\*, San Bernardino County, California (Project Manager)

*Steve managed a remedial investigation under the Installation Restoration Program for closure and property transfer of March Air Force Base, Hawes Site in San Bernardino County, California. The Hawes Site consists of a former auxiliary airport and radio tower, and encompasses approximately 305 acres of federally endangered species habitat. Initial duties included an endangered species survey of the Site, development of an endangered species Conservation Plan, and a geophysical survey of the Site. The Conservation Plan was reviewed and approved by the U.S. Fish and Wildlife Service. Site specific Work Plans, Sampling and Analysis Plans, and Health and Safety Plans were then developed for the Site and approved by the U.S. Army Corps of Engineers, the U.S. Air Force, the U.S. EPA, the California EPA, and the Regional Water Quality Control Board. The planning documents detailed protection of endangered species and assessment of potential contamination and closure of fuel and waste oil USTs, removal of septic tanks and leach fields, removal of underground tanks, geophysical logging and closure of the onsite water supply well, removal of numerous utility vaults, demolition and removal of a storage building, removal of scrap and debris from the Site, and asbestos abatement of the bunker and bunker area.*

### Brownfield Investment Property Fast-Track Investigation\*, Santa Monica, California (Project Manager)

*Steve served as project manager for a fast-track investigation on a Brownfield investment property that was formerly a portion of the original McDonnell Douglas Aircraft manufacturing facility in Santa Monica. Work plans were developed and approved by the client, property owner, and lender. Soil gas surveys and soil sampling assessments were performed to characterize the nature, levels, and potential sources of contamination at the site. The entire project was completed within three weeks and recommendations were provided to the client aimed at limiting future liability. Negotiation support was provided to assist in obtaining funding.*

### Former Military/Aerospace Manufacturer Remedial Oversight\* (Project Manager)

*Steve performed remedial oversight at a former military/aerospace manufacturer in Santa Ana, California. Extensive quantities of chlorinated solvents, metals, and fuels were released into subsurface soils and groundwater by a past military/aerospace tenant. Numerous remedial actions have been performed at the site. A summary report was developed detailing the nature and levels of contamination in the soil and groundwater aquifers, a summary of the prior assessments and remedial activities performed at the site, an opinion regarding the extent of contamination in the subsurface and different water-bearing zones, and an opinion regarding the adequacy of the former tenants proposed assessment and remedial activities. Assistance with negotiations with the tenant and the RWQCB regarding site remediation was provided.*

### Municipal Airports Fast-Track Compliance Audits and Evaluations, Various Locations (Project Manager)

*Steve served as project manager for the fast-track compliance audits and historical evaluations of seven municipal airports in Southern California, Washington, and Pennsylvania. The project involved agency file and database research, historical document research, and site facility audits to determine compliance status with appropriate regulations, as well as generation of summary reports aimed at limiting future liability for the new operators at the airports.*

\* denotes projects completed with other firms

# Steven Brady PG, CEG, CHG

## Managing Principal Hydrogeologist Technical Intro

---

### **Condition Assessments**

#### **Cave Creek Groundwater Mapping and Siting\* (Project Manager)**

*Steve conducted mapping and siting of multiple groundwater production wells in Arizona for an assured water supply for the City of Cave Creek and in support of a proposed golf course and country club development. Well locations were selected and logging and evaluation of test boring conducted to more than 1,000-foot bgs. Screen depths were selected for the wells and oversight of well construction was completed.*

#### **Seismograph Station Siting\* (Project Manager)**

*Steve conducted siting of multiple Seismograph Station arrays to locate significant, active fault segments in Central and Southern California meeting specific lithological criteria. The seismograph arrays were designed to obtain near-field seismic effects. The project involved review of numerous geologic and geotechnical reports, evaluation of data from existing seismograph arrays, field mapping and site reconnaissance, contact with property owners to obtain lease permits, and generation of a report detailing conclusions and recommendations.*

#### **Pacific Palisades Landslide and Contamination Investigation\*, Los Angeles, California (Project Manager)**

*Steve served as the project manager for the geohydrologic and environmental portions of an investigation to evaluate landslide potential and potential soil and groundwater contamination for a proposed force main line in the Pacific Palisades for the City of Los Angeles, Geotechnical Services Division. Numerous ancient and historic landslides occur in the Pacific Palisades, many of which have activated due to the presence of high groundwater. The study required review and compilation of prior geotechnical and environmental data; geologic field mapping and surveying; geotechnical and environmental drilling, sampling, and chemical and physical analysis of soil and groundwater; review of historical and site-specific oblique, vertical, and infrared aerial photographs; data compilation and analysis; determination of groundwater sources; and map and report preparation with evaluation of alternatives and recommendations.*

#### **Methane and Leachate Collection Systems Investigation\* (Project Manager)**

*An investigation of the methane and leachate collection systems operational at a golf and country club, on the site of a former landfill in the Santa Monica Mountains, was performed. An extensive review of available landfill and facility construction and monitoring data was conducted, as well as research on documentation available from the RWQCB, the Department of Fish & Game, and the US Army Corps of Engineers. Site and facility audits were performed to evaluate the present condition of the methane, gas condensate, and leachate collection systems. Conclusions and opinions were provided to the client concerning the operation, maintenance, and adequacy of the collection systems. Mitigative measures were recommended to the client aimed at limiting offsite migration of methane and improving water quality downgradient from the landfill.*

#### **UK and US Golf Course UST Compliance\* (Project Manager)**

*Steve served as project manager for a compliance status summary of the underground storage tanks at 250 client-owned golf courses throughout the UK and US. The project involved review of tank data from the various courses and management/oversight of the development of a database that contained pertinent details including quantity of USTs and aboveground storage tanks, installation dates, and other tank/tank appurtenance information. The database allowed for searches and sorting to determine compliance with the US-EPA UST compliance deadline.*

\* denotes projects completed with other firms

# Steven Brady PG, CEG, CHG

Managing Principal Hydrogeologist Technical Intro

---

## **Environmental Site Assessments Phase I, II, III**

Phase I ESAs and Liability Evaluation, Confidential Client, Multiple Foundries, Southern California

*Steve was part of the Stantec team that completed concurrent Phase I ESAs and an overall evaluation of potential pollution liability for multiple foundries. The projects were completed during a business purchase transaction whereby the properties and their associated environmental liability would become the responsibility of the new land owner. At the time of evaluation, the foundry sites were each in various stages of environmental assessment and remediation, and under regulatory oversight by the Los Angeles Regional Water Quality Control Board (LARWQCB). The liability evaluations consisted of assessing the potential remaining environmental assessment and remediation that may be required by the LARWQCB, and development of potential costs associated with obtaining regulatory closure. Potential future environmental liabilities associated with purchasing the impacting properties and the foundry business operations were also included as they might pertain to the purchase of the business and its assets/liabilities. Because the projects were completed during the pre-transaction due diligence period, the projects were coordinated and completed within an expedited timeframe by a team of Stantec professionals across multiple offices.*

Healthcare and/or Environmental Site Assessment Phase I, II, III, Various Locations, California, Oregon, and Washington (Project Manager)

*Steve managed numerous Phase I, Phase II, and remedial projects associated with property transfer and development for a major health care provider throughout California and the Pacific Northwest. Numerous specialized assessments have been conducted for various existing or planned hospitals, medical office buildings, and support facilities. These investigations have involved drilling and sampling of soil, soil vapor, and groundwater utilizing various techniques; installation and sampling of monitoring wells and calculated rates and direction of groundwater flow; location of contaminant sources; evaluation of facility usage, and Risk Assessments to document protection of human health for facility users and construction workers. Remediation of soil, soil vapor and groundwater have been performed, including underground storage tank removal, contaminated soil removal and treatment, and evaluation of best available technologies for remedial actions. Project support has involved negotiations with regulatory agencies, legal counsel, and property owners.*

Retail Tire Facility and/or Environmental Site Assessment Phase I, II, III (Project Manager)

*Steve served as Project Manager for numerous combined Phase I and Phase II environmental site assessments, groundwater monitoring, remedial actions, and reporting projects for a major retail tire facility. Projects generally included assessing the extent of contamination associated with hydraulic lifts, USTs, and other activities associated with operating a tire replacement facility, as well as remediating the extent of assessed contamination and negotiating cleanup levels with the local enforcement agencies.*

Multiple Combined Phase I and II ESAs (Project Manager)

*Steve served as Project Manager for numerous combined Phase I and Phase II environmental site assessments, groundwater monitoring, remedial actions, and reporting projects for a major retail tire facility. Projects generally included assessing the extent of contamination associated with hydraulic lifts, USTs, and other activities associated with operating a tire replacement facility, as well as remediating the extent of assessed contamination and negotiating cleanup levels with the local enforcement agencies.*

Seven Oaks Dam Mitigation Property Environmental Assessment\*, Redlands, California (Project Manager)

*Steve served as the project manager for an environmental assessment of the 64-acre Seven Oaks Dam Mitigation property in the Santa Ana River Flood Channel, Redlands. The project consisted of a Phase I level site assessment and soil gas survey. The project involved research, historic air photo analysis, site reconnaissance and mapping, installation of soil gas monitoring wells, soil-gas sampling for volatile organics, data compilation and analysis, and preparation of a report detailing activities and conclusions.*

\* denotes projects completed with other firms

# Steven Brady PG, CEG, CHG

## Managing Principal Hydrogeologist Technical Intro

---

### Nike Site Environmental Assessment and Closure\*, Puente Hills, California (Project Manager)

*Steve served as the project manager for an environmental assessment aimed at gaining site closure for a 55-acre Nike missile battery located in the Puente Hills of Los Angeles County. The site consisted of three areas on two separated ridge tops; the administration area and launch area (also known as the Lower Site) were on one of the ridge tops, and the control area (also known as the Upper Site) was located on an adjacent ridge top. The Nike Site contained aboveground and underground storage tanks, a vehicle maintenance shop, underground missile storage and launch facilities, aboveground missile assembly, fueling, and testing facilities, surveillance facilities, barracks, and an underground network of tunnels. Duties consisted of research, negotiations with the Cal-EPA, development of Work Plans and Health and Safety Plans, geophysical and radiation surveys, drilling and sampling soil and bedrock, and sampling for asbestos containing building materials. Reports were developed detailing options and recommendations for property transfer of a complex military site.*

### Los Angeles and Ventura Counties Property Investigations and Transfers (Project Manager)

*Steve served as project manager for commercial and industrial property transfers and litigation support in Los Angeles and Ventura Counties. Numerous specialized assessments have been conducted for various financial institutions. These investigations have involved drilling and sampling of soil and groundwater utilizing geoprobe, hydropunch, hollowstem auger, and other techniques; installation and sampling of monitoring wells and calculated rates and direction of groundwater flow; location of contaminant sources; and evaluation of facility usage, and Risk Assessments. Remediation of soils and groundwater have been performed, including underground storage tank removal, contaminated soil removal and treatment, and evaluation of best available technologies for remedial actions. Project support has involved negotiations with regulatory agencies, legal counsel, and property owners.*

### Telecommunication Property Site Assessment\*, Santa Barbara, California (Project Manager)

*Steve performed a subsurface soil and groundwater site assessment of a telecommunication property in Santa Barbara. Adjacent properties had released PCE and TCE into the subsurface soils and groundwater, but contamination at the site appeared disconnected from the larger plume originating offsite. A work plan and health and safety plan were developed and approved by the client and their corporate counsel. Multiple continuous-cored geoprobe borings were drilled and soil, soil vapor, and groundwater samples collected. Through analysis of the lithology, it was shown that the subsurface consisted of an ancient nearshore, lagoonal environment transected by stream channels. Two separated plumes were shown to occur at the site, with the larger plume derived from an offsite source and the smaller plume originating from onsite operations. A health-based risk assessment was performed for the property to determining appropriate cleanup levels.*

### Metal Stamping and Forming Facilities Property Transfer (Project Manager)

*Steve served as project manager in support of property transfer of three metal stamping and forming facilities. Two of the sites were listed as potential contributors to the contamination in the San Gabriel Valley groundwater, with the third listed by the U.S. EPA as within the top 16 contributors to the groundwater contamination in the Baldwin Park Operable Unit (OU). Research was performed on the individual sites and their contribution to the San Gabriel Groundwater Basin contamination; on the nature and extent of contamination in the San Gabriel Valley Groundwater Basin; on the locations and calculated contributions to the contamination in the Baldwin Park OU from other known PRPs; and on the water delivery and remediation plans for the different San Gabriel Valley OUs, and in particular, in the Baldwin Park OU. Opinions were generated regarding potential future liability for ownership of each facility, and an evaluation of the sources of contamination found in the Baldwin Park OU was developed. Determinations of legal implications and calculations of environmental liability were performed, and a range of anticipated costs associated with ownership of the properties were presented. Results were used in negotiations for the properties. Facility audits were performed at each site, with recommendations provided for equipment and process upgrades, which were aimed at limiting future releases and overall liability.*

## Managing Principal Hydrogeologist Technical Intro

---

### Ventura County Phase I and II Site Assessments (Project Manager)

*Steve managed multiple Phase 1 and 2 site assessments for coastal properties in Ventura County consisting of a power generating facility tank farm, hazardous materials storage area, agricultural, and degraded wetland areas to be acquired and restored to wetland conditions. The projects included research; soil, surface water, and groundwater sampling; assistance in property acquisition negotiations; and providing engineering geologic, hydrogeologic, and environmental and risk-based opinions, and recommendations aimed at facilitating the property acquisition while limiting liability to the State of California. Participation on the project included oversight during tank farm and hazardous material storage area decommissioning and property restoration.*

### Environmental Site Remediation

#### South Gate Tank farm Closure Reports (Project Manager)

*Steve developed remedial closure reports for a multiple-owner tank farm in the City of South Gate. To facilitate development of the property, the tank farm was split into four separate parcels. Remediation of the soils was performed, with impacted soils exceeding cleanup levels excavated and transported offsite, impacted soils within cleanup levels inhumed into a constructed soil repository, and clean soils reused during regrading activities. The project was estimated by prior consultants to cost more than \$9 million to complete; however, the project was finished on an expedited basis and received RWQCB closure for approximately \$1 million, a considerable savings to the client. Additionally, development of the property was performed on a parcel-by-parcel basis, allowing the City's contractor to begin development in a timely manner.*

### Healthcare

#### Confidential - Former NASA Industrial Facility, Hospital and MOB Redevelopment, Downey, California (Project Manager)

*Steve was the project manager for a combined environmental and geotechnical evaluation of a former NASA industrial plant demolition and redevelopment as a hospital and medical office building complex. The NASA facility was utilized for Gemini, Apollo, and Space Shuttle testing, and included an airfield, hazardous material storage, and cryogenic and physical testing areas. The project involved historical research to locate former hazardous material usage and storage areas; drilling and sampling of soil, soil vapor, and groundwater to evaluate impacts; combining the geotechnical and environmental sampling for efficiency and cost savings; development of assessment and health risk (PEA) reports for submission to the DTSC; asbestos and hazardous material abatement reports for use for demolition purposes; geotechnical reports for site grading, foundation, pile, liner design, and backfill requirements; construction oversight; and participation with client legal counsel in negotiations with state regulatory agencies.*

### Justice

#### INS Border Patrol Stations Remedial Investigations\* (Project Manager)

*Steve served as the project manager for remedial investigations at the INS Border Patrol Stations in Campo and Calexico, California. Leaking underground fuel tanks had released significant quantities of gasoline into the subsurface and groundwater at each site. Unique, complex geohydrologic conditions occur in the subsurface, with groundwater contamination at the Campo site largely following an ancient buried river channel, but overflowing the subsurface "paleo-banks" during winter high water conditions. Groundwater contamination at the Calexico site occurred within interspersed sand lenses of a thick clayey (nearshore lacustrine) formation 10 feet below ground surface, and extends under a residential area. A geoprobe sampling device and onsite mobile laboratory was used to define the aerial extent of the groundwater plumes, and groundwater monitoring wells were installed for confirmation sampling and to determine groundwater gradient. Site specific Work Plans, Sampling and Analysis Plans, Health and Safety Plans, and reports detailing conclusions and recommendations were developed and approved by the U.S. Army Corps of Engineers for each major phase of the project. Negotiations with the lead regulatory agencies were performed on behalf of the INS.*

# Steven Brady PG, CEG, CHG

## Managing Principal Hydrogeologist Technical Intro

---

### Marine & Port Facilities

#### Port of Los Angeles As-Needed Environmental Services\* (Project Manager)

*Steve served as project manager for as-needed environmental services for the Port of Los Angeles. Duties included review and compilation of data from numerous prior reports into summary reports; and environmental drilling, sampling, and monitoring well installations at the proposed Terminal Island Container Transfer Facility (TICTF) to determine if contaminated soil occurred at hazardous levels, and the levels of volatile organic and metals contamination in the groundwater. A report detailing conclusions and recommendations was generated for the TICTF site. An additional study was performed at the Proposed Dry Bulk Handling facility to assess hydrocarbon and volatile organic contamination.*

#### Los Angeles Harbor Department's Henry Ford Bridge Replacement Project\* (Project Manager)

*Steve served as project manager for a geologic, hydrologic, and contamination report for input to an EIR/EIS for the proposed Los Angeles Harbor Department's Henry Ford Bridge replacement project at the Port of Los Angeles. Duties included review of existing geologic, hydrologic, environmental data, and historical aerial photos; data compilation; seismic analysis; identification of impacts to the environment, workers, and the project; evaluation of mitigative measures; and report preparation.*

#### Todd Pacific Shipyard Groundwater Investigation, Los Angeles, California (Field Manager and Technical Reviewer)

*Steve served as field manager and technical reviewer for a soil and groundwater investigation at the Todd Pacific Shipyard at the Port of Los Angeles. The Shipyard was a 109-acre ship-building and repair facility at the Port. Responsibilities included management of the field sampling program at potential contamination sources such as machine pit, sumps, clarifiers, and dry wells in the maintenance/manufacturing buildings; drilling of shallow borings with limited access rigs at the targeted source areas; and collection of numerous groundwater samples at locations where suspected groundwater contamination might exist. In addition, quality control review of the reports developed for fire department and RWQCB compliance was also conducted.*

### Mixed-Use

#### Port of San Diego Rohr Facility, Chula Vista, California

*Steve was responsible for a detailed subsurface assessment of the Rohr facility. The intent of the assessment was to evaluate the 40-acre former aircraft part manufacturing facility for acquisition by the Port of San Diego for redevelopment into a business park and entertainment complex. The assessment identified the presence of soil, soil vapor, and groundwater impacts by petroleum hydrocarbons, VOCs, heavy metals, PCBs, and semi-volatile organic compounds. He utilized many sampling techniques to assess the limits and concentrations of contaminants in the subsurface. Ultimately, the team was able to develop a cost estimate for potential remedial action cost associated to corrective action to allow redevelopment.*

### Oil & Gas

#### Retail Petroleum Stations Assessment and Remediation (Project Manager)

*Steve managed numerous projects that involved assessment and remediation of petroleum releases at retail petroleum stations. Tasks included collection of soil, soil vapor, and groundwater samples during assessments, UST removal activities, and after releases have been discovered, corrective action plan preparation, periodic agency reporting, and remediation oversight. Remedial actions have included SVE with enhancement variations such as AS and biogac, total fluids extraction, oxygen releasing compounds, and excavation.*

#### Ventura County Oil Fields\* (Project Manager)

*Steve prepared permit applications, FESOP reporting forms, Storm Water Pollution Prevention Plans, Storm Water Monitoring Plans, and Notices of Intent for two oil fields in Ventura County. The plans involved documenting past releases, mitigative measures to control future releases, details of sampling methodology and timing of sampling events, and development of summary tables and forms for field personnel to use as documentation for sampling during storm events.*

## **Power Transmission & Distribution**

PG&E Former G Street Substation, Fresno, California, Fresno, California

*Steve was part of a team in conjunction with the DTSC to oversee investigation and cleanup, with the ultimate goal of certifying the site for unrestricted use. He completed a Preliminary Endangerment Assessment (PEA) that included a human health risk assessment (HHRA) and development of site-specific cleanup goals for constituents of concern. Following review of the PEA and feedback from DTSC, cleanup goals for lead, arsenic, PCBs, benzo(a)pyrene, and petroleum hydrocarbons in soil were approved by DTSC. We prepared a Removal Action Work (RAW) plan that recommended site-wide excavation of soils to approximately 1.5 feet to meet the cleanup goals. The DTSC approved the RAW and the excavation was completed in June 2009. During the remediation phase, he worked closely with DTSC staff to respond to changing field conditions. The remedial action was approved by DTSC in January 2010, and the site was certified for unrestricted use.*

## **Retail / Commercial**

Dry Cleaning Facility Assessment and Audit\* (Project Manager)

*Steve served as project manager for the soil and groundwater assessment, facility audit, and oversight of remedial activities at an active dry cleaning facility. Releases of PCE from older dry cleaning equipment and drum storage locations were investigated and the extent of both soil and groundwater contamination due to the releases was determined. Groundwater samples were also collected from perched zones and from below the groundwater table using a hydropunch sampling tool. Calculations of attenuation factors and PCE cleanup levels were performed using the LA RWQCB's Interim Guidance for VOC Impacted Sites.*

## **Roadways**

Cajalco Transportation Corridor EIR Investigation\* (Project Geologist)

*Steve developed the geologic portion of an EIR investigation for the proposed Cajalco Transportation Corridor. Duties included review of existing geologic and geotechnical information; review of historical and project specific vertical stereographic photographs; geologic field reconnaissance; slope stability and seismic considerations; identification of impacts and evaluation of mitigative measures; and preparation and submittal of a report and maps presenting geologic units, existing landslides, and potential constraints. In addition, preliminary environmental data was compiled and provided to the design team for evaluation of the different corridor segments.*

California SR 125 Corridor Site Investigation and Assessment\* (Project Manager)

*Steve served as project manager for a geologic/geotechnical investigation and hazardous materials assessment for the California SR 125 Corridor. The purpose of the study was to provide geologic, geotechnical, and environmental input for an EIR/EIS document consistent with Caltrans requirements to the engineering team evaluating the various alignment alternatives. The project included an environmental assessment, geologic reconnaissance, and seismic analysis of the alignment and alternatives. A contingency plan was developed for managing hazardous materials during road construction.*

Foothill Transportation Corridor Geotechnical Investigation\*, Orange County, California (Project Geologist)

*Steve performed geologic portions of a geotechnical investigation for the proposed Foothill Transportation Corridor through in Orange County. The investigation provided geotechnical design criteria for proposed bridges, highway embankments, and appurtenant structures. Duties included coordination of services, supervision of geologic field and trench mapping, down-hole logging of borings to 175 feet below ground surface, determination of groundwater depth and gradient, compilation of data and maps, and report preparation.*

### **Transit**

#### **San Diego Mission Valley Commuter Rail Alignments and Alternatives Site Assessments\* (Project Manager)**

*Steve served as project manager for Site Assessments on the San Diego Mission Valley East and Mission Valley West commuter rail alignments and alternatives. Duties included development of Phase I alignment reports for the projects, including detailed environmental evaluation of alternatives with recommendations, and liaison with MTDB real estate and geotechnical design staff and local regulatory agencies. Each report involved research and government/regulatory database searches, historic air photo analysis, site reconnaissance, property owner interviews, generation of alignment maps indicating problematic areas, and detailed conclusions and recommendations. Additional assignments for the MTDB included peer review of other consultant's work and management of construction monitoring services for the MTDB's Cuyamaca Street Improvements project.*

#### **Los Angeles County Metropolitan Transportation Authority (MTA) Environmental Services\* (In-House Project Manager)**

*Steve served as the in-house project manager for MTA environmental services. He provided coordination and management of due diligence activities for the Phase I, II, and III site assessments on SPTCo, AT&SF, UPRR, and adjacent properties, as well as individual and multiple parcel acquisitions. Duties consisted of generation of RFP scope-of-work and engineer's estimates for environmental and hydrogeologic investigations; evaluation of consultants reports and raw data; recommendations concerning liability and effects of soil and groundwater contamination on the proposed and ongoing rail line, station, and tunneling projects; recommendations for remedial actions/mitigative measures for each project; liaison with MTA Staff and legal council; and negotiations with property owners and regulatory agencies to set project cleanup criteria for contaminated sites. A commendation was received from the MTA for the work performed on this contract. Steve also managed site assessments on more than 300 miles of MTA corridor right-of-way, as well as performed specialized assessments for individual parcels. Conclusions and recommendations provided were used for property negotiations. In addition, Steve was the response team manager for MTA Real Estate and METROLINK division of the MTA.*

#### **Monitoring Well Abandonment and Closure**

#### **Activities – Moorpark Maintenance Facility, Ventura County, California (Project Manager and Director)**

*Steve managed and directed monitoring well abandonment and closure activities for the Caltrans Moorpark Maintenance Facility located in Ventura County. Seven onsite groundwater monitoring wells were abandoned in accordance with State of California Water Well Standards (Bulletins 74-81 and 74-90), by over-drilling with a hollow-stem auger to approximately 50 feet below ground surface and backfilling the boreholes with a cement/bentonite grout mixture. Following the completion of abandonment activities, he coordinated waste removal activities. All waste was properly disposed/recycled in accordance with all applicable Federal, State, and local regulations. Upon completion of all field activities, Steve prepared and submitted a Well Destruction Report to the Ventura County Department of Public Works Water Resources Division and the Los Angeles Regional Water Quality Control Board. Agency closure from the Ventura County Environmental Health Division was received for the Moorpark Maintenance Facility.*

#### **Groundwater Monitoring, Abandonment, and Closure Activities - Big Sycamore Maintenance Facility, Ventura County, California (Project Manager and Director)**

*Steve managed and directed semiannual groundwater sampling and reporting for the Caltrans Big Sycamore Maintenance Facility located in Ventura County. Groundwater sampling and reporting were required to maintain compliance with Ventura County Environmental Health Division (VCEHD) mandates. Prior to the commencement of field activities, he reviewed the County-approved Work Plan, prepared a Site-Specific Health and Safety Plan for groundwater monitoring activities, retained a Caltrans-approved and CDOHS-accredited analytical laboratory, and provided notification to the VCEHD inspector at least 48 hours in advance of each sampling event. Upon completion of each groundwater monitoring event, Steve prepared and submitted a Groundwater Monitoring Report to the VCEHD. Based on favorable results from groundwater monitoring activities, VCEHD recommended site closure to the Los Angeles Regional Water Quality Control Board.*

\* denotes projects completed with other firms

# Steven Brady PG, CEG, CHG

## Managing Principal Hydrogeologist Technical Intro

---

*Additionally, Steve conducted monitoring well abandonment and closure activities for the Caltrans Big Sycamore Maintenance Facility. Eight onsite groundwater monitoring wells were abandoned in accordance with State of California Water Well Standards by over-drilling with a hollow-stem auger to approximately 35 feet below ground surface and backfilling the boreholes with a cement/bentonite grout mixture. Following the completion of abandonment activities, he coordinated waste removal activities. All waste was properly disposed/recycled in accordance with all applicable Federal, State, and local regulations.*

### Groundwater Monitoring – Ojai Maintenance Facility, Ventura County, California (Project Manager and Director)

*Steve managed and directed semiannual groundwater sampling and reporting for the Caltrans Ojai Maintenance Facility located in Ventura County. Groundwater sampling and reporting were required to maintain compliance with Ventura County Environmental Health Division (VCEHD) mandates. The groundwater monitoring activities were completed in accordance with the requirements of the Ventura County Leaking Underground Fuel Tank (LUFT) Guidance Manual (Fourth Edition, April 2001). Following the completion of sampling activities Steve coordinated waste removal activities. All waste was properly disposed/recycled in accordance with all applicable Federal, State, and local regulations. Upon completion of each groundwater monitoring event, he prepared and submitted a Groundwater Monitoring Report to the VCEHD.*

### Groundwater Monitoring and Assessment Activities – Ventura Maintenance Facility, Ventura, California (Project Manager and Director)

*Steve managed and directed semiannual groundwater sampling and reporting for the Caltrans Ventura Maintenance Facility located in Ventura County. Groundwater sampling and reporting were required to maintain compliance with Ventura County Environmental Health Division (VCEHD) mandates. Prior to the commencement of field activities, he reviewed the County-approved work plan, prepared a Site-Specific Health and Safety Plan for groundwater monitoring activities, retained a Caltrans-approved and CDOHS-accredited analytical laboratory, and provided notification to the inspector 48 hours in advance of each sampling event. Upon completion of each groundwater monitoring event, Steve prepared and submitted a Groundwater Monitoring Report to the VCEHD.*

*Additional assessment required by the VCEHD included evaluation of soil and groundwater to evaluate whether released had also occurred from the waste oil tank. The scope of work was developed for the advancement of eight soil borings around the waste oil tank. Upon completion of all field activities, prepared and submitted a Waste Oil Tank Area Assessment Report to the VCEHD*

### Limited Site Investigation and Reporting – Altadena and Newhall Maintenance Facilities, Los Angeles County, California (Project Manager)

*Steve managed implementation of a limited site investigation and reporting project for the Caltrans Altadena and Newhall Maintenance Facilities for the evaluation of potential impacts near the former USTs. These investigations were conducted in order to maintain compliance with County of Los Angeles Department of Public Works mandates. Steve was liaison with the lead regulatory agency, oversaw field activities and prepared Subsurface Investigation reports documenting field procedures, evaluating analytical results, and recommending no further action (NFA) status from the Los Angeles County Department of Public Works.*

### Transit-Oriented Development

#### Limited Site Investigation and Reporting - Altadena and Newhall Maintenance Facilities, Los Angeles County, California (Project Manager)

*Steve managed implementation of a limited site investigation and reporting project for the Caltrans Altadena and Newhall Maintenance Facilities for the evaluation of potential impacts near the former USTs. These investigations were conducted in order to maintain compliance with County of Los Angeles Department of Public Works mandates. Steve was liaison with the lead regulatory agency, oversaw field activities and prepared Subsurface Investigation reports documenting field procedures, evaluating analytical results, and recommending no further action (NFA) status from the Los Angeles County Department of Public Works.*

### **Water**

#### Santa Clara River Watershed Hydrogeologic and Hydrologic Evaluation\*

*Steve served as a member of the project team evaluating the hydrogeologic and hydrologic conditions within portions of the Santa Clara River watershed. An extensive water budget analysis was performed on individual watersheds and contributory streams to the eastern groundwater basin, as well as for the entire groundwater basin, of the Santa Clara River, to estimate volumes of available water at any portion of the Basin.*

#### Calleguas Creek Watershed Management Planning Habitat and Recreation and Water Quality Subcommittees (Geologic and Hydrogeologic Engineer)

*Steve participated as a member of the Calleguas Creek Watershed Management Planning Habitat and Recreation and Water Quality Subcommittees. He provided engineering geologic and hydrogeologic opinions and recommendations to the committees aimed at consensus for management and obtainment of numerous conflicting goals of the various stakeholders. Additionally, he served on the Calleguas Creek wetlands restoration team for the California Coastal Conservancy identifying wetlands restoration candidates in the watershed.*

#### Calleguas Creek/Ormond Beach Wetlands, Oxnard, California (Project Manager)

*Steve managed multiple site assessments and risk evaluations for the acquisition of coastal and proposed wetland restoration properties in Ventura County. Properties included tank farms, hazmat storage areas, degraded wetlands, and agricultural land. Projects included oversight of tank farm decommissioning, remedial cost estimates and recommendations.*

# Thomas R. Szocinski

Senior Environmental Scientist

Thomas has more than 14 years of professional environmental consulting experience focusing on vapor intrusion, remediation, underground storage tank management, Brownfield Site management, and various subsurface environmental investigations throughout the United States, including RCRA, NEPA, and CERCLA/SARA regulated sites. He is a certified environmental professional (CEP) and a certified vapor mitigation inspector and specialist, having designed and implemented numerous vapor mitigation systems throughout the United States. In 2014, Thomas was appointed by the Michigan Department of Environmental Quality (MDEQ) to the Vapor Intrusion Technical Advisory Group (TAG) to assist in the review of MDEQ's current vapor intrusion criteria.

Thomas has also worked on complex remediation projects, including NPL sites, and has implemented various insitu technologies including: soil vapor extraction (SVE), air sparging (AS), active ventilation/mitigation, injection, and enhanced fluid recovery/aggressive fluid vapor recovery (EFR/AFVR).

## EDUCATION

AA, Natural Science, Lake Superior State University, Sault Ste. Marie, MI, 2000

BS, Environmental/Criminal Law, Lake Superior State University, Sault Ste. Marie, MI, 2001

## MEMBERSHIPS

Member, ASTM International

Member, The Academy of Board Certified Environmental Professionals

## AWARDS

2011 Phoenix Award – Brownfield Redevelopment, Piquette Square - Detroit, Michigan

2015 Grand Prize Phoenix Award – Brownfield Redevelopment, Medical Supply Warehouse – Detroit, Michigan

## PROJECT EXPERIENCE

### Landfill Gas Collection and Control

Municipal Landfill\*, Mount Clemens, Michigan (Project Manager)

*Thomas was the project manager for this project. Extensive remedial investigations were conducted to evaluate the extent of the landfill. Thomas designed and implemented a pilot study to collect the necessary data to design an active mitigation system. In 2011 and 2012, he worked in collaboration with the US Environmental Protection Agency (USEPA) to design and implement the active methane ventilation system within the landfill located near existing residential complexes to collect subsurface gases. The system extracts subsurface gases, including methane, by actively drawing from these designated locations. The subsurface gases are then directed to a self-igniting flare to burn off the methane and exhaust innocuously to the atmosphere. Throughout this process, Thomas was the lead technical negotiator for the municipality with USEPA, MDEQ, the Agency for Toxic Substances and Disease Registry (ASTDR), the Michigan State Housing Development Authority (MSHDA), the County Health Department, and the US Department of Housing and Urban Development (HUD).*

## **Environmental Mitigation and Monitoring**

Northville Garage Restaurant\*, Northville, Michigan  
(Project Manager/Vapor Mitigation Specialist)

*A former auto service and dry cleaning facility was redeveloped into a restaurant in Northville, Michigan. Environmental investigations identified petroleum and chlorinated volatile organic compounds (VOCs) at concentrations which posed a threat to indoor air quality. Thomas worked with MDEQ and local municipalities on designing and implementing a vapor mitigation system for the development. The site has since gone on to obtain national recognition and references by both the MDEQ and USEPA as a successful Brownfield redevelopment and vapor mitigation site.*

Piquette Square Brownfield\*, Detroit, Michigan  
(Vapor Intrusion Specialist)

*A former vehicle manufacturing facility (Studebaker factory 1910) site was redeveloped by a non-profit organization into a Veteran's Memorial Service center in Detroit, Michigan. Environmental investigations identified VOCs at concentrations which posed a threat to indoor air quality. Thomas worked with MDEQ and MSHDA on designing and implementing a vapor mitigation system for the development. In 2011 the Piquette Square project earned the Phoenix Award.*

Medical Supply Warehouse Vapor Mitigation System\*, Detroit, Michigan (Vapor Mitigation Specialist)

*A newly constructed 275,000 square foot medical supply distribution facility opened in May 2015 where once a blighted Detroit neighborhood stood. The redevelopment incorporates many state-of-the-art design elements including one of the largest passive vapor mitigation systems in the country. The site had several historical operations which included fuel storage operations, a rail yard, paint shops and commercial structures. Subsurface investigations within the area identified VOCs, including chlorinated solvents within the soil and soil gas, which posed a potential risk to the indoor air quality of the proposed medical supply warehouse facility. As part of the development a passive vapor mitigation system was designed by Thomas, which included a redundant ventilation and barrier system. Post-installation smoke and pressure testing were completed to ensure optimum sub-surface ventilation and barrier performance.*

*The Medical Supply Warehouse earned multiple National Awards, including: Phoenix Award, Redevelopment & Renewal Environmental Impact Award, People's Choice Award, and the overall Grand Prize Award at EPA's 2015 National Brownfield Conference. Thomas worked directly with the MDEQ for design approval and installation oversight.*

## **Site Management & Remediation**

Manufacturing Facility Insitu Remediation\*,  
Hastings, Michigan (Project Manager)

*Manufacturing facility had a release from their current underground storage tank (UST). A nearby down-gradient stream posed an immediate concern to the facility and immediate actions were taken to monitor and remediate the release. The petroleum release was adjacent to the existing manufacturing building; however it extended beneath the building foundation as well. Through successful coordination and management with the client, MDEQ, and the environmental insurance agents, Thomas was able to prepare a plausible response action to address the release and meet the objectives for all parties involved. Extensive environmental assessments were conducted on the project property and remediation activities which included the closure of the UST, hydro-excitation of the accessible soils, groundwater monitoring, and insitu remediation using Regeneration's PetroCleanze®. In 2014, as a result of the significant reductions in both soil and groundwater contamination, MDEQ approved restricted UST closure for the petroleum release with no further action required.*

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

## EXECUTIVE SUMMARY

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent NPL**

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 08/03/2015 has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

### **State- and tribal - equivalent CERCLIS**

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 08/03/2015 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

### **State and tribal landfill and/or solid waste disposal site lists**

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 08/17/2015 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

### **State and tribal leaking storage tank lists**

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 06/15/2015 has revealed that there are 2 LUST sites within approximately 0.5 miles of the target property.

### **State and tribal registered storage tank lists**

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 06/15/2015 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### ADDITIONAL ENVIRONMENTAL RECORDS

#### **Local Lists of Registered Storage Tanks**

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

7721 FIGUEROA ST  
GLENDALE, CA 90041

WDS S105254913  
N/A

Site 1 of 12 in cluster A

Actual:  
1176 ft.

WDS:

Facility ID: Los Angeles River 190322007  
Facility Type: Solid Waste Site-Class III - Landfills for non hazardous solid wastes.  
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
  
NPDES Number: Not reported  
Subregion: 4  
Facility Telephone: 8182470735  
Facility Contact: Bryan Langpap  
Agency Name: LA CO SANITATION DISTRICTS  
Agency Address: 1955 Workman Mill Rd.  
Agency City,St,Zip: Whittier 90607  
Agency Contact: James Stahl  
Agency Telephone: 5626997411  
Agency Type: County  
SIC Code: 4953  
SIC Code 2: Not reported  
Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).  
  
Primary Waste: SLDWST  
Waste Type2: Not reported  
Waste2: Solid Wastes  
Primary Waste Type: Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).  
  
Secondary Waste: Not reported  
Secondary Waste Type: Not reported  
Design Flow: 0  
Baseline Flow: 0  
Reclamation: No reclamation requirements associated with this facility.  
POTW: The facility is not a POTW.  
Treat To Water: Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.  
  
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

WDS:

Facility ID: 4 19I006193  
Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)  
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board  
Subregion: 4  
Facility Telephone: 5626997315  
Facility Contact: Patrick Freemon  
Agency Name: L.A COUNTY SANITATION DIST  
Agency Address: Not reported  
Agency City,St,Zip: 0  
Agency Contact: Not reported  
Agency Telephone: Not reported  
Agency Type: Private  
SIC Code: 4953  
SIC Code 2: Not reported  
Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.  
Primary Waste: STORMS  
Waste Type2: Not reported

Waste2: Stormwater Runoff  
 Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.  
 Secondary Waste: Not reported  
 Secondary Waste Type: Not reported  
 Design Flow: 0  
 Baseline Flow: 0  
 Reclamation: No reclamation requirements associated with this facility.  
 POTW: The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.  
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

If Satisfied: NO  
Date Satisfied: Not reported  
Site Status: ACTIVE  
Site Type: STATE RESPONSE OR NPL  
Completed: 08/22/2008  
Lien Amount: \$350,000.00  
Amount Remaining: Not reported  
Description: The Site is located in a commercial/residential neighborhood and consists of one parcel identified as Lot 51 and Lot 52 of Annandale View Terrace, in the City of Los Angeles, County of Los Angeles, as recorded in Book 11, Page 24. The Assessor's Parcel Number is 5480-012-016. Historic records indicate that a dry-cleaning operation was located in the retail portion of the northern parcel from the 1940s to the mid 1970s. In 2005, the City of Los Angeles identified both parcels for nuisance conditions and filed a Notice to Abate Vacant Structure and File Statement of Intent on March 14, 2005 for the southern parcel. Eviction proceedings have been continuing for the residents on the northern parcel. The site has been secured by chain-link fencing on the east and west, however, trespassers continue to inhabit the northern and southern parcels.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

|   | Data Release Frequency: Quarterly      |

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

|   | Data Release Frequency: Quarterly      |

## ***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

|   |   |

| Number of Days to Update: 64            | Next Scheduled EDR Contact: 10/19/2015  |
|   | Data Release Frequency: Varies          |

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site List***

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

## ***Federal RCRA non-CORRACTS TSD facilities list***

### **RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## ***Federal RCRA generators list***

### **RCRA-LQG: RCRA - Large Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/10/2015  
Date Data Arrived at EDR: 03/31/2015

### **RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/10/2015

## ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Varies

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## Local Lists of Hazardous waste / Contaminated Sites

### US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/25/2015  
Date Data Arrived at EDR: 03/10/2015

### **DEED: Deed Restriction Listing**

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006  
Date Data Arrived at EDR: 03/01/2007

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Last EDR Contact: 12/02/2009  
Next Scheduled EDR Contact: N/A  
Data Release Frequency: No Update Planned

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Date of Government Version: 07/22/2015  
Date Data Arrived at EDR: 07/24/2015  
Date Made Active in Reports: 09/02/2015

Next Scheduled EDR Contact: 11/30/2015  
Data Release Frequency: Varies

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## Nursing Homes

| Version Date:        | 2012                 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

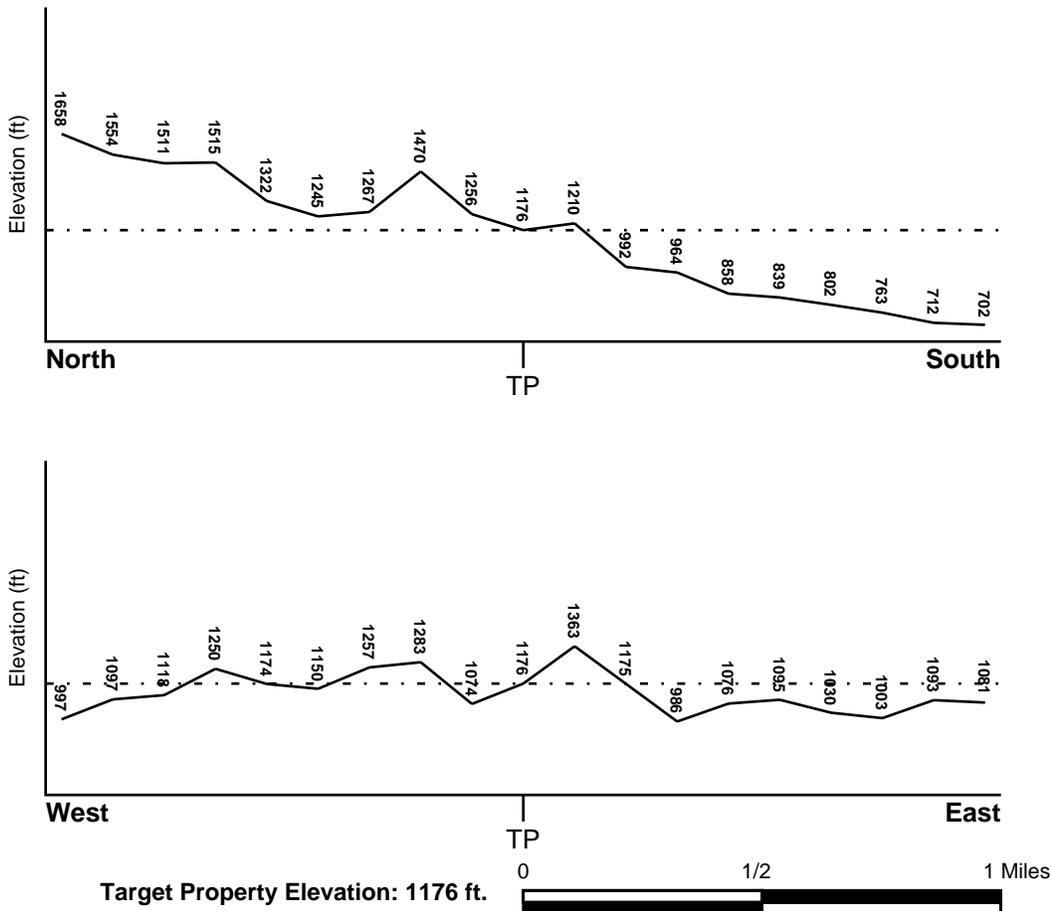

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## FEMA FLOOD ZONE

|  |   |
|--|---|
| <u>Target Property County</u><br>LOS ANGELES, CA | <u>FEMA Flood Electronic Data</u><br>YES - refer to the Overview Map and Detail Map |
| Flood Plain Panel at Target Property:            | 06037C - FEMA DFIRM Flood data  |
| Additional Panels in search area:                | Not Reported  |

## NATIONAL WETLAND INVENTORY

|  |   |
|--|---|
| <u>NWI Quad at Target Property</u><br>PASADENA | <u>NWI Electronic Data Coverage</u><br>YES - refer to the Overview Map and Detail Map |
|--|---|

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### *Site-Specific Hydrogeological Data\*:*

|                |            |
|----------------|------------|
| Search Radius: | 1.25 miles |
| Status:        | Not found  |

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|---|
| Not Reported  |                         |   |

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### ROCK STRATIGRAPHIC UNIT

Era: Precambrian  
System: Precambrian  
Series: Orthogneiss and paragneiss  
Code: Xm (decoded above as Era, System & Series)

### GEOLOGIC AGE IDENTIFICATION

Category: Metamorphic Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: FALLBROOK

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 40 inches

Depth to Bedrock Max: > 60 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information |           |           |                    |  |  |                           |                        |

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinator soil types may appear within the general area of target property.

Soil Surface Textures: coarse sandy loam  
unweathered bedrock  
fine sandy loam

Surficial Soil Types: coarse sandy loam  
unweathered bedrock  
fine sandy loam

Shallow Soil Types: sandy clay loam  
clay  
fine sandy loam  
gravelly - loam  
clay loam

Deeper Soil Types: gravelly - sandy loam  
unweathered bedrock

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

very fine sandy loam  
silty clay loam  
sandy loam

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

### RADON

#### State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

# EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

**When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.**

***Thank you for your business.***  
Please contact EDR at 1-800-352-0050  
with any questions or comments.

## **Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

# EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

***Thank you for your business.***  
Please contact EDR at 1-800-352-0050  
with any questions or comments.

## **Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EDR Inquiry # 4407421.3

Contact: Anuya Sawant

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

## Limited Permission To Make Copies

Stantec (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Subject: Industrial Waste Permit W-4339  
3001 Scholl Canyon Road

Mr. Dodge,

Enclosed herewith is Industrial Waste Permit (Permit) W-4339, issued by the City of Glendale Industrial Waste Program for the subject facility. Please complete the receipt enclosed with your permit and return to this office. You are requested to submit a **Fact Sheet** which describes in detail the operations and pretreatment processes along with a **Site Plan** that includes a tank and piping flow diagram.

This Permit covers all the requirements necessary for maintaining compliance with EPA and City standards. In order to verify compliance with the standards, this office will continue to conduct facility inspection and sampling, review reports submitted by Glendale Water and Power and report on compliance to the EPA and Regional Water Quality Control Board (RWQCB) as required.

The Permit issued to your company, that became effective on September 21, 2011, shall expire at midnight on December 31, 2016. During the term of this Permit, the permittee shall notify the Fire Chief 90 days prior to any changes to the facility, process, production or pretreatment system that may change the characteristics which causes it to be different from that expressly allowed under this Permit.

If you have any questions regarding this matter, please feel free to contact me at (818)548-4810.

Very truly yours,

A handwritten signature in black ink that reads "Gregory P. Ahern, Sr.".

Gregory P. Ahern, Sr.  
Sr. Fire/Environmental Safety Specialist

## PART II - EMERGENCY RESPONSE PLAN AND NOTIFICATION RESPONSIBILITIES

You are required to immediately report any hazardous materials or waste release to the Glendale Fire Department by dialing 911, and to the Governor's Office of Emergency Services (OES) at (800) 852-7550. Failure to do so may result in criminal and/or civil prosecution to the fullest extent to the law. Designate employees who will notify above agencies in case of an emergency.

RECEIPT OF INDUSTRIAL WASTEWATER DISCHARGE PERMIT W-4339

Company Name: City of Glendale Water & Power

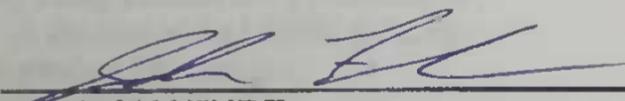

Location: 3001 Scholl Canyon Road

I.W. Permit No: W-4339

I hereby certify that I have received the INDUSTRIAL WASTEWATER DISCHARGE PERMIT W-4339 for the facility location at the City of Glendale Water & Power Landfill Gas to Energy Plant 3001 Scholl Canyon Road.

All requirements, discharge limitations, point(s) of compliance and standard and specific conditions have been reviewed. I fully understand the requirements, and I am aware that failure to comply with these requirements may result in enforcement action against my company.

Attention: David Marques,

Subject: NOTICE OF VIOLATION  
Scholl Canyon LFG Limited Partnership  
3001 Scholl Canyon Road

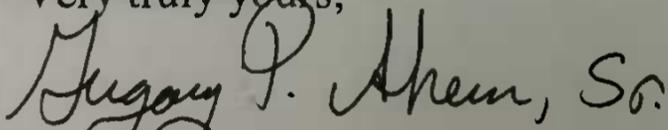

Gentlemen:

This letter will serve to provide notice, and does hereby so provide, that your failure to sample the waste effluent for flammability during the fourth quarter of 1999 and the first quarter of 2000 is in violation of the Industrial Waste Permit Monitoring requirements for the subject facility. The above violations were brought to the attention of your Plant Manager Bradley Everett, on April 19, 2000.

It is necessary that you immediately cease and desist at once from any and all violations of established permit monitoring requirements for the subject facility. You are hereby required to submit within 20 days of receipt of this Notice of Violation a detail letter of explanation as to the cause of the above violations and corrective actions that will be taken to prevent future violations.

If you have any questions regarding the above subject matter, you may contact me or Captain Eric Indermill at (818)548-4030.

Very truly yours,

Gregory P. Ahern, Sr.

Fire/Environmental Safety Specialist

Dear Mr. Everett:

We received your Report of Action Taken on Correction of Hazards for the survey done at your facility referenced above. Your report indicated that all items were corrected as of March 16, 2000.

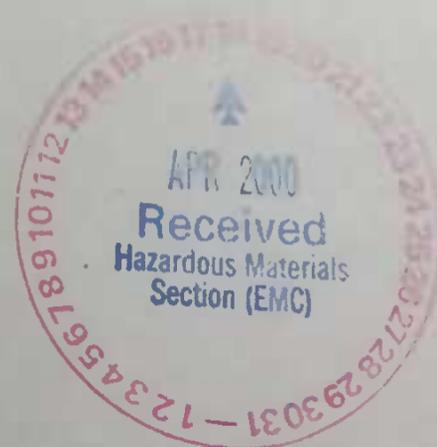

Your steps taken to correct these hazards seem to be satisfactory. Your file was closed on March 20, 2000.

Please call us at (562) 944-9355, if you have any additional questions.

Sincerely,

Kelly J. Howard  
Area Manager

RE: Palmer Management/Scholl Canyon Landfill  
(Visit No. 501148407; Case File #: 00081)

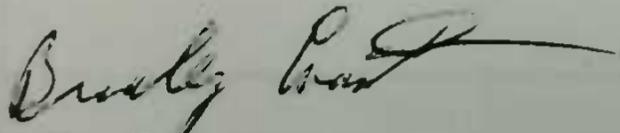

Dear Paul:

Attached please find the Employer Report of Action Taken, which addresses the corrective measures taken by Palmer Management to bring the Condensate Treatment System at Scholl Canyon Landfill to compliance with Cal/OSHA.

Please call me if you have any questions or comments regarding our corrective action measures.

We thank you for your assistance in restoring safe environment at our facility.

Sincerely,

Bradley Everett  
Plant Manager

cc: Dr. Alon Lebel, Invirotreat Inc.

| Instance    | A    | Correction Due Date | 3/20/00 | Date Corrected | 3/16/00      |

Describe Corrective Action Taken

The facility is an outdoor treatment system with passive vapor control system. The air emissions are not at trace levels only, well below the threshold concentrations that will have potential for harmful exposures to operators and visitors. Therefore, no respiratory protection program is required.

Action Taken to Prevent Recurrence

Maintain engineering controls to eliminate exposure to harmful vapors and airborne particulates.

|             |      |                     |         |                |          |

City of Glendale  
AVOID VERBAL ORDERS

September 24, 1998

To Jake Amar, Senior Environmental Technician

From David Starr, Fire Marshal 

Subject Scholl Canyon LFG

On September 21, 1998 we received a letter from Patrick Sullivan of SCS Engineers updating us on progress at the landfill gas processing facility. This letter did not address many of the Fire Department's concerns. To avoid confusion I would like to review our requirements for the facility.

The Fire Department is responsible for assuring appropriate Hazardous and Industrial waste treatment and disposal, and adequate fire and life safety in the design and operation of facilities within the City. The variability of the waste stream and gasses produced in the landfill makes it difficult to identify what are reasonable requirements in both these areas. It was for this reason that we required third party review. All parties involved agreed that OWT Emcon has the technical expertise to evaluate problems and solutions encountered in this process.

The Scholl Canyon Landfill Gas processing Facility (Scholl LFG) operates under an Industrial Waste Permit. This requires that all discharge to sewer meet Federal, State and Local water quality standards and that pretreatment facilities and processes are adequate to maintain discharge at those levels. Scholl LFG has also applied for a Hazardous Waste Treatment Tiered Permit as required by CCR Title 22. These permits will be issued after the treatment system has been evaluated and approved.

Prior to construction Fire Department Inspectors in the Permit Services Center perform Plan Review to verify compliance with applicable sections of the Building and Fire Codes. The plans for the Scholl LFG were not approved for the reasons detailed the letter to Mr. Maloney dated January 7, 1998, attached.

Steve Zurn, Senior Executive Assistant, Public Works, asked for and received permission to operate the treatment system prior to plan approval contingent on several conditions including the selection of a third party for review and recommendations. Please see the letter to Steve Zurn dated January 29, 1998, attached. OWT Emcon was selected early this year and started working on the project in April. The Scope of Work for OWT Emcon is to:

- characterize the landfill gas prior to treatment, post treatment and between stages of treatment as appropriate.
- review the pre-treatment system for adequacy
- review the system plans for items listed in plan check review letter dated January 7, 1998 (attached.)

As of September 24, 1998 no Building Permits have been issued for the construction at the Scholl LFG. The plant has been operating without an active Industrial Waste Permit by disposing of effluent off site. The Facility was granted permission to batch test and dump waste water to the sewer system during a "break-in" operation period.

In light of Mr Sullivan's letter we feel it is important to clarify the following.

- No changes in the requirements spelled out in attachments 1 or 2 have been made.
- We will expect the recommendations to OWT Emcon to be met prior to issuing any Building Permits.
- No Permits will be issued to the facility until the Building and Fire Code issues are addressed satisfactorily.

If you would like to discuss this matter please contact me directly. Please contact Captain Indermill at the EMC (4030) to coordinate technical assistance by our staff.

Public Works called the meeting and has never given us an agenda beyond "Scholl Canyon". I spoke with Steve Zurn and Jake and they said it is to discuss the high cost of meeting our requirements for site safety and operations plans reviews. EMCON reportedly estimates that to be a \$10,000 job that will take at least one month. The attachment is a pretty good summary that was sent to you last week, with a request for guidance on what else we need to provide the Chiefs. I do not know what has been sent on.

<< File: background 073099.wpd >>

It basically comes down to what we accept as adequate procedural safeguards for a process that can, and has, produce(d) flammable concentration in the tanks. We have fire permitting responsibilities and authority to approve a Contingency plan (H&S Title 22) and Training plans (H&S Title 22 and OSHA).

I think Public Works wants a safe operation, they just don't know how to get one for free. Jeff was involved in the original review of the plant- he is on vacation.

Vasken can provide expertise on the Codes authorizing our requirements, he has never finalized his position on appropriate permitting of the facility as a waste treatment site.

Ahern has been on many inspections and spills at the facility. Do you want to meet?

Eric

April 27, 1998

Mr. Jake Amar  
Senior Environmental Technician  
**CITY OF GLENDALE**

Glendale, CA 91206

Subject: Scholl Canyon Landfill Condensate

Per a meeting with Mr. Eric Indermill, Fire Captain; Mr. Vasken Demirjian, Hazardous Materials Supervisor, and Mr. Jake Amar, Senior Environmental Technician, Scholl Canyon Landfill, at the Environmental Management Center in the City of Glendale on April 20, 1998, I have summarized the initial scope of work proposed by EMCON.

#### **PROJECT UNDERSTANDING**

The major concern is that there are oily substances in the landfill gas (LFG) condensate that are causing the flammability point to be less than the 140° Fahrenheit allowable threshold. This condition is a potential safety hazard due to the explosive nature of the oily condensate. The source of the oily condensate is unknown at this time, but it is suspected that oil is being inadvertently added to the condensate during processing of the LFG; possibly at the compressor station. Laboratory analysis of the LFG condensate has been performed to determine the source of the oily condensate, but the results are inconclusive due to possible laboratory or sampling error.

A condensate pre-treatment system has been reviewed by the City of Glendale Fire Department. However, the proposed plans have not been approved due to several of the Fire Department's concerns as stated in the attached letter dated January 7, 1998. Primary concern is that the condensate influent and the process effluent is considered a Class I flammable liquid, and has not been adequately addressed in the proposal.

## SCOPE OF WORK

EMCON is to provide third-party review services for the Glendale Fire Department and the City of Glendale. Based on our understanding of the project, available correspondence, the attached letter, and the meeting held on March 23, 1998, the following scope of work is anticipated:

- EMCON will facilitate the testing to be performed to characterize the LFG condensate prior to treatment, post treatment and between stages of treatment (if deemed appropriate) at locations determined upon review (Item #3, attached letter).
- EMCON will review the pre-treatment system for adequate treatment of the LFG condensate, and offer recommendations (Item #3, attached letter).
- EMCON will review the treatment system plans for completion of items listed under Item #2 in attached letter.

To perform the scope of work, the initial tasks will be performed.

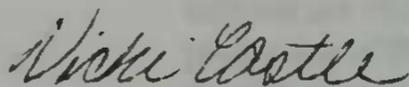

- EMCON personnel will review available plans and past LFG condensate laboratory results, and visit the pre-treatment system in preparation of system assessment for issues listed in Item #2.
- EMCON personnel will visit the site with City and Fire Department representatives to familiarize EMCON personnel with the site and further define pertinent issues. The visit will include a review of the pre-treatment system in preparation of system assessment for issues listed in Item #2. In addition, potential sampling locations for further LFG condensate analysis will be determined.
- Three certified laboratories will be selected to analyze the samples. The selected labs will not be the same labs that performed the analysis of condensate samples in the prior year.
- EMCON will prepare a detailed scope of work once the site visit has been conducted.
- EMCON will participate in a meeting with all parties involved with this project to explain the detailed scope of work. Revisions to the scope of work will be made as agreed upon by involved parties. A schedule showing when tasks are to be performed and completed will be developed and submitted to the Fire Department and City of Glendale.

**SCHEDULE**

EMCON staff will review available plans and laboratory results prior to our site visit. It is proposed that the site visit be performed within the first two weeks of May. A detailed proposal will be submitted and a meeting between involved parties will be held within the last two weeks of May. Meanwhile, depending on the availability of revised plans referred to in Item #2, a review of the system will be performed.

Please call me if you have any questions. EMCON Senior Engineer, Stan Strong, will be available to work on this project beginning May 4th. I will make arrangements early next week with EMCON personnel, the Fire Department and Jake Amar to visit Scholl Canyon Landfill.

Sincerely,

Vicki Castle  
Area Manager

Plan Review for: Industrial Waste Treatment System

Plan Check No. 10339

The Glendale Fire Department has completed a preliminary plan review of the proposed industrial waste treatment system for the abovementioned project. These plans are not approved and shall be revised, resubmitted and approved prior to issuance of the fire prevention permit. The following items shall be provided:

Item #1. The plans submitted have been preliminarily reviewed. The review cannot be completed, however, at this time. It has come to the Fire Department's attention that the condensate influent and the process effluent are class I flammable liquid. Because the treatment plant as it exists was not intended for the processing of flammable liquids, and the current proposal does not adequately address this hazard, as well as other Fire Department concerns (described in item #2), the plans shall be revised based on further engineering analysis (as described in item 3 below).

Item #2. The plans shall be revised to address the following items:  
a. Flammability throughout the process - details on proper handling, processing, treatment, and disposal of flammable liquids; shall include equipment, piping, monitoring systems, automatic shutdowns and automatic interlocks, etc., from a global [total process] perspective;  
b. Sulfides pretreatment control for waste stream discharge;  
c. Oil and grease extraction, processing, and disposal;  
d. Odor elimination;  
e. Secondary containment of the condensate collection tank and the piping between the tank and the treatment facility (this item may be considered for a phased approach; a work plan describing a proposed approach with time frames for phasing shall be approved as part of these plans);  
f. Placarding and/or signage of the site, all tanks, piping, and equipment.

Item #3. In order to assist the Fire Department in review of this project, a third party technical report shall be provided by a competent expert acceptable to both the owner(s) and the Glendale Fire Department. The costs associated with this shall be borne by the owner(s) [94 UFC Section 103.1.1]. The consultant shall have all necessary testing performed to fully characterize all current and potential products that could reasonably be found at such sites and be transported through the treatment system, review the proposed system for treatment of all such products, and make recommendations. The Fire Department will develop a list of acceptable consultants. Prior to hiring the consultant, a scoping and objectives meeting shall be set with the Fire Department.

If you should have any questions, please do not hesitate to call.

Glendale, CA 91201

Dear Mr. Demirjian:

**Scholl Canyon Landfill**  
**Landfill Gas Condensate Characterization and Discharge**  
**(Permit No. W-2762)**

This is in response to your January 26, 1998 letter regarding condensate characterization and discharge from Scholl Canyon Landfill.

The Sanitation Districts understand the significance of the flash point results. The Sanitation Districts did take appropriate action and worked cooperatively with City of Glendale Fire Department staff to address this issue.

As discussed in the Scholl Canyon Landfill Industrial Wastewater Discharge Self Monitoring Report for the Fourth Quarter of 1997, two samples analyzed by the Montgomery Watson Laboratories (MWL) during the monitoring period showed flash point values lower than 140 degrees Fahrenheit. To verify these results, both the City of Glendale and the Sanitation Districts collected multiple samples in December 1997 and January 1998 for flash point analyses. These analyses were conducted at Weck Laboratory and City of Los Angeles Department of General Services. All samples analyzed at these two laboratories showed that landfill gas condensate discharged from the Scholl Canyon Landfill was not flammable. The attached table summarizes these results.

As indicated in the table, there were five samples that did not meet the flash point requirement. Three of these samples were analyzed by MWL. The other two samples were collected on December 18, 1997 by the City of Glendale inspector and analyzed at an unknown laboratory. The results from these two samples are questionable because these samples, although having very different characteristics, were found to have almost identical flash points - 83 and 84 degrees Fahrenheit. One of these samples consisted of 100% landfill gas condensate, while the other was 90% canyon water and 10% condensate. The Sanitation Districts would appreciate knowing if these samples were analyzed by MWL.

The Sanitation Districts initiated an evaluation of the equipment and procedures used by MWL

Mr. Vasken Demirjian  
February 12, 1998  
Page 2

for flash point analysis in January 1998. The evaluation was prompted by an observation that virtually all (33 out of 34) samples analyzed by MWL since September 24, 1997 for Sanitation Districts' industrial waste compliance programs were found to have low flash points. The Sanitation Districts recently completed this evaluation and concluded that flash point test results obtained by MWL are unreliable and are likely to give false positive results. The City of Glendale is free to contact MWL to verify these findings.

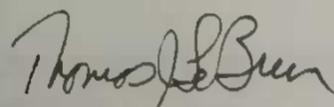

At the January 12, 1998 meeting, the Sanitation Districts found out that a sample was collected by the City of Glendale inspector on December 19, 1997 from the Scholl Canyon Landfill Gas Compressor Facility (Compressor Facility). The Compressor Facility, although located on the premises of the Scholl Canyon Landfill, is operated by the Scholl Canyon Landfill Gas Limited Partnership, and the Sanitation Districts have nothing to do with this facility. Wastewater from the Compressor Facility is discharged to the City of Glendale sewer system under a separate industrial wastewater discharge permit. Attached is a flow diagram of industrial wastewater streams generated from the Scholl Canyon Landfill site, both the active and closed portions of the landfill, and from the Compressor Facility. It is clear from this flow diagram that the discharge from the Compressor Facility is not related to Permit No. W-2762.

Finally, your letter also mentioned that the City of Glendale Fire Department is in the process of requiring a complete evaluation and analysis of gas recovery and treatment system by a third party. You indicated that this evaluation would assist your plan-check process of treatment system modifications submitted by the Scholl Canyon Landfill Gas Limited Partnership. The Sanitation Districts would like to participate in this evaluation process since your requirements for discharge of canyon water and condensate may change pending results of this third party evaluation.

If you have any other questions regarding this matter, please do not hesitate to contact Mr. Larry Kaufman of this office.

Very truly yours,

Charles W. Carry

Whittier, CA 90607-1400

Attention: Thomas J. LeBrun, Division Engineer

Subject: Condensate Characterization and Discharge

Dear Mr. LeBrun:

On January 12, 1998, we met with the County Sanitation District staff at the Scholl Canyon Landfill to discuss and review the flammability issue of landfill gas condensate. A three point proposal was submitted by your staff highlighting a potential problem with flash point analysis results received from the Montgomery Watson Laboratories.

This issue was further discussed in your Self Monitoring Report for the fourth quarter of 1997, dated January 15, 1998. However, both the January 15th. report and your staff proposal failed to acknowledge the significance of December 18 and 19 sample results indicating flammable characteristics.

Due to the dynamic nature of this waste stream and many unanswered questions that exist, the Fire Department is in process of requiring a complete evaluation and analysis of gas recovery and treatment system by a third party. This evaluation will also assist us in the plan-check process of treatment system modification plans submitted by the Scholl Canyon LFG Limited Partnership.

In the interim, as of January 13, 1998, the Fire Department approved the normal discharge of canyon water and condensate into the sewer. This activity is subject to potential future modification or policy directives to be established as a result of the third party evaluation.

SENT BY...

Attention: Industrial Waste Program

**SUBJECT: INDUSTRIAL WASTEWATER MONITORING, FIRST QUARTER 1998,  
SCHOLL CANYON LANDFILL GAS LIMITED PARTNERSHIP, 3001 SCHOLL  
CANYON ROAD, GLENDALE, CALIFORNIA  
(W-3142)**

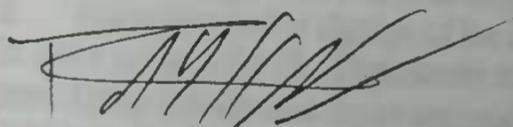

To Whom It May Concern:

This letter constitutes notification that no industrial wastewater has been discharged from the Scholl Canyon facility between January 1, 1998 and March 31, 1998. As such, no self-monitoring was conducted at Scholl Canyon during the first quarter (January through March) 1998.

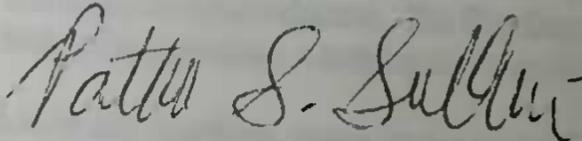

Since January 1998, all condensate collected as part of the Scholl Canyon Landfill Gas treatment facility has been collected and subsequently hauled off-site for appropriate disposal. This change in process is the result of repeated oil and grease discharge limitation violations. Please note that the pending upgrade and re-location of the system to the compressor station area will mitigate problems with oil and grease and will allow condensate to be treated and discharges to the city sewer system as originally intended.

Please address any questions or comments related to this submittal to our office.

Sincerely,

Ray Huff, R.E.A.  
Project Scientist

SCHOLL CANYON CONDENSATE TREATMENT UPGRADES

Areas of Fire Department Regulatory Concern.

Hazardous and Industrial Waste.

Fire and Life Safety.

Facility design and operation.

Variability of product stream from Landfill gasses.

Hazardous waste- Industrial waste.

Industrial waste.

Discharge to sewer shall meet State, Federal and Local standards.

Pretreatment facilities and processes shall be adequate to maintain discharge quality at those levels.

Hazardous Waste having the characteristic of inflammability is regulated by <sup>CCR</sup> Title 22 and

Glendale as a CUPA requires

tiered perimiting

CUPA permit

Fire and Life Safety

Plan review prior to construction to verify that safety issues are addressed prior to construction of inadequate design. Plan check evaluates (#10339 dated 1-7-98)

Handling of Flammable and combustible liquids.

Equipment, piping, monitoring systems, automatic shutdowns and interlocks.

Contaminants- oil and grease, sulfides and odor elimination

Secondary containment.

Variability of Waste stream.

The landfill gasses collected at Scholl Canyon have, on occasion, shown the characteristic of inflammability. This is unusual but not unheard of. Treatment processes designed for this type of material are considerably more expensive to build and operate.

OWT Emcon was selected by Glendale Public Works, SCS-LP and Glendale Fire as a third party to evaluate waste stream variability and adequacy of design.

Glendale Fire has notified SCS-LP and SCS-Engineering that the following are required:

All discharge to sewer system must meet State, Federal and Local limits.

Batch testing for flammability prior to discharge is allowable.

Periodic testing for other contaminants shall be performed as proscribed in the Permit when a permit for the new process is issued. Standards will be largely equal to those of the previous permit.

Wate Treatment and disposal shall be permitted by the Environmental Management Center per \_\_\_\_\_. Operation without such a permit is a violation of \_\_\_\_\_.

## CITY OF GLENDALE

Temporary operation of the treatment system was allowed with the following provisions.  
(Letter from David Starr to Steve Zurn dated January 29, 1998.)

A third party review process must be in place.

The third party agreement was to be managed and funded by Public Works.

The treatment system development and construction was to be continuously monitored by the third party. Regular (weekly) reports were to be provided to the Fire Department (Captain Indermill.)

A working time schedule was to be provided that outlined when plans would be approved and implementation could begin.

### Current situation

In a letter to Captain Indermill dated September 16, 1998, SCS Engineering indicated

Construction is virtually complete

Building Permits have been signed off

No discussion of Fire Department Plan check requirements

No global analysis of the suitability of the equipment, piping, monitoring systems, automatic shutdowns and interlocks for use with flammable materials was performed.

No discussion of OWT Emcon's recommendations or involvement in the design review process.

No discussion of Tiered Permitting requirements that have or have not been met.

SCS would like to start up the plant with a four day "close-out sampling regime" developed with Public Works- not OWT Emcon.

### Recommendation

We should not change or reduce any of the requirements previously communicated to SCS at this time.

We should have closer involvement in tracking the third party consultants involvement in the process evaluation.

We should require regular reports as spelled out in F. M. Starr's letter of January 29, 1998.

We should follow the recommendations of the agreed third party as to additional requirements for process safety waste stream characterization.

We should not issue any permits until all areas of Fire Department concern are satisfied..

We should revoke the temporary operating permit on \_\_\_\_\_ if these conditions are not satisfied..

CITY OF GLENDALE  
INTERDEPARTMENTAL COMMUNICATION

DATE August 4, 1999

TO B/C Starr

FROM Vasken Demirjian

SUBJECT Scholl Canyon Landfill Gas

Per your request, the following outline provides a summary of state regulations regarding hazardous waste handling, management and treatment:

1. California Code of Regulation (CCR), Title 22, Section 66265.31 - Maintain site to minimize possibility of fire explosion, or unplanned release of hazardous waste constituents to air or surface water.
2. CCR, Title 22, Section 66265.51(a) - Maintain a contingency plan onsite.
3. CCR Title 22, Section 66265.52(d) - Identify an Emergency Coordinator.
4. CCR Title 22, Section 66265.16(a)(2) - Provide adequate training to the employees
5. CCR Title 22, Section 67450.3(c) - Prepare and maintain an Onsite Hazardous Waste Treatment Facility Information Plan.
6. CCR Title 22, Section 67450.3(c)(9) - Prepare and maintain a written Operating Instructions for the treatment unit.

FAX (818) 549-9777

**SUBJECT: NOTICE OF VIOLATION, SCHOLL CANYON LFG LIMITED PARTNERSHIP,  
3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

Dear Greg:

The Scholl Canyon LFG Limited Partnership (SC-LP) was recently issued a Notice of Violation (NOV, dated December 31, 1997) for violation of its effluent limitation for flash point, dissolved oil and grease, and dissolved sulfides, which occurred December 19, 1997, during grab sample collection by the City of Glendale. This response to the NOV is provided by SCS Engineers (SCS) on behalf of the SC-LP in accordance with Industrial Waste Discharge Permit (W-3142).

Analytical results from the December 19, 1997 sampling event indicated that the condensate from the treatment system had a flash point of 81° Fahrenheit, dissolved oil and grease content of 1,524 mg/L and a dissolved sulfides content of 4.54 mg/L. These levels are all in exceedance of the appropriate discharge limitations of >140° Fahrenheit for flash point, 600 mg/L for oil and grease, and 1.0 mg/L for dissolved sulfides. SC-LP believed that these violations, as well as the numerous violations that have occurred during 1997, are a result of the inadequacy of the existing wastewater treatment system. Further, it is believed that the pending upgrade to the condensate treatment system will solve the numerous violations problems that have become a more common occurrence.

Therefore, as of January 6, 1998, SC-LP has temporarily ceased discharging condensate to the publicly owned treatment works (POTW) sewer system, to expedite the upgrade of the condensate treatment system. The accumulated condensate on-site has been hauled away for proper disposal. Once the proper manifests have been returned to SC-LP, copies will be made available to the City of Glendale for your reference.

Further it should be noted that SC-LP's intent was to only temporarily cease discharge to the POTW and to resume discharge after the completion of the new condensate treatment system at the Scholl Canyon LFG compression station. However, due to the failure of the Fire Department to approve the plans, construction has been suspended.

CHARLES W. CARRY  
Chief Engineer and General Manager

January 15, 1998  
File No. 31R-104.10

Mr. Gregory P. Ahern  
Industrial Waste Inspector  
Glendale Fire Division  
Environmental Management Center  
Hazardous Materials Section  
780 Flower Street  
Glendale, CA 91201

Attention: Industrial Waste Program

Dear Mr. Ahern:

**Scholl Canyon Landfill**  
**Industrial Wastewater Discharge Self Monitoring Report**  
**For the Fourth Quarter of 1997**  
**(Permit No. W-2762)**

The purpose of this letter is to submit self monitoring data for Scholl Canyon Landfill pursuant to permit No. W-2762 issued by the City of Glendale. Included in this letter are the quarterly compliance report sheet and laboratory analysis reports for the fourth quarter of 1997.

On October 15, through 16, 1997, one sample was obtained for quarterly self monitoring at the site industrial waste sample box IW1. The sample was collected by BC Analytical sampling personnel, and sent to Montgomery Watson Laboratories (MWL), an independent, state certified laboratory for analysis. The discharge quantities reported in this letter consist solely of the volume discharged through the industrial wastewater flow meter except average daily flow which also includes the volume discharged from the radiator filling area drain. The laboratory results for the quarterly self monitoring sample are attached. The analytical results indicate no violations of discharge limits during the fourth quarter of 1997, except for flash point. The apparent violation of the flash point requirement is attributed to laboratory error, and is described in detail below.

On December 17, 1997, the Sanitation Districts notified the City of Glendale that the laboratory analyses performed by MWL on the quarterly industrial waste water sample had been completed, and that the results indicated an apparent violation of the flash point requirement for the waste water. MWL determined that the flash point for the sample is 76 degrees Fahrenheit (°F); the minimum flash point required in the permit is 140 °F. Historically, waste water discharged from

JULY:  
G.F.M

Gregory P. Ahern  
Page 2

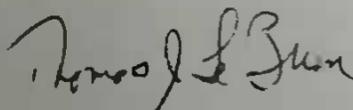

the Scholl Canyon Landfill has always met the requirement for flash point. There were no unusual characteristics detected in the October 15-16, 1997 waste water sample that would account for the drastic decrease of the flash point. To verify the result, the City of Glendale and the Sanitation Districts collected additional waste water samples for flash point analyses. These samples were analyzed at the City of Los Angeles Department of General Services, Standards Division Laboratory (City Laboratory), MWL, and Weck Laboratory, another independent, state certified laboratory. The composition of the samples and the results from these samples are summarized on the attached table. Samples collected on the same date and analyzed at different laboratories indicate split samples.

Samples consisting of typical waste water, which contains a mixture of landfill gas condensate and canyon water, had varying flash point results depending on the laboratory conducting the analysis. However, samples consisting of only canyon water always met the flash point requirement of 140 °F. Therefore, the apparent flash point violations were presumably caused by landfill gas condensate, or by errors in conducting the flash point analyses. Following the instructions of the City of Glendale's industrial waste inspector, the Sanitation Districts began on December 31, 1997, to only discharge landfill gas condensate in batches after each batch had been tested and shown to have a flash point of greater than 140 °F. A total of ten landfill gas condensate samples were collected by the City of Glendale industrial waste inspectors and Sanitation Districts personnel between December 31, 1997, and January 12, 1998. The samples were analyzed by the City Laboratory, MWL, and Weck Laboratory. The results, as summarized on the attached table, show that all samples, except the one analyzed by MWL, meet the flash point requirement. These results suggest that flash point results from MWL are suspect. On January 12, 1998, the Sanitation Districts met with the City of Glendale to discuss this issue. Because the results overwhelmingly show that the flash point of landfill gas condensate is greater than 140 °F, the City of Glendale approved normal discharge of all waste water from the Scholl Canyon Landfill beginning on January 13, 1998.

If you have any questions regarding any of the enclosed materials, please call Mr. Larry Kaufman at the number listed above.

Very truly yours,

Charles W. Carry

ATTENTION: Gordon L. Deane, President

SUBJECT: Termination of Discharge and Proper Disposal of  
Flammable Material

Dear Mr. Deane:

On January 5, 1998, two split samples of condensate wastewater from the subject facility were taken and analyzed for ignitability (Flash Point) by two different State certified laboratories. According to the Lab analysis results, one sample exhibited the characteristic of ignitability (Flash Point < 140°F) and the other did not. It is our intention at this point to base our decision by relying on the conservative result in order to protect and prevent any potential harm to the environment.

The Glendale Municipal Code (GMC), Article V, Section 13.40.310 prohibits the discharge of flammable materials to the sanitary sewer. Additionally, a material with a Flash Point below 140°F is also classified as being hazardous waste in accordance with California Code of Regulations (CCR) Title 22, Section 66261.21.

You are required to terminate the discharge of wastewater that meets the above criteria to the sanitary sewer, including the collected condensate wastewater in 10,000 gallons storage tanks.

In March and April of 1997, samples of condensate prior to its treatment also exhibited the characteristic of ignitability. In accordance with CCR, Title 22 any process treating waste with this characteristic must be performed under a Tiered Permit issued by this office.

City of Glendale  
780 Flower Street  
Glendale, CA 91201

SUBJECT: Notices of Violation -- April 10, 1997; April 28, 1997

Gentlemen:

This letter will serve as our response to both of the aforementioned notices.

## April 10, 1997 Notice

As discussed in paragraph 3 of the subject notice, prior to the time of the notice, Mr. Ahern was contacted by Patrick Sullivan of SCS Engineers and the problem and likely cause were discussed. It was agreed that the violation was likely caused by the loss of carbon from the carbon beds due to the loss of a screen which holds the carbon in place. Mr. Sullivan immediately obtained authorization to fix the screen and replace the carbon. In addition, as required by our permit, additional testing was scheduled. That testing was (and as discussed below, we hope still can be) scheduled for today.

With respect to the replacement of the oil water separator mentioned in Mr. Ahern's letter, we have sought and received proposals from two vendors. One proposal was returned as inadequate and we are awaiting a revised proposal from the vendor. As soon as a final decision is made with respect to the required equipment, the placement of the equipment, and the operation of the equipment for not only a new oil water separator system but also the other modifications being sought by the City, we will proceed with ordering. As you know, this project has been delayed many times due to circumstances beyond our control. The different parties involved have resulted in numerous changes being requested. These changes have been requested by your department as well as Glendale Public Works and the County Sanitation Districts of Los Angeles County. As of last week, again there have been suggested changes which we are trying to address. Currently, a meeting is being scheduled for Tuesday or Wednesday next week. We hope that all matters can be addressed at that time so the design is set, equipment can be ordered, and we can proceed with the installation.

April 28, 1997 Violation

With respect to the above notice, which was received via fax today, based on information received by us to date Scholl Canyon LFG Limited Partnership (SC-LP) does not believe that it was the cause of the odor complaints. We respectfully request that your office provide us with the exact dates, times, locations and sources of the complaints. A copy of your logs indicating complaints received will be required as well for our investigation. We have verbally requested similar information from Glendale Public Works, but that Department indicates that it has received no such complaints. Further, we have checked with our operators which are still required to conduct "odor patrols" when we are discharging and they have indicated that they have not noticed any odor at those times.

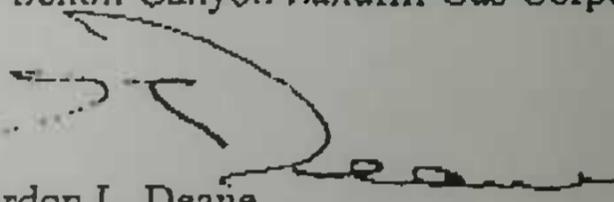

Despite the fact that we do not believe we are the cause, SC-LP had suspended discharges as requested pending the receipt of new carbon beds. Those beds are now in place. Further, we had scheduled a re-test of the condensate as required by our permit for today to demonstrate that our condensate is meeting the requirements of our permit. That test was put on temporary hold pending receipt of this notice which we were informed would be coming to us.

As indicated by your letter, we have the option of providing the required pretreatment or hauling the condensate off-site for legal disposal. Based on our belief that the required pretreatment is in place and that our discharge will be in full compliance with our permit, we have instructed our operators to proceed with the discharge and, hopefully, reschedule the test of the condensate for today or tomorrow to demonstrate such compliance.

Given the information which we have, the above should provide an adequate response to the two notices. Upon receipt of the requested information from your department, we can respond more fully to the specific complaints which your department says it has received.

Please feel free to contact me directly if you have any questions on this matter.

Annual Unified Program Certification

Dear Business Owner:

Chapter 6.95 of the California Health and Safety Code requires your Hazardous Materials Business Emergency Plan (HMBEP) to be reviewed and updated annually.

Please find your most recent Hazardous Materials Business Emergency Plan that you have in your possession somewhere within your records. This Plan should include Facility & Chemical Inventory information. Review the information carefully and confirm the accuracy of all your hazardous materials with the actual quantities. If there are no changes, mark the first box below that indicates no changes have been made and return this page to above address on the letterhead. This will serve as your official certification statement and update in accordance with Title 19, Section 2729 requirements.

If you have made changes to your HMBEP, please check the "CHANGES HAVE BEEN MADE" box below and return this page to above address on the letterhead. The Fire Department will send you all of the appropriate forms necessary to update your status.

CHECK THE APPROPRIATE BOX AND SIGN THE FORM BELOW

[X] OUR BUSINESS HAS PREVIOUSLY FILED THE HAZARDOUS MATERIALS INVENTORY FORM PURSUANT TO SECTION 2729.2 AND 2729.3 REQUIREMENTS AND NO CHANGES HAVE BEEN MADE (all items must be correct):

- 1. The information contained in the hazardous materials inventory most recently submitted to the CUPA is complete, accurate, and up-to-date.
2. There has been no change in the quantity of hazardous material as reported in the most recently submitted Inventory.
3. No hazardous materials subject to inventory requirements and not listed on our most recently submitted inventory form are being handled.

## 1. INTRODUCTION

This document serves as a hazard communication program to be used at the Palmer Management/Scholl Canyon Landfill Gas Plant and Condensate Treatment System. It is intended to identify the hazardous substances present at the Scholl Canyon facility, provide technical safety information on each substance (chemical) and precautionary measures that need to be taken to protect the employees during the workplace's normal operating conditions and in foreseeable emergencies.

For additional information, refer to the following documents which are stored at the Operation Trailer:

- Operations and Emergency Response Document
- Injury and Illness Prevention (IIP) Program
- CTS Process Safety Plan
- Gas Plant Field Operations Manual
- Facility MSDS Book
- Spill Prevention and Countermeasure Control Plan
- Hazardous Material Business Plan

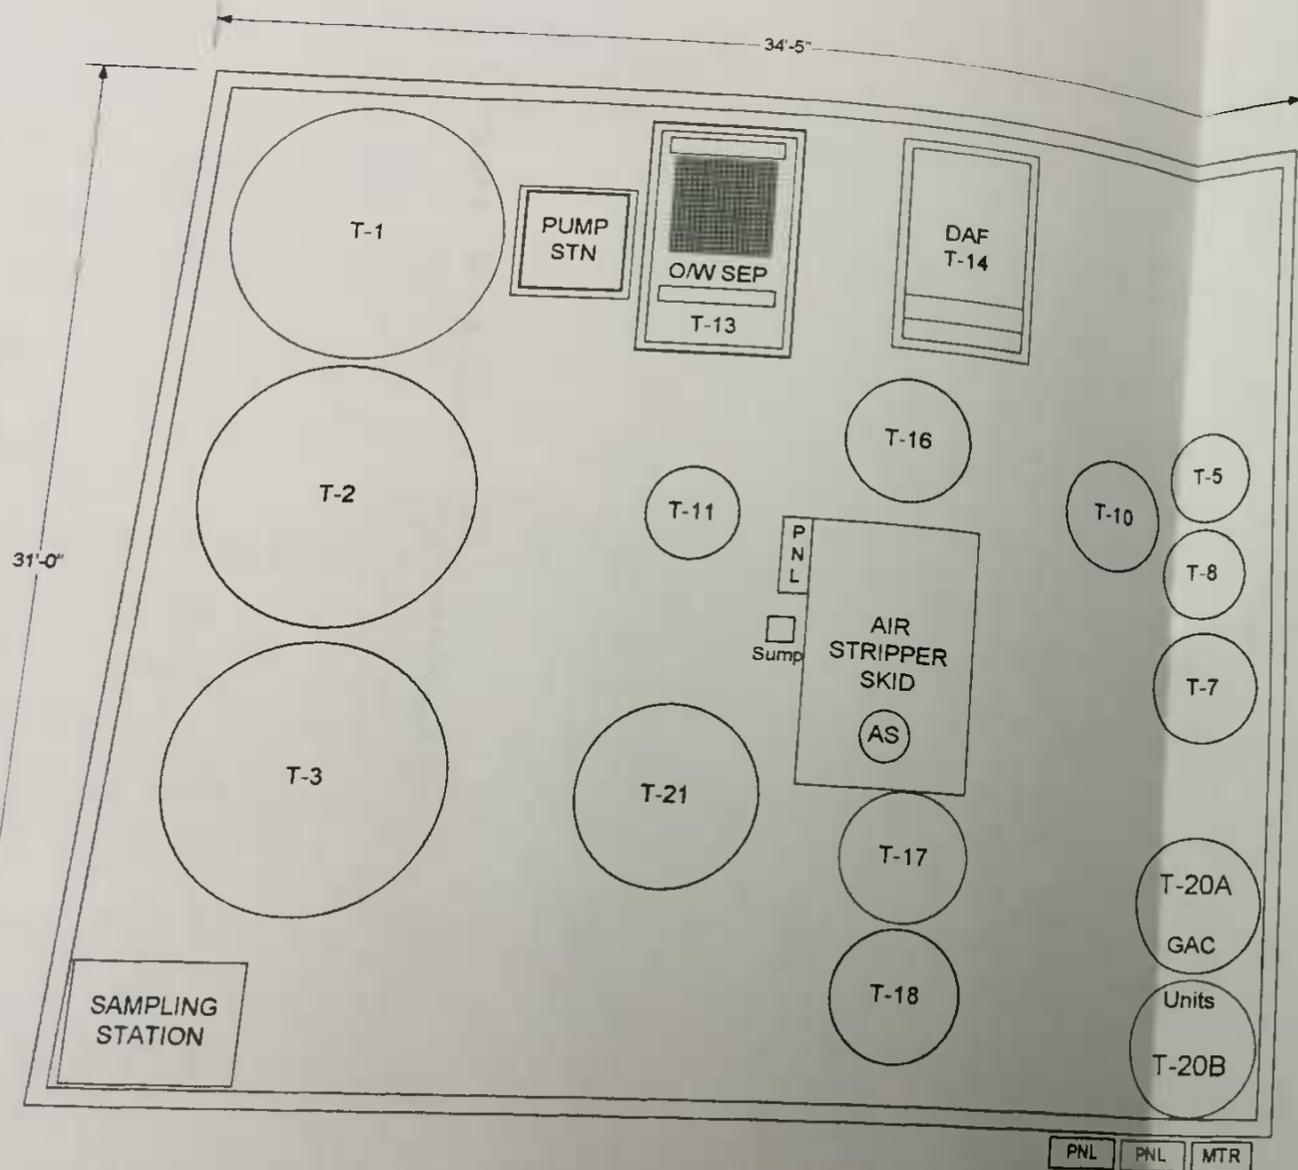

## 2. LIST OF HAZARDOUS MATERIALS IN THE WORKPLACE

Hazardous material being used at the Palmer Management Gas Plant and Condensate Treatment System include the following:

- Caustic Soda – Stock Solution, stored in a 180-gallon double contained tank
- Sodium Hypochlorite – Stock Solution, stored in a 150-gallon double contained tank
- Gibraltar Oil
- Used Oil – Removed and stored at the CTS for off-site disposal
- Sulfatrol

In addition, the plant also uses polymers and coagulants in the emulsion treatment process. These chemicals are not considered hazardous. However, they can cause skin, eye or respiratory irritation, and are a safety hazard during spills.

The Gas Plant also stores small quantities of antifreeze, gasoline and oxygen gas for GC calibration.

### 3. HAZARDS IDENTIFICATION

**EMERGENCY OVERVIEW:** A clear, light yellow-green liquid having a chlorine-like odor. The liquid and mists may be corrosive to the eyes, skin and respiratory tract. Inhalation of high mist concentrations can cause permanent lung damage. The NIOSH I.D.L.H. for Sodium Hydroxide is: 10 mg/m<sup>3</sup>.

**POTENTIAL HEALTH EFFECTS**

**INHALATION:** Inhalation of mists may be severely irritating or corrosive to the nose, mouth, throat, mucous membranes and lungs. Symptoms of exposure may include shortness of breath, sneezing, coughing, choking, chest pain, impairment of lung function and burns to the respiratory tract with the production of lung edema. Inhalation of high mist concentrations may result in permanent lung damage.

**EYE CONTACT:** Exposure to the liquid or mists may cause severe eye irritation or burns. Symptoms of exposure may include tearing, redness, swelling and pain. Corneal damage with impairment of vision may result from direct contact with the liquid, unless treated promptly.

**SKIN CONTACT:** Exposure to the liquid or mists may cause severe skin irritation or burns. Symptoms of exposure may include redness, swelling, discomfort or pain and possible scab formation. Prolonged skin exposure to the liquid may cause destruction of the dermis with impairment of the skin, at site of contact, to regenerate. No published data indicates this product is absorbed through the skin.

**INGESTION:** Ingestion may cause severe irritation or burns to the entire gastrointestinal tract, including the stomach and intestines. Symptoms of exposure may include nausea, vomiting, diarrhea, abdominal pain, bleeding and/or tissue ulceration.

**CHRONIC:** The chronic health effects of exposure to the liquid or mists are expected to be the same as for acute exposure.

### 1. CHEMICAL PRODUCT IDENTIFICATION & COMPANY IDENTIFICATION

**PRODUCT IDENTIFIER:** Sodium Hydroxide 50% Solution (All Grades)

**GENERAL USE:** Used in industry to neutralize acids; to precipitate alkaloids; in metal finishing; in cleaners; and to precipitate most metals (as hydroxides) from aqueous solutions.

**PRODUCT DESCRIPTION:** An aqueous solution of Sodium Hydroxide. Synonyms for Sodium Hydroxide include: caustic soda, lye soda, sodium hydrate and white caustic.

**INFORMATION PROVIDED BY:** Brenntag Pacific, Inc.  
5700 N.W. Front Avenue  
Portland, OR 97210

CAUSTIC SODA

NDA = No Data Available

N/A = Not Applicable

### 3. HAZARDS IDENTIFICATION

**EMERGENCY OVERVIEW:** A clear to slightly turbid, colorless liquid having no characteristic odor. The mists and liquid are corrosive to all tissues contacted. Inhalation of mists may cause permanent lung damage. This material reacts with acids to release a large amount of heat and can react violently with acids and other substances. The I.D.L.H. for Sodium Hydroxide is: 10 mg/m<sup>3</sup>.

#### POTENTIAL HEALTH EFFECTS

**INHALATION:** Inhalation of mists or an aerosol can cause severe irritation or burns to the nose, mouth, throat, membranes and lungs. Symptoms of exposure can include coughing, sneezing, choking, shortness of breath, chest pain and impairment of lung function. Inhalation of a high mist concentration may result in permanent lung damage.

**EYE CONTACT:** Exposure to the mists or liquid can cause severe eye irritation and/or burns. Symptoms of exposure include tearing, redness, swelling, pain and possible mucous discharge. Exposure may cause permanent damage and/or visual impairment even when prompt treatment is provided.

**SKIN CONTACT:** Exposure to the mists or liquid can cause severe skin irritation and/or burns. Symptoms of exposure include redness, swelling, pain and possible ulceration. Prolonged skin exposure to this material may result in destruction of the dermis with impairment of the skin, at site of contact, to regenerate. No published data indicates this material is absorbed through the skin.

#### INGESTION:

Ingestion can cause severe irritation and/or burns to the entire gastrointestinal tract.

Scholl Canyon LFG Limited Partnership  
1309 114<sup>th</sup> Avenue SE #101  
Bellevue, WA 98004

Attention: David Marques

Subject: Notice of Violation  
Scholl Canyon LFG Limited Partnership  
3001 Scholl Canyon Road

Gentlemen:

In an effort to help you comply with the conditions of your Industrial Waste Permit W-3142, this letter will serve notice that the Self-Monitoring grab sample taken on June 11, 2002, at the subject facility was found to contain a Total Toxic Organics content of 3.63 mg/L in violation of local discharge limits (2.00 mg/L). The explanation given in the letter dated July 9, 2002, from Invirotreast Inc. concerning the above violation is unacceptable since the duplicate sample was taken 5 minutes after the original sample.

All discharges to the municipal wastewater system must comply with established Federal and Local discharge limits. It is required that a detailed letter explaining the cause of the above violation and describing the corrective actions that will be taken to prevent future violations be submitted to this office. This response should be submitted to this office by August 20, 2002.

If you have any questions regarding the above subject matter please contact me at (818)548-4030.

Very truly yours,

Gregory P. Ahern, Sr.  
Fire/Environmental Safety Specialist

July 9, 2002

Mr. Greg Ahern  
City of Glendale, E.C.M.  
780 E. Flower Street  
Glendale, California 91201

**SUBJECT: SCHOLL CANYON LANDFILL, CONDENSATE TREATMENT SYSTEM  
QUARTERLY MONITORING RESULTS FOR THE PERIOD  
APRIL - JUNE 2002  
INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO. W-3142**

Dear Mr. Ahern:

Invirotreat Inc., on behalf of Palmer Management Partnership/Scholl Canyon, is pleased to submit the results of the quarterly monitoring event conducted on June 11, 2002, at the Scholl Canyon Landfill, Condensate Treatment System (Quarterly period April - June 2002). Samples were taken from the Secured Sampling Facility of the Condensate Treatment System, representing the final discharge point to the City sewer. Sampling and analysis were conducted in accordance with the monitoring requirements of Industrial Wastewater Discharge Permit No. W-3142 for the above facility.

As shown in Table 1 (attached), the results indicate - with the exception of the total toxic organics (TTO's) - compliance with the discharge limitations established by the City of Glendale for this facility. The TTO results during the 6/11/02 monitoring event indicated a total concentration of 3.6 mg/l, which is above the 2 mg/l limit. It should be noted that the granular activated carbon (GAC) vessels, which are responsible for removal of TTO's at the Condensate Treatment System, were serviced a few days prior to the testing event and fresh carbon was deposited in the vessels. Therefore, effective removal of TTO's was anticipated.

We were informed of the elevated TTO results on July 2, 2002. The results reflected high concentrations of volatile organic compounds (VOC's). We immediately requested the laboratory to re-test for VOC's (EPA 8260) using the duplicate vial collected during the sampling event. The re-test results indicated TTO's concentration of 1.7 mg/l, which is below the discharge limit. We also collected on July 3, 2002 a fresh sample from the final effluent for VOC analysis. The results from this sampling event indicated TTO concentration of 0.379 mg/l, which is consistent with historic results.

Based on the results of the retest (6/11/02) sample and the fresh sample (7/3/02), and considering the recent service of the GAC vessels, we are confident that the original results for VOC's were erroneous, perhaps due to laboratory contamination. The proactive approach we took to retest the effluent and the fact that in later analytical results the effluent was in compliance with the discharge limits for TTO's support our conclusion discussed above.

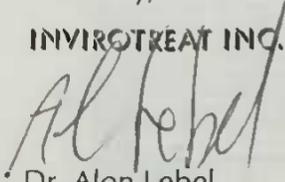

Page 2 of 2

The complete analytical laboratory reports, including the additional analytical reports for VOC's are included as Attachment A.

Please address any questions or comments related to this submittal to our office or to the Plant Manager, Mr. Bradley Everett at (818) 244-9722. If you would like to discuss the TTO's results, please feel free to call me (office number: 714 871-1686; mobile phone number: 714 926-7505).

Sincerely,

Gentlemen:

This letter will serve to provide notice, and does hereby so provide, that your failure to sample the waste effluent for flammability during the fourth quarter of 1999 and the first quarter of 2000 is in violation of the Industrial Waste Permit Monitoring requirements for the subject facility. The above violations were brought to the attention of your Plant Manager Bradley Everett, on April 19, 2000.

It is necessary that you immediately cease and desist at once from any and all violations of established permit monitoring requirements for the subject facility. You are hereby required to submit within 20 days of receipt of this Notice of Violation a detail letter of explanation as to the cause of the above violations and corrective actions that will be taken to prevent future violations.

If you have any questions regarding the above subject matter, you may contact me or Captain Eric Indermill at (818)548-4030.

Very truly yours,

ATTENTION: Gordon L. Deane, President

SUBJECT: Termination of Discharge and Proper Disposal of  
Flammable Material

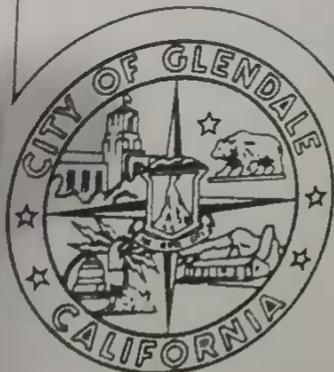

Dear Mr. Deane:

On January 5, 1998, two split samples of condensate wastewater from the subject facility were taken and analyzed for ignitability (Flash Point) by two different State certified laboratories. According to the Lab analysis results, one sample exhibited the characteristic of ignitability (Flash Point < 140°F) and the other did not. It is our intention at this point to base our decision by relying on the conservative result in order to protect and prevent any potential harm to the environment.

The Glendale Municipal Code (GMC), Article V, Section 13.40.310 prohibits the discharge of flammable materials to the sanitary sewer. Additionally, a material with a Flash Point below 140°F is also classified as being hazardous waste in accordance with California Code of Regulations (CCR) Title 22, Section 66261.21.

You are required to terminate the discharge of wastewater that meets the above criteria to the sanitary sewer, including the collected condensate wastewater in 10,000 gallons storage tanks.

In March and April of 1997, samples of condensate prior to its treatment also exhibited the characteristic of ignitability. In accordance with CCR, Title 22 any process treating waste with this characteristic must be performed under a Tiered Permit issued by this office.

Gentlemen:

This letter will serve to provide notice that the Self-monitoring grab sample of condensate wastewater from the subject facility, taken on November 18, 1997, was found to have an oil and grease content of 680 mg/L in violation of the local discharge limit for oil and grease of 600 mg/L.

You are required to immediately cease and desist from any and all violations of established local limits for discharge to the municipal wastewater system. You are also required to submit a detailed letter of explanation as to the cause of the above violation and description of corrective actions that will be taken to prevent future violations. Your letter must reach this office by January 5, 1998.

**THERE ARE 1 PAGES ACCOMPANYING THIS FAX INCLUDING THIS COVER SHEET. PLEASE CALL THE ABOVE TELEPHONE NUMBER SHOULD YOU RECEIVE FEWER PAGES**

Gentlemen,

Palmer Vendor Faxed the new data this afternoon showing their additional tankage. We needed this to complete the slab sizing. The data was sent on to the structural engineer who says he will complete his review with a stamp and signature Wednesday September 3, 1997. If he meets this schedule, we will pick it up tomorrow afternoon and bring it to the Building Department after the scheduled meeting, 8:00 Am with SCS on Thursday morning at the site

This new data increases the slab to 34' x 31'. It is not practical to place the filter press and any ancillary equipment inside the berm as you suggested to Pat. None of you have any idea of the quantity of solids expected. We have made some approximations, perhaps 250 to 400 lbs\*/day based on the SCS data and spec sent to the Palmer vendor. At this loading, a 60% cake moisture, and a 7 to 9 cu. ft. press, a forklift will be problematic inside a berm. It isn't done this way for heavier cake loads unless the press is placed on a raised structural platform. We suggest a small side slab 10' x 10' x 3" high curb is the best solution and it can be added later in that area south of the existing control panel.

\* 6,580 mgd x 4,000 gpd = 220 lb/d

CITY OF GLENDALE  
INTERDEPARTMENTAL COMMUNICATION

DATE September 10, 1998

TO Jake Amar, P.W. Engineering

FROM David Starr, Fire Marshal

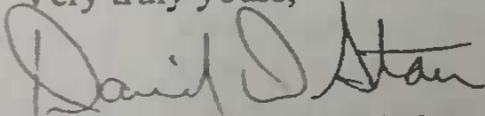

SUBJECT Scholl Canyon Landfill Gas Recovery Project  
Wastewater Sampling Requirements Clarification

In your conversation with Captain Indermill today you stated that a full test for all wastewater components is being completed prior to any batch discharge from this facility per our requirements. Unfortunately, there seems to have been a misunderstanding of what wastewater components needed to be tested.

Per our letter dated December 31, 1997, (copy enclosed) which documented the meeting of December 30, 1997, wherein you and Mr. Desi Alvarez of P.W. Engineering, Steve Cooper of S.C.S. Field Services, Captain Indermill and Inspectors Kitchen and Ahern were present. It was agreed at this meeting that the condensate would be batch treated and tested for compliance with local discharge limits for flammability prior to obtaining discharge authorization from this office. Furthermore it was agreed that if a batch analysis failed local limits for flammability then said batch shall be hauled off-site for legal disposal. Additionally, it was agreed that this would be a temporary solution until adequate pretreatment has been provided, full compliance with discharge limits has been achieved and approval granted from this office. Although, it was not discussed in the December 30, 1997 meeting, it was understood that S.C.S. Field Services would continue to test for all discharge requirements quarterly as required per the Industrial Waste Discharge Permit for this facility.

I hope that this letter clarifies the discharge requirements for the Scholl Canyon Landfill Gas Recovery Project at this time. If you have any questions regarding the above subject matter please contact me at ext. 4810. Please contact Captain Indermill at ext. 4030 to coordinate technical assistance from the EMC Staff.

Very truly yours,

  
David Starr, Fire Marshal

Subject: Untreated Waste Condensate Spill/Unauthorized Release  
3001 Scholl Canyon Road

Gentlemen:

On Oct. 21, 1998, at approximately 2:30 p.m. an incident occurred at the waste condensate storage tanks during a transfer of untreated waste condensate (condensate) from the storage tanks to an Asbury Environmental vacuum truck, resulting in the release of approximately 5,000 gallons of condensate. Although, this area is provided with an earthen berm equipped with a plastic liner as secondary containment, an uncontrolled release of condensate did occur by means of a large crack in the earthen berm. It is important to note that there were no SCS Field Services personnel supervising this transferring operation or on site at the time of the incident. Consequently, it was necessary for the operator of the vacuum truck to notify Los Angeles County Sanitation District (LACSD) staff onsite with regards to this incident. LACSD personnel in turn notified Glendale Public Works Engineering about the incident.

This office received a call from Jake Amar at 3:10 pm requesting that Inspector Ahern respond to Scholl Canyon Landfill as a result of this incident. Captain Indermill and Inspector Ahern arrived at the spill location at about 3:35 p.m. and met with Jake Amar, Glendale Public Works and Matt Zuro, Marty Zimlock both of LACSD. LACSD personnel had filled in the crack in the earthen berm to prevent any further release of condensate outside of the secondary containment. At this time there was about 1'-2' of free condensate inside of the secondary containment area, with condensate continuing to drain from one of the 10,000 gallon storage tanks through broken piping. Prior to the arrival of Captain Indermill and Inspector Ahern LACSD personnel closed the valves to isolate the leaking tank.

PRINTED ON RECYCLED PAPER

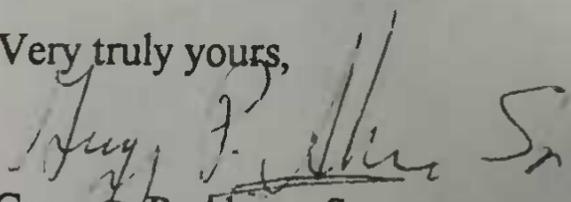

7128 29 30  
JUN 2000  
Received  
01121314

Brad Everett of SCS joined the above meeting at about 4:00 p.m. . At this meeting it was agreed that all free liquid would be removed, a deodorized would be put down and a plastic cover put over the spill area to minimize the odor problem for the night. Additionally, that additional cleanup would be done starting early the next morning. i.e. removal of storage tanks (unstable), cleanup of soil . . . etc.

Meeting Oct. 22, 1998, at approximately 3:30 p.m. Scholl Canyon Landfill, SCS Trailer. Greg Ahern and Vasken Demirjian, Glendale Fire, Jake Amar, Public Works Engineering and Ken Ayster of SCS Field Services. At this meeting it was clarified that as a CUPA the Fire Dept. was the responsible regulatory agency for this incident. It was further understood that your contractor, SCS Field Services was to submit a work plan to this office to determine the lateral and vertical extent of contamination that occurred as result of this unauthorized release. Additionally, that a detail letter of explanation as to the cause of the incident must be submitted to this office. It is recommended that all cleanup work be completed prior to the start of the rainy season in order to prevent further migration of contamination.

As of this date no work plan or letter of explanation has been received by this office. It is necessary that a work plan and letter of explanation be submitted to this office by November 30,1998.

Very truly yours,

  
Gregory P. Ahern, Sr.  
Inspector

**Subject: Detailed Letter of Explanation for Notice of Violation Dated May 24, 2000  
Permit No: W-3142 -- Received May 30, 2000**

Dear Mr. Ahern:

We are in receipt of the Notice of Violation as dated above. As you know, we are very concerned about proper operation of our facility and take our environmental responsibilities seriously. We endeavor to operate within the limitations of our environmental permits, including following all permit monitoring requirements.

Immediately after your discussions with the Plant operator, Brad Everett, on April 19<sup>th</sup>, Brad initiated flammability sampling of the discharge effluent on April 20<sup>th</sup>. On April 21<sup>st</sup> the results of the testing, which were negative, were faxed to your office. We will continue to test for flammability on a quarterly basis as required by our waste discharge permit.

Upon review of the monitoring events and the subject waste permit, it appears that the testing for flammability was not performed due to our confusion about the requirement for testing. The monitoring requirement appears on page 7 of the permit, but is placed under what appears to be a heading for a different section: Total Toxic Organic Management Plan. Due to our confusion about its placement in the permit, the plant operator did not realize that flammability was a required testing parameter.

We apologize if we have caused you any difficulty and as stated above we will included flammability testing in all future quarterly testing. If you have any questions please feel free to call me at (425) 635-1101.

Sincerely,

David A. Marques  
Vice President

3001 Scholl Canyon LANDFILL.

On: 12/20/99 an inspection was made of the above referenced property.

Your attention is called to the following item(s) which must be corrected in order to meet the minimum requirements for fire and life safety:

① CEASE AND DESIST AT ONCE FROM DISCHARGING  
WASTEWATER FROM WITHIN THE CONTAINMENT AREA TO  
TO SEWER VIA THE CLEAN-OUT NEXT TO THE TRAILER.  
WATER COLLECTED INSIDE OF THE CONTAINMENT AREA IS  
CONSIDERED AS CONTAMINATED AND SHALL BE TREATED  
AS SUCH, UNLESS PROVEN OTHERWISE BY LABORATORY RESULTS.  
[SUMP PUMP WITH HOSE LEADING INTO SEWER CLEAN-OUT,  
SUMP IS FULL OF OIL.]

② CAP AND SEAL SEWER CLEAN-OUT.

You are hereby notified to correct the condition(s) listed above. A reinspection will be made on or about Immediately.  
Failure to comply with this notice may result in a legal action being filed against you by the City Attorney.

Inspector: Gregory Ahern Phone: (818) 548-4000 Telephone Hours: 7:30 - 8:30 a.m. and 4:30 - 6:00 p.m.

Subject: NOTICE OF VIOLATION  
Scholl Canyon Landfill Gas Recovery Project  
3001 Scholl Canyon Road

Gentlemen:

This letter will serve to provide notice that the POTW grab sample of condensate wastewater from the subject facility, taken on September 22, 1997, was found to have an oil and grease content of 965 mg/L in violation of the local discharge limit for oil and grease of 600 mg/L. This sampling was conducted as a result of the previously reported flash point violation of August 15, 1997.

During this sampling tour it was found that only one (1) carbon filter was being used to treat the wastestream. Since the two (2) carbon filtration units are acting as the only oil removal system it is imperative that both units be in operation when the system is discharging.

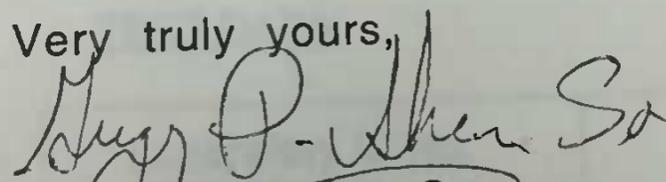

RECYCLED PAPER

You are required to immediately cease and desist from any and all violations of established local limits for discharge to the municipal wastewater system. You are also required to submit a detailed letter of explanation as to the cause of the above violation and description of corrective actions that will be taken to prevent future violations. Your letter must reach this office by October 20, 1997.

Additionally, you are required to resample the wastestream for oil and grease within 30 days of receipt of this letter to show compliance with local discharge limits.

If you have any questions regarding the above violation you may contact Doug Kitchen or myself at (818)548-4030.

Very truly yours,

  
Gregory P. Ahern, Sr.

**SUBJECT: NOTICE OF VIOLATION, SCHOLL CANYON LFG LIMITED PARTNERSHIP,  
3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

Dear Greg:

The Scholl Canyon LFG Limited Partnership (SC-LP) was recently issued a Notice of Violation (NOV, dated October 2, 1997) for violation of its effluent limitation for oil and grease, which occurred September 22, 1997, during grab sample collection by the City of Glendale. This response to the NOV is provided by SCS Engineers (SCS) on behalf of the SC-LP in accordance with Industrial Waste Discharge Permit (W-3142).

Analytical results from the September 22, 1997 sampling event indicated that the condensate from the treatment system had an oil and grease content of 965 mg/L, 365 mg/L above the discharge limitation of 600 mg/L. As mentioned in the NOV, this violation occurred due to the fact that only one carbon filter was being used to treat the wastestream at the time of sample collection. At that time, one of the two carbon filters normally in operation was not on-line as a result of a broken filter inlet. The sampling performed by the City of Glendale occurred during the time period between the broken canister being taken off-line and the delivery of a new carbon canister. A timeline for the events surrounding the carbon unit replacement is presented below.

- **September 12, 1997** - Both carbon canisters were replaced following a spill event which occurred on September 11, 1997. The previous carbon canisters had become fouled with oil due to the spill event.
- **September 17, 1997** - One of the carbon canisters was taken off-line due to a broken filter inlet. A new carbon canister was ordered immediately after the broken carbon unit was taken off-line.
- **September 24, 1997** - The new carbon unit was delivered and replaced.

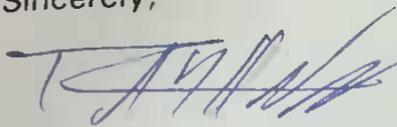

In order to prevent further incidents of this type from occurring, and as a further measure to reduce the volatile organic content of the wastestream, SC-LP will arrange to have a third carbon unit integrated into the existing system as an interim measure until the new treatment system is brought on-line.

ing Ahern  
ber 17, 1997  
ge Two

The required re-sampling will be conducted during the week of October 20-24, 1997, as set forth in the NOV and by SC-LP's revised Industrial Waste Discharge Permit (W-3142). Please address any questions or comments related to this submittal to our office.

Sincerely,

Ray Huff, R.E.A.

Gentlemen:

This letter will serve to provide notice that the Self-monitoring grab sample of condensate wastewater from the subject facility, taken on November 18, 1997, was found to have an oil and grease content of 680 mg/L in violation of the local discharge limit for oil and grease of 600 mg/L.

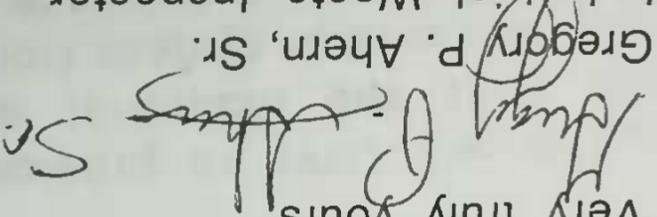

You are required to immediately cease and desist from any and all violations of established local limits for discharge to the municipal wastewater system. You are also required to submit a detailed letter of explanation as to the cause of the above violation and description of corrective actions that will be taken to prevent future violations. Your letter must reach this office by January 5, 1998.

PRINTED ON RECYCLED PAPER

Additionally, you are required to resample the wastestream for oil and grease by January 8, 1998, to show compliance with local discharge limits.

If you have any questions regarding the above violation you may contact Doug Kitchen or myself at (818)548-4030.

Subject: NOTICE OF VIOLATION  
3001 Scholl Canyon Road

Gentlemen:

This letter will serve to provide notice, and does hereby so provide, that the industrial wastewater discharge to the municipal wastewater system from the subject facility has been found to be a public nuisance, in violation of GMC Section 13.40.310(B)(1)(a)(v).

On Wednesday April 23, 1997, Inspectors Ahern and Kitchen responded to the subject facility as a result of an odor complaint in Glenoaks Canyon. SCS Field Staff were advised of the complaint and were informed that all condensate wastewater discharge must immediately cease until adequate pretreatment was provided.

On Friday April 25, 1997, Inspector Kitchen once again responded to the subject facility as a result of additional odor complaints. He found that wastewater was being discharged and that no repairs to the pretreatment system had occurred. Again SCS Field Staff were informed that all condensate wastewater discharge must immediately cease.

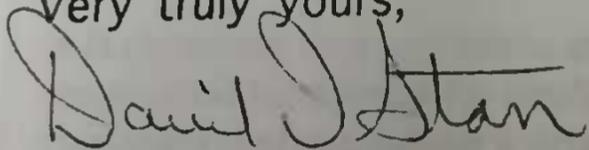

Please cease and desist immediately from any and all violations of established local limits for discharge to the municipal wastewater system. All industrial wastewater from the subject facility shall be hauled off-site for legal disposal until such time that adequate pretreatment has been provided and full compliance with discharge limits has been achieved. A manifest file, which shall be available for inspection at all times, shall be maintained for proof of legal disposal of all hauled wastewater.

Our policy requires that you submit a detailed description of corrective actions that will be taken to prevent future violations. We should receive your response no later than May 15, 1997.

At your option, you may provide the above required pretreatment or permanently haul the condensate wastewater for legal off-site disposal.

If you have any questions regarding this matter, please contact the Industrial Waste Program at (818) 548-4030.

Very truly yours,

David D. Starr  
Fire Marshal

Subject: NOTICE OF VIOLATION  
Scholl Canyon Landfill Gas Recovery Project  
3001 Scholl Canyon Road

Gentlemen:

This letter will serve to provide notice that the self-monitoring grab sample of condensate wastewater from the subject facility, taken March 13, 1997, was found to contain an Oil/Grease (O&G) content of 732 mg/L and a Total Toxic Organics (TTO) content of 4.5 mg/L both in violation of their local discharge limits of 600 mg/L and 2.0 mg/L respectfully.

It is necessary that you cease and desist immediately from any and all violations of established local limits for discharge to the municipal wastewater system. It is also necessary that you submit a detailed letter of explanation as to the cause of the above violations and a description of corrective actions that will be taken to prevent future violations. It is necessary that your response be submitted to this Office prior to April 28, 1997, to be considered timely.

As required Patrick Sullivan of SCS Engineers notified this Office of these discharge violations. During this conversation the cause of these violations were reviewed. It was agreed that the most probable cause of these violations was that the existing oil water separator was undersized and inadequate to handle the "new oil removal system". It is imperative that the oil water separator be adequately sized and capable of preventing any bypass of flocculated oil which will cause this facility to be in violation of local wastewater discharge limits.

Subject: NOTICE OF VIOLATION  
Scholl Canyon Landfill Gas Recovery Project  
3001 Scholl Canyon Road

Gentlemen:

This letter will serve to provide notice that the self-monitoring grab sample of condensate wastewater from the subject facility, taken on August 15, 1997, was found to have a flash point of 131<sup>o</sup> fahrenheit in violation of local prohibitive discharge limits.

It is necessary that you cease and desist immediately from any and all violations of established local limits for discharge to the municipal wastewater system. It is also necessary that you submit a detailed letter of explanation as to the cause of the above violation and a description of corrective actions that will be taken to prevent future violations.

It is important to note that the Third Quarter Compliance Report for 1997 stated "that Scholl Canyon is in full compliance with discharge limitations set forth in its industrial waste discharge permit (W-3142)." Once the Third Quarter Compliance Report was reviewed by this office it was found that the above statement was in error. The above violation was reviewed with

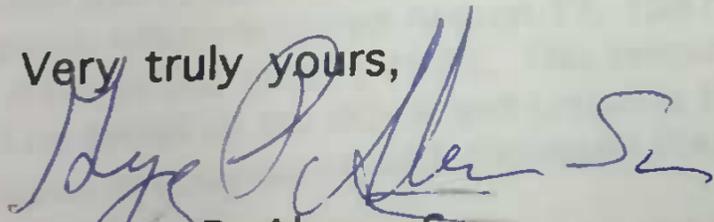

Mr. Ray Huff from SCS Engineers who stated that he was unaware of a discharge limitation on flash point for the subject location.

Upon further review of the third quarter sample results it was found that the sample was not analyzed for flash point until six (6) days after sampling.

It is important to note that due to the volatile nature of the constituents found in the sample, the analysis for flash point be done immediately so that the data reflects the true nature of the sample and that the sample is not allowed to degrade.

If you have any questions regarding the above violation you may contact Doug Kitchen or myself at (818)548-4030.

Very truly yours,

**SUBJECT: NOTICE OF VIOLATION, SCHOLL CANYON LFG LIMITED PARTNERSHIP,  
3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

Dear Greg:

The Scholl Canyon LFG Limited Partnership (SC-LP) was recently issued a Notice of Violation (NOV, dated September 26, 1997) for violation of its effluent limitation for flashpoint, which occurred August 15, 1997, during self monitoring for the third quarter (July through September) 1997. This response to the NOV is provided by SCS Engineers (SCS) on behalf of the SC-LP and presents the analytical results from re-sampling activities conducted in accordance with Industrial Waste Discharge Permit (W-3142).

Analytical results from the August 15, 1997 sampling episode indicated that the condensate from the treatment system had a flashpoint of 131° Fahrenheit, 9° lower than the discharge limitation of 140°. This violation occurred due to the fact that a significant volume of oil and oil sludge had accumulated in the holding tanks. During discharge, a portion of this oil was inadvertently processed through the carbon adsorption unit, reducing its effectiveness. The fouled carbon did not adequately remove volatile organics from the waste stream. These volatiles caused the sample to fail the flashpoint test.

To correct this problem, SC-LP recently removed all floating oil and sludge from the holding tanks. We have also implemented an operational change in which we will periodically remove oil and sludge from the tanks to prevent accumulation. SC-LP feels that this operational change will minimize the potential for fouling of the carbon with oil.

The required re-sampling was conducted on October 3, 1997, as soon as possible following notification by the City of Glendale of a reporting error on the Third Quarter Sampling Compliance report. Re-sampling was conducted as set forth by SC-LP's revised Industrial Waste Discharge Permit (W-3142).

Gentlemen:

This letter will serve to provide notice, and does hereby so provide, that the POTW grab sample of condensate wastewater from the subject facility, taken on December 19, 1997, was found to have a flash point of 81<sup>0</sup> Fahrenheit in violation of local prohibitive discharge limits of 140<sup>0</sup> Fahrenheit. Additionally, this sample was found to contain an oil and grease content of 1524 mg/L and a dissolved sulfides content of 4.54 mg/L in violation of their local discharge limits of 600 mg/L and 0.1 mg/L respectfully.

On December 30, 1997, your representative at this facility Mr. Steve Cooper of SCS Field Services was advised of the above violations and was instructed to cease discharge of the condensate to the municipal wastewater system. Per our conversation with Mr. Cooper of SCS Field Services, Mr. Jake Amar and Mr. Desi Alvarez of Glendale P.W. it was agreed that the condensate would be batch treated and tested for compliance with local discharge limits for flammability prior to obtaining discharge authorization from this office. Furthermore it was agreed that if a batch analysis failed local limits then said batch shall be hauled off-site for legal disposal. Additionally, it was agreed that this would be a temporary solution until the cause of the violations have been determined, adequate pretreatment has been provided, full compliance with discharge limits has been achieved and approval granted from this office.

**SUBJECT: NOTICE OF VIOLATION, SCHOLL CANYON LFG LIMITED PARTNERSHIP,  
3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

Dear Greg:

The Scholl Canyon LFG Limited Partnership (SC-LP) was recently issued a Notice of Violation (NOV, dated December 31, 1997) for violation of its effluent limitation for flash point, dissolved oil and grease, and dissolved sulfides, which occurred December 19, 1997, during grab sample collection by the City of Glendale. This response to the NOV is provided by SCS Engineers (SCS) on behalf of the SC-LP in accordance with Industrial Waste Discharge Permit (W-3142).

Analytical results from the December 19, 1997 sampling event indicated that the condensate from the treatment system had a flash point of 81° Fahrenheit, dissolved oil and grease content of 1,524 mg/L and a dissolved sulfides content of 4.54 mg/L. These levels are all in exceedance of the appropriate discharge limitations of > 140° Fahrenheit for flash point, 600 mg/L for oil and grease, and 1.0 mg/L for dissolved sulfides. SC-LP believed that these violations, as well as the numerous violations that have occurred during 1997, are a result of the inadequacy of the existing wastewater treatment system. Further, it is believed that the pending upgrade to the condensate treatment system will solve the numerous violations problems that have become a more common occurrence.

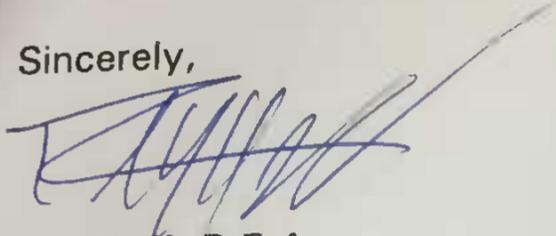

Therefore, as of January 6, 1998, SC-LP has temporarily ceased discharging condensate to the publicly owned treatment works (POTW) sewer system, to expedite the upgrade of the condensate treatment system. The accumulated condensate on-site has been hauled away for proper disposal. Once the proper manifests have been returned to SC-LP, copies will be made available to the City of Glendale for your reference.

Further it should be noted that SC-LP's intent was to only temporarily cease discharge to the POTW and to resume discharge after the completion of the new condensate treatment system at the Scholl Canyon LFG compression station. However, due to the failure of the Fire Department to approve the plans, construction has been suspended.

3001 Scholl Canyon Road

Gentlemen:

This letter will serve to provide notice, and does hereby so provide, that your failure to sample the waste effluent for flammability during the four quarter of 1999 and the first quarter of 2000 is in violation of the Industrial Waste Permit Monitoring requirements for the subject facility. The above violations were brought to the attention of your Plant Manager Bradley Everett.

It is necessary that you immediately cease and desist at once from any and all violations of established permit monitoring requirements for the subject facility. You are hereby required to submit within 20 days of receipt of this notice of violation a detail letter of explanation as to the cause of the above violations and corrective actions that will be taken to prevent future violations.

An office hearing regarding these violations has been set for 10:00 am Tuesday May 30, 2000, at the Environmental Management Center 780 Flower Street, Glendale CA. It is necessary that yourself or your representative(s) be present at the office hearing to review the cause of these violations and corrective actions taken to prevent future violations.

If you have any questions regarding the above subject matter you may contact Captain Eric Indermill at (818)548-4030.

Very truly yours,

Steve L. Howard,

**SUBJECT: RE-SAMPLING REPORT, SCHOLL CANYON LANDFILL GAS LIMITED PARTNERSHIP, 3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

To Whom It May Concern:

The Scholl Canyon Landfill Gas Limited Partnership recently reported a violation of its effluent limitation for dispersed oil and grease which occurred during self monitoring for the second quarter (April through June) 1997. This letter presents the analytical results from re-sampling activities conducted in accordance with Industrial Waste Discharge Permit (W-3142).

Resampling was conducted, and analytical data reported as soon as possible following the repair of the carbon filtration system which resulted in excessive levels of dispersed oil and grease reported for the second quarter sampling round. During the re-sampling a grab sample was collected from Sampling Point 01 and analyzed for dispersed oil and grease by EPA Method 413.2.

Based on analytical data generated during resampling, Scholl Canyon is in compliance with discharge limitation for TTOs, as set forth in its Industrial Waste Discharge Permit (W-3142).

Please address any questions or comments related to this submittal to our office.

Sincerely,

Ray Huff, REA

INDUSTRIAL WASTE PROGRAM

TEST REPORT

Two grab samples from Scholl Canyon Landfill were tested for flash point for the City of Glendale. Sample No. 97-000368 was collected from the sample spigot prior to pre-treatment at Scholl Canyon/SCS Engineers on April 9, 1997 at 1253 hours. Sample No. 97-000369 was collected from the sample spigot prior to pre-treatment at Scholl Canyon/LA County on April 9, 1997 at 1329 hours.

Both samples were collected by Greg Ahern and delivered to the laboratory on April 9, 1997 at 1405 hours by Greg Ahern and Doug Kitchen. Flash point analysis was performed in accordance with ASTM Method D93-90, "Standard Methods for Flash Point by Pensky-Martens Closed Tester".

**Subject: Proposed Temporary Treatment for Landfill Gas Condensate Disposal from Gas Processing Facility**

Gentlemen:

As you know, according to several of the lab analyses from last week's sampling of the condensate from our gas processing facility at the Scholl Canyon Landfill, sulfides appear to be present in our untreated (except for stripping) condensate. Further, the lab analyses indicate the presence of certain organics [e.g., acetone and 2-butanone (aka MEK)] which the City has indicated is a prohibited discharge under a City ordinance without a permit. Currently, our permit does not address these compounds.

To expedite a temporary solution to this problem which avoids a shutdown of the project, we propose implementing the following procedures as soon as we have your approval to do so:

1. To reduce sulfides in the condensate, we will treat the raw condensate in the same manner as currently being implemented by the Los Angeles County Sanitation Districts (i.e., adding chloride on a batch basis) immediately prior to discharge. We will plan to add an excess of chlorine and test for chlorine levels as per instructions from SCS Engineers.
2. To reduce the organics, we will:
  - a. continue to run the condensate through the stripper since the preliminary SCS reports suggest a 40 to 70% reduction in MEK and acetone, respectively;
  - b. add a temporary pre-treatment system using 2 carbon beds in series which will further process the post-stripper condensate prior to discharge. We believe the two carbon beds (each with a footprint of 4'x4') can be installed within the diked area by the air stripper. The carbon beds will be piped in series with a sampling point between them and with piping/pumping to allow us to use either bed first so they may be switched to always have the newest bed as the last (polishing)

LETTERS 11

bed in the series (see below for operating conditions). We recognize that the chlorine may cause some conversion (especially acetone) to chloroform but we have been told that the chloroform is actually easier to remove by the carbon beds than the acetone.

According to Wheelabrator/Westates Carbon, the carbon consumption is projected to be 35-60 lbs of carbon per 1000 gallons of condensate (see analysis attached). Using these numbers, with approximately 30,000 gallons on site (10,000 at the stripper and 20,000 in the Baker tank), the projected carbon consumption is 1050 to 1800 lbs. Therefore we would propose to install 2-1000 lb. carbon beds in series and operate as follows:

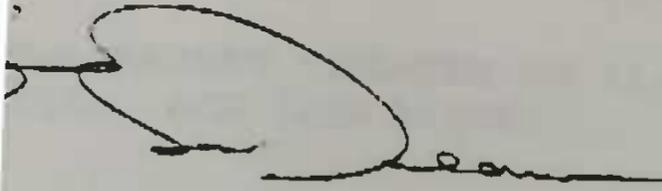

- A. We would run 15,000 gallons through the beds and then sample at the effluent of both beds. Grab samples (not 24-hour composites) will be taken and samples will be analyzed for total toxic organics ("TTOs") -- the total to include acetone and MEK. Analyses will be conducted by SCS Analytical Laboratory unless the City wants to conduct its own sampling and analyses at its cost, in which case we will use the City's numbers.
- B. If the discharge level from the first bed is within the permit level of 2 mg/l for TTOs (i.e., no "breakthrough"), another 7500 gallons will be discharged and the sampling and analysis will then be repeated.
- C. If there is breakthrough of both beds, they will both be replaced and another 7500 gallons will be discharged before sampling and analysis. (This iteration will continue until we can achieve a sampling frequency which indicates the first bed has broken through but not the second one.)
- D. If the analysis indicates there is breakthrough of the first bed but not the second bed, the second bed will become the first bed and the second bed will be replaced with a fresh bed.
- E. Again the discharge will continue at half the prior discharge level with the same iterations of sampling and analysis until we can reasonably determine the life of the first bed.
- F. Once the life of the first bed is determined, the sampling and analysis for the effluent of the first bed will be conducted at the projected half-life level, three-quarter life level and the end-life level, with testing frequency reviewed periodically based on recent history.

The above approach, by which the discharge level is measured prior to the polishing bed, should always keep SC-LP within a TTO limit of 2 mg/l, including any acetone and MEK that is found.

Based on the results of this program, Scholl Canyon LFG Limited Partnership (SC-LP) may suggest alternate programs in the future. Further, while SC-LP is proposing to undertake the above program in a good faith effort to promptly address the issues and concerns raised by the City, SC-LP is reserving its rights to petition the City for permits to dispose of these compounds at some other level as part of its industrial waste discharge permit.

If the above approach meets with your approval, please provide your concurrence as soon as possible so that we can implement the above program and prevent a shutdown and/or unnecessary costs and aggravation to the project.

Continued cooperation on this program is much appreciated.

Subject Condensate Disposal

As a follow-up to our meeting today with LACSD our earlier proposal should be amended with respect to the temporary hook-up. Specifically - SC-LP would prefer to do the following for the temporary hook-up.

(1) SC-LP will install a pump and temporary storage tank at the top of the hill with a drain from the tank to the current condensate line at the north side of the flare.

We feel this option, which appeared somewhat acceptable to LACSD earlier today, has the following operational advantages:

- (a) there is not much space down by the current stripper system and it cannot be easily monitored;
- (b) installation will not require cutting pavement again and another road crossing to install a dedicated drain line;
- (c) our operator will be able to visibly monitor the level of the tank as well as valves controlling the flow;
- (d) in case of problems with the LACSD pump in the drain line (which appeared to be LACSD's biggest concern about this option), there will be approximately 3 days storage, more than enough to allow LACSD to fix the pump.

I hope this is acceptable to the City and LACSD. We thank you for your assistance on this matter.

Subject: *Condensate Disposal*

On April 27, at a meeting at the Scholl Canyon landfill including representatives from Scholl Canyon Landfill Gas Limited Partnership (SC-LP), the County Sanitation Districts of Los Angeles (LACSD) and ARB, Inc., LACSD proposed the following temporary and permanent means of handling condensate from the gas processing facility (GPF) being installed by SC-LP as ones which would be acceptable to LACSD. SC-LP indicated that the proposal would be acceptable to it assuming (a) the City (including its industrial waste division) concurs and (b) SC-LP's review of the condensate data and the air stripper manual did not result in any major surprises. SC-LP volunteered to summarize the proposed agreement and to circulate it to the City and LACSD for comment and eventual sign-off. The following is that summary with bracketed items indicating further thoughts by SC-LP for which LACSD and City comments and/or concurrence are sought.

### Temporary

From the time of start-up of the GPF until such time (estimated to be within 6 months from now) as LACSD establishes a new system for handling, processing and disposal of condensate collected upstream of the GPF, SC-LP and LACSD would agree that:

- 1) SC-LP would collect and store condensate generated by the GPF in a temporary storage facility (approximately 10,000 gallon capacity) to be located near the GPF in accordance with the design submitted to LACSD and City on April 22 and attached hereto as Exhibit A.
- 2) SC-LP would connect the outlet of the temporary storage facility to the existing air stripper by a dedicated, above ground (except for road crossings) pipeline (HDPE or better and steel encased for road crossings) following the 18" header routing and using its supports. The connection would be pre or post LACSD's pump, depending on pressure and control requirements. In this manner, the condensate stream from the GPF would be isolated from the condensate stream from the gas collection system.
- 3) SC-LP would assume ownership of the complete existing condensate air stripper system without cost. The existing system includes two 10,000 gallon tanks, an air stripper, all pumps and controls necessary for its operation to process condensate, a meter for measuring

1685-0203  
LA 02025  
PWP

WD-LENDA

the flow of condensate to the sewer, and the sewer connection. [There may be a question regarding exactly when ownership changes hands if a new SCAQMD permit or other permits are required first. SC-LP would appreciate receiving from LACSD a list of all equipment and copy of all permits applicable to the existing tanks and stripper system.]

- 4) SC-LP would use the existing air stripper without cost on a regular basis for the batch processing and disposal of condensate from the SC-LP via the same 6" sewer connection as currently exists. Its condensate could be sampled at the same sample box location. [Since SC-LP has only one waste water stream, 24-hr composites should not be necessary. SC-LP may have only one discharge per day.]
- 5) SC-LP would be liable for all damage or repairs caused solely by SC-LP's operation of the system or by any fouling of the system due to processing of the GPF condensate should LACSD be the operator during the interim period. In the event the equipment becomes inoperable for any reason, SC-LP and LACSD would each be responsible for arranging alternate disposal for their own condensate.
- 6) LACSD would continue to use the existing tanks and air stripper system for storage, processing and disposal of its condensate without cost or expense to SC-LP and without additional cost to LACSD (i.e., other than costs now being incurred) until LACSD establishes its new condensate storage, treatment and disposal facility. [SC-LP assumes that LACSD would be similarly responsible for any damage which it causes to the tanks and stripper system under its control.]
- 7) SC-LP would seek and obtain its own permit from the City of Glendale for disposal of the condensate from the GPF. [SC-LP would expect to obtain a permit for 3,500 gallons per day and with discharge limits and sampling and reporting requirements no more stringent than now imposed on LACSD. We expect that permit will require 10,000 gallons of storage (3 days) so that we may be able to use the proposed temporary tank; the permanent solution would also have a requirement for 10,000 gallons of storage. The extra tank SC-LP is acquiring and/or the space may be used by SC-LP for any additional gas processing that we may decide to implement.]
- 8) SC-LP would agree to store condensate from the GPF for a period of not less than 24 hours to allow LACSD to collect a 24-hr composite sample from its operation unaffected by condensate from the GPF.

3300

In addition to the above understandings, SC-LP has previously proposed to the City that it would sample the GPF condensate approximately 15 days after start-up of the GPF and would provide the City with a proposal for the permanent handling and any further processing of its condensate prior to disposal within 90 days of start-up. SC-LP would still plan to conduct such a testing and analysis program, recognizing that it may not be able to implement a permanent system until such time as LACSD moves its operation and relinquishes control of the tanks.

Permanent

When LACSD moves its processing station (expected to be within 6 months from now), SC-LP would then be allowed to:

- A) Remove its temporary storage tank and connect directly to the tanks at the current air stripper system;

CONDENSATE DISPOSAL (US/08/94) pg. 3 of 4

THE ABOVE UNDERSTANDING AGREED  
COUNTY SANITATION DISTRICTS OF LOS

- B) Have sole use thereafter of the 2 tanks (estimated capacity 20,000 gallons) and system and sole operating responsibility;
- C) Dispose of its processed condensate (assuming meeting permit conditions) through current sewer line hook-up and using the current flow meters located at the site. LACSD has indicated to SC-LP that it has no future plans for the property on which the current stripper system is located and does not foresee that SC-LP would be required to move it for any reason.

SC-LP will provide LACSD with 2 new tanks (comparable size and composition) for use in LACSD's new condensate processing system. The 2 tanks will be purchased and delivered at the time necessary for LACSD's construction of its new system.

SC-LP will be responsible for additional equipment and controls as the City may require be added to the current system (e.g., pH control) subsequent to LACSD's move.

SC-LP and LACSD shall negotiate in good faith to establish a flat monthly payment payable to LACSD by SC-LP for use of electricity by the stripper system (perhaps to be combined with a payment for water usage by the GPF).

Understanding

If the above summary is an accurate representation of an approach acceptable to LACSD and the City (including the City's industrial waste division), please indicate your acceptance below and return a copy to me. To expedite matters, this understanding may be executed in counterparts and is not binding on any party unless signed by all parties. The parties agree to cooperate in good faith to negotiate and execute any additional documents reasonably necessary to consummate this agreement. Given the status of the construction of SC-LP's project, SC-LP will plan to proceed with its construction plans relying on this understanding.

INDUSTRIAL WASTE ANALYSIS RESULTS

At the request of Gregory P. Ahern Sr., Industrial Waste Inspector, one sample was analyzed for possible chemical contamination.

Quantitative analysis for Volatile Organic Compounds was performed in accordance with EPA Method 8260A and Hazardous Waste characterization was performed using EPA Method 1311 - Toxicity Characteristic Leaching Procedure (TCLP).

Note 1: The results do not exceed the TCLP maximum concentration limit. A table comparing the analytical results with the TCLP limits is included.

Note 2: The Total Toxic Organic (Volatiles Only) of 4510 ppb (4.51 ppm) does exceed the regulatory discharge limit as established in the Code of Federal Regulations 40 Part 433.

Data sheets are attached.

Papkin K. Hovasapian, Director  
General Services/Standards

Describe Corrective Action Taken

The facility is an outdoor treatment system with passive vapor control system. The air emissions are not at trace levels only, well below the threshold concentrations that will have potential for harmful exposures to operators and visitors. Therefore, no respiratory protection program is required.

Action Taken to Prevent Recurrence

Maintain engineering controls to eliminate exposure to harmful vapors and airborne particulates.

|             |      |                     |         |                |          |

**SUBJECT: SUBMITTAL OF PERIODIC COMPLIANCE REPORT (PCR), FIRST  
QUARTER 1997, SCHOLL CANYON LANDFILL GAS LIMITED  
PARTNERSHIP, 3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA  
(W-3142)**

To Whom It May Concern:

Enclosed please find two copies of completed PCR forms and accompanying laboratory reports (with chain-of-custody documentation) for self-monitoring conducted at Scholl Canyon during the first quarter (January through March) 1997. During this round of self-monitoring, Sampling Point 01 (regulated quarterly) was monitored in accordance with Scholl Canyon's revised industrial waste discharge permit (W-3142, March 8, 1995). The enclosed document has been prepared by SCS Engineers (SCS) on behalf of the Scholl Canyon Landfill Gas Limited Partnership (SC-LP).

Based on analytical data generated during monitoring, it appears that SC-LP is in compliance with discharge limitations set forth in its industrial waste discharge permit (W-3142), with the exception of exceedances of the discharge limits for total toxic organics (TTO) (2.0 mg/L) and dispersed oil and grease (600.0 mg/L). Concentrations of 4.286 mg/L of TTO and 732 mg/L of dispersed oil and grease were detected in a grab sample collected from Sampling Point 01.

The excessive concentrations of TTO and dispersed oil and grease present in the condensate sample is most likely the result of the temporary failure of the carbon filtration units attached to the condensate outflow. This failure has been remedied by the replacement of the carbon canisters as well as the overhauling of the valve system attached to the carbon filtration system. SC-LP is already in the process of scheduling the necessary re-sampling event required by the permit.

Industrial Waste Section  
April 7, 1997  
Page Two

We are hopeful that this corrective safety strategy will be acceptable to the City of Glendale. Please note that the pending upgrade and re-location of the system to the compressor station area will further mitigate potential problems with TTOs and oil and grease.

Please address any questions or comments related to this submittal to our office.

Sincerely,

Ray Huff  
Project Scientist

**SUBJECT: SUBMITTAL OF INDUSTRIAL USERS QUARTERLY COMPLIANCE REPORT FORM, SECOND QUARTER 1996, SCHOLL CANYON LANDFILL GAS LIMITED PARTNERSHIP, 3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

To Whom It May Concern:

Enclosed please find two copies of completed Industrial Users Quarterly Compliance Report forms and accompanying laboratory reports (with chain-of-custody documentation) for self-monitoring conducted at Scholl Canyon during the second quarter (April through June) 1996. During this round of self-monitoring, Sampling Point 01 (regulated quarterly) was monitored in accordance with Scholl Canyon's revised industrial waste discharge permit (W-3142, March 8, 1995). The enclosed document has been prepared by SCS Engineers (SCS) on behalf of the Scholl Canyon Landfill Gas Limited Partnership.

Based on analytical data generated during monitoring, it appears that Scholl Canyon is in full compliance with discharge limitations set forth in its industrial waste discharge permit (W-3142). Please address any questions or comments related to this submittal to our office.

Sincerely,

Patrick S. Sullivan, R.E.A.

Gentlemen:

Enclosed please find a completed Industrial User's Quarterly Compliance Report Form for our site in Glendale. This report covers the period October 1, 1994-December 31, 1994. The appropriate supporting lab reports are attached.

As can be seen, the facility was in compliance throughout the quarter.

Should you have any questions, please feel free to call.

Sincerely,

A. Robert Russell III

**SUBJECT: SUBMITTAL OF PERIODIC COMPLIANCE REPORT (PCR), FIRST QUARTER 1995, SCHOLL CANYON LANDFILL GAS LIMITED PARTNERSHIP, 3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

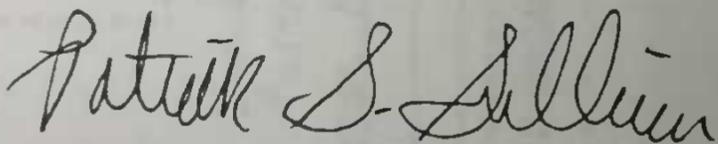

To Whom It May Concern:

Enclosed please find two copies of completed PCR forms and accompanying laboratory reports (with chain-of-custody documentation) for self-monitoring conducted at Scholl Canyon during the first quarter (January through March) 1995. During this round of self-monitoring, Sampling Point 01 (regulated quarterly) was monitored in accordance with Scholl Canyon's revised industrial wastewater discharge permit (W-3142, March 8, 1995).

Based on the data generated during sampling, it appears that Scholl Canyon is in full compliance with discharge limitations set forth in its industrial waste discharge permit (W-3142) at Sampling Location 01. Note that both grab and composite sampling were conducted as required by the permit.

Please address any questions or comments related to this submittal to our office.

Sincerely,

Patrick S. Sullivan, R.E.A.

**SUBJECT: SUBMITTAL OF PERIODIC COMPLIANCE REPORT (PCR), FOURTH QUARTER 1995, SCHOLL CANYON LANDFILL GAS LIMITED PARTNERSHIP, 3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

To Whom It May Concern:

Enclosed please find two copies of completed PCR forms and accompanying laboratory reports (with chain-of-custody documentation) for self-monitoring conducted at Scholl Canyon during the fourth quarter (October through December) 1995. During this round of self-monitoring, Sampling Point 01 (regulated quarterly) was monitored in accordance with Scholl Canyon's revised industrial waste discharge permit (W-3142, March 8, 1995). The enclosed document has been prepared by SCS Engineers (SCS) on behalf of the Scholl Canyon Landfill Gas Limited Partnership.

Based on analytical data generated during monitoring, it appears that Scholl Canyon is in compliance with discharge limitations set forth in its industrial waste discharge permit (W-3142), with the exception of an exceedance of the discharge limit for dissolved sulfides (0.1 mg/L). A concentration of 0.27 mg/L of dissolved sulfides was detected in a grab sample collected from Sampling Point 01.

Scholl Canyon is currently in the process of evaluating the cause of this violation. We will provide additional information on this issue as it becomes available. After review and evaluation of possible causes, Scholl Canyon will develop and implement a course of action for mitigation of the dissolved sulfide problem, if necessary. In the meantime, Scholl Canyon has conducted the necessary re-sampling required by the permit.

**SUBJECT: SUBMITTAL OF PERIODIC COMPLIANCE REPORT, RESAMPLING FOR  
TOTAL TOXIC ORGANICS, THIRD QUARTER 1995, SCHOLL CANYON  
LANDFILL GAS LIMITED PARTNERSHIP, 3001 SCHOLL CANYON ROAD,  
GLENDALE, CALIFORNIA (W-3142)**

To Whom It May Concern:

Enclosed please find two copies of completed periodic compliance report (PCR) forms and accompanying laboratory reports (with chain-of-custody documentation) for resampling conducted at Scholl Canyon on October 6, 1995. The enclosed documentation has been prepared by SCS Engineers (SCS) on behalf of the Scholl Canyon Landfill Gas Limited Partnership.

The recent resampling was conducted due to a violation of the effluent limitation for total toxic organics (TTOs) which occurred during self monitoring for the third quarter (July through September) 1995. Resampling was conducted and is herewith reported within 30 days of first becoming aware of the violation (October 3, 1995), as required by Scholl Canyon's revised Industrial Waste Discharge Permit (W-3142, March 8, 1995).

During the resampling, grab samples were collected from Sampling Point 01 (manhole location at bottom of canyon; Man-1) and a sampling port directly after the carbon adsorption unit (Carb-1). The two grab samples were analyzed for TTOs by EPA Method 625. Samples were not analyzed for EPA Method 624 or 608 compounds since the previous violation was due entirely to bis-2-ethylhexylphthalate, a EPA 625 compound.

Based on analytical data generated during resampling, Scholl Canyon is in compliance with discharge limitation for TTOs, as set forth in its Industrial Waste Discharge Permit (W-3142). In addition, there does not appear to be any difference in the water quality between the two sampling locations.

Scholl Canyon is unsure of the source of bis-2-ethylhexylphthalate which caused the aforementioned violation. This compound had never been detected at the site in previous monitoring rounds.

Glendale, California 91206-4388

Attention: Industrial Waste Program

**SUBJECT: SUBMITTAL OF PERIODIC COMPLIANCE REPORT (PCR), THIRD QUARTER 1995, SCHOLL CANYON LANDFILL GAS LIMITED PARTNERSHIP, 3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

To Whom It May Concern:

Enclosed please find two copies of completed PCR forms and accompanying laboratory reports (with chain-of-custody documentation) for self-monitoring conducted at Scholl Canyon during the third quarter (July through September) 1995. During this round of self-monitoring, Sampling Point 01 (regulated quarterly) was monitored in accordance with Scholl Canyon's revised industrial waste discharge permit (W-3142, March 8, 1995). The enclosed document has been prepared by SCS Engineers (SCS) on behalf of the Scholl Canyon Landfill Gas Limited Partnership.

Based on analytical data generated during monitoring, it appears that Scholl Canyon is in compliance with discharge limitations set forth in its industrial waste discharge permit (W-3142), with the exception of an exceedance of the discharge limit for total toxic organics (TTOs; 2.0 mg/L). 5.76 mg/L of bis-2-ethylhexylphthalate (a TTO) was detected in a grab sample collected from Sampling Point 01.

Scholl Canyon is unsure of the source of this contaminant; bis-2-ethylhexylphthalate has never been detected at the site in previous monitoring rounds. In order to best evaluate possible corrective actions, Scholl Canyon proposes to investigate potential source(s) of bis-2-ethylhexylphthalate in landfill gas condensate. In this regard, Scholl Canyon requests assistance from the City of Glendale in identifying contaminant source(s). If possible, we would like to review monitoring data submitted by the Los Angeles County Sanitation Districts for condensate from Scholl Canyon landfill.

In this way, we can determine whether a TTO problem exists or whether the detected TTO concentration was a sampling/analytical anomaly. After review of existing monitoring data and plant operating parameters, Scholl Canyon will develop and implement a course of action for mitigation of the TTO problem, if necessary. In the meantime, Scholl Canyon has conducted the necessary re-sampling required by the permit.

## EXPRESS TRANSMITTAL MEMORANDUM

Please deliver the following pages to:

NAME: Greg Ahern  
COMPANY: Glendale Industrial Waste  
CC: Kerry Morford, Steve Zurn  
COMPANY: Glendale Public Works Department  
CC: Jim Bier  
COMPANY: SCS Field Services

FROM: Gordon L. Deane  
SUBJECT: CONDENSATE REPORT

This is to follow-up on our phone conversation yesterday discussing the recent condensate sampling from our gas processing station. As we discussed:

- 1 Since we have a temporary permit, we have no permit number. Therefore, we will simply write temporary permit on the form.
- 2 Despite specific instructions provided to them, SCS did not notify the City before sampling. You indicated you thought the City could overlook this transgression. SCS has been notified to not allow this to happen again.
- 3 The summary of the report which was received late on Wednesday is attached. We do not yet have the actual lab results, which will be forwarded to you when received.
- 4 As noted on the report, all items reported on the form are well within the limits of the permit except for Dispersed Oil & Grease. The exceedance due to oil and grease is thought to be due to a couple of conditions: (A) As you know, during start-up of the compressors, much more oil is used than during routine operation. The start-up level of oil is 10 gallons per compressor per day. Compressor B has had its oil consumption lowered recently to around 3 gallons/day. Compressor A, which has had less run time, is down to 8 gallons/day; we expect compressor A's oil consumption will continue to drop. (B) The extra oil consumed during start-up has also lead to a foaming action, causing emulsification of oil with the condensate. Therefore, the use of the Baker tank is less efficient than we had originally thought.
- 5 Both reduced oil consumption and less emulsification should help to lower the levels of oil and grease. Also, we have arranged for the removal of the oil in the Baker tank to try to help improve the separation efficiency and generally reduce the amount of oil in the system.
- 6 Further, since it appears that LACSD will not start construction of its new condensate system before December, we have proceeded to specify, and plan to order soon, an oil/water separator. I already have a proposal but have asked the engineers for some design changes to make operation easier. We would hope to place an order before the end of the month with installation in 6-8 weeks.
- 7 As required, we will plan to re-test the condensate within 30 days simply for oil and grease and report those findings to you.

Thank you for your cooperation and assistance on this matter. Feel free to call me if you have any questions.

**SUBJECT: SUBMITTAL OF PERIODIC COMPLIANCE REPORT (PCR), SECOND  
QUARTER 1995, SCHOLL CANYON LANDFILL GAS LIMITED  
PARTNERSHIP, 3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA  
(W-3142)**

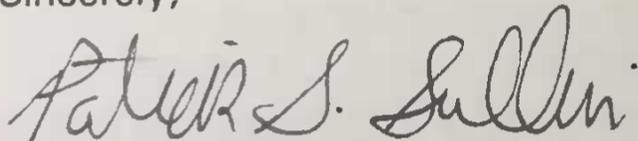

To Whom It May Concern:

This letter is to inform you that the Scholl Canyon Landfill Gas Limited Partnership (SCLP) was unable to complete quarterly monitoring for the second quarter of 1995 due to an unforeseen situation. Based on a telephone conversation with Inspector Greg Ahern (June 22, 1995), SCS Engineers (SCS) submits the enclosed letter on behalf of the SCLP in order to explain the present situation.

SCLP was recently issued a Cease and Desist Order from the City of Glendale due to odor complaints. Therefore, until further notice, SCLP is not permitted to discharge landfill gas condensate to the sanitary sewer system. As such, SCLP cannot complete the required quarterly monitoring prescribed in its industrial wastewater discharge permit.

In the future, SCLP will make every effort to complete its quarterly monitoring earlier in the monitoring period so that these unforeseen situations do not prevent us from completing the necessary sampling. Please address any questions or comments related to this submittal to our office.

Sincerely,

Patrick S. Sullivan, R.E.A.  
Project Scientist

Subject: Industrial Waste Discharge Permit Revision W-2762, Scholl Canyon Landfill

Dear George:

*Whoops!*

Sitting on my desk was the enclosed requested receipt for the subject permit which was supposed to be returned by April 5, 1995. While I had discussed the permit and the receipt with Kerry and Steve the last time I was in California, I carried it back to the office and there it sat again. Fortunately, my oversight has not stopped SCS from addressing the requirements of the permit which had been immediately sent on to them. Based on recent correspondence, it appears that the plans are moving ahead. Also, odor problems appear to have been addressed. We will continue to monitor the situation.

With respect to the permit, SCS has answered most of my questions on how we address the monitoring issues in the permit. However, to my knowledge, there are still two unresolved questions.

The first is the issue of the maximum daily discharge of 3300 gallons per day which is mentioned in Part 1, paragraph A. As you probably know, since LACSD and Scholl Canyon LFG Limited Partnership are currently using the same condensate disposal system, the practice has been to hold condensate and only discharge on certain days when LACSD is not using the system. This practice has been condoned by the City as long as our average daily discharge is not in excess of 3300 gallons per day. We prefer to continue to have the flexibility to operate in this manner even after we are separated from the LACSD system. By allowing this flexibility, we can better respond to issues such as odor that have arisen in the past when there are questions of the source since we can suspend disposal and check for cause and effect. Also, this flexibility gives us a better opportunity to have the disposal occur while the system is being manned.

12/16/94

15:18

310 492 6210

SCS FIED SERV

001/003

Also, under Part 4, paragraph D, it states that the pH chart must be initialed daily by an operator of the facility. We have no problem doing this but only on days when the facility is manned. Once the compressor problems are behind us, we do not expect the facility to be manned on a daily basis.

I hope these understandings are acceptable to the City. If there are any questions, please give me a call. Once again, my apologies for being tardy in sending you this letter and returning the enclosed receipt for the permit.

Sincerely,

Gordon L. Deane  
President  
Scholl Canyon Landfill Gas Corporation

MESSAGE: Dear Kerry

Attached is the lab report indicating that the oil/grease detected is below to permitted 600 mg/l.

Pursuant to your verbal authorization, SCS-FS is proceeding with the disposal of 40,000 gallons of stored condensate.

We look forward to the resolution of a long term solution w/in the next few wks.

TEST REPORT

Two grab samples from Scholl Canyon Landfill were tested for flash point for the City of Glendale. Sample No. 97-000368 was collected from the sample spigot prior to pre-treatment at Scholl Canyon/SCS Engineers on April 9, 1997 at 1253 hours. Sample No. 97-000369 was collected from the sample spigot prior to pre-treatment at Scholl Canyon/LA County on April 9, 1997 at 1329 hours.

Both samples were collected by Greg Ahern and delivered to the laboratory on April 9, 1997 at 1405 hours by Greg Ahern and Doug Kitchen. Flash point analysis was performed in accordance with ASTM Method D93-90, "Standard Methods for Flash Point by Pensky-Martens Closed Tester".

APPLICATION FOR INDUSTRIAL WASTE PERMIT

Business Name: Scholl Canyon Landfill Gas Limited Partnership

Business Owner: Gordon L Deane, President Phone: (818) 956-8123

Address of Installation: 3001 Scholl Canyon Road 91206

Mailing Address: Same

Type of Industry: Gas Production and Distribution SIC Code: 4922

Character of operation producing waste: \_\_\_\_\_

Landfill Condensate Gas to Energy Project

Types of chemicals, solvents, cleaning compounds, oils and other substances contained in liquid waste discharge: \_\_\_\_\_

Water, oil and trace organics

Approximate gallonage of waste liquids (3,300) per (24) hour day.

Additional information: Temporary permit for a period of 6 months.

Permittee to implement a self-monitoring program (copy attached).

Permittee shall install all required tanks, equipment and controls

prior to start of Permanent Operations in 6 months. Existing 10

gpm air stripper. Drivers License # 298501772-MA

Fee: \$85.00 (Checks made payable to the City of Glendale.)

For further information, if necessary, call 548-3945.

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

AUTHORIZED SIGNATURE REQUIRED

1. Business Owner.
2. Corporate officer or designated employee with written authorization.
3. Managing partner.

**SELF-MONITORING REQUIREMENTS**

The permittee shall monitor sampling point 01 for the following parameters, at the indicated frequency and by the indicated sample type:

| <u>Constituents</u> | <u>Units</u> | <u>Measurement<br/>Frequency</u> | <u>Sample<br/>Type</u> |
|---------------------|--------------|----------------------------------|------------------------|
| Flow                | GPD          | -----                            | Report                 |
| Arsenic             | mg/l         | 1/3mos. [1]                      | Composite              |
| Cadmium             | mg/l         | 1/3mos. [1]                      | Composite              |
| Copper              | mg/l         | 1/3mos. [1]                      | Composite              |
| Chromium(Total)     | mg/l         | 1/3mos. [1]                      | Composite              |
| Cyanide(Free) [5]   | mg/l         | 1/3mos. [1]                      | Grab                   |
| Cyanide(Total)      | mg/l         | 1/3mos. [1]                      | Grab                   |
| Nickel              | mg/l         | 1/3mos. [1]                      | Composite              |
| Lead                | mg/l         | 1/3mos. [1]                      | Composite              |
| Zinc                | mg/l         | 1/3mos. [1]                      | Composite              |
| Silver              | mg/l         | 1/3mos. [1]                      | Composite              |
| pH                  | S.U.         | 1/3mos. [1]                      | Grab                   |
| Dissolved Sulf.     | mg/l         | 1/3mos. [1]                      | Grab                   |
| Oil & Grease        | mg/l         | 1/3mos. [1]                      | Grab                   |
| Chlorides [3]       | mg/l         | 1/3mos. [1]                      | Composite              |
| TTO [4]             | mg/l         | 1/3mos. [1]                      | Grab                   |
| BOD[3]              | mg/l         | 1/3mos. [1]                      | Grab                   |
| COD[3]              | mg/l         | 1/3mos. [1]                      | Composite              |
| Suspended Solids    | mg/l         | 1/3mos. [1]                      | Composite              |

**FOOTNOTES TO MONITORING REQUIREMENTS**

1. The sample shall be taken on a day when these substances are likely to be present in their maximum concentration.
2. Los Angeles County Sanitation District shall store all wastewater for a period of not less than 24 hours to allow SC-LP to collect a 24-hr composite sample and grab samples from its operation unaffected by their waste stream.

3. The City is in the process of establishing a database for these constituents.

4. Total Toxic Organics (TTO) shall be the summation of all quantifiable values greater than 0.01 milligrams per liter for the following toxic organics:

|  |                              |
|--|------------------------------|
| Acenaphthene                                   | 4-bromophenyl phenyl ether   |
| Acrolein                                       | Bis(2-chloroisopropyl) ether |
| Acrylonitrile                                  | Bis(2-chloroethoxy) methane  |
| Benzene  | Methylene Chloride           |
| Benzidine                                      | Methyl Chloride              |
| Carbon tetrachloride<br>(tetrachloromethane)   | Methyl Bromide               |
| Chlorobenzene                                  | Bromoform                    |
| 1,2,4-trichlorobenzene                         | Dichlorobromomethane         |
| Hexachlorobenzene                              | Chlorodibromomethane         |
| 1,2-dichloroethane                             | Hexachlorobutadiene          |
| 1,1,1-trichloroethane                          | Hexachlorocyclopentadiene    |
| Hexachloroethane                               | Isophorone                   |
| 1,1-dichloroethane                             | Naphthalene                  |
| 1,1,2-trichloroethane                          | Nitrobenzene                 |
| 1,1,2,2-tetrachloroethane                      | 2-nitrophenol                |
| Chloroethane                                   | 4-nitrophenol                |
| Bis(2-chloroethyl) ether                       | 2,4-dinitrophenol            |
| 2-chloroethyl vinylether(mixed)                | 4,6-dinitro-o-cresol         |
| 2-chloronaphthalene                            | N-nitrosodimethylamine       |
| 2,4,6-trichlorophenol                          | N-nitrosodiphenylamine       |
| Parachlorometa cresol                          | N-nitrosodi-n-propylamine    |
| Chloroform (trichloromethane)                  | Pentachlorophenol            |
| 2-chlorophenol                                 | Phenol                       |
| 1,2-dichlorobenzene                            | Bis(2-ethylhexyl) phthalate  |
| 1,3-dichlorobenzene                            | Butyl benzyl phthalate       |
| 1,4-dichlorobenzene                            | Di-n-butyl phthalate         |
| 3,3-dichlorobenzidine                          | Di-n-octyl phthalate         |
| 1,1-dichloroethylene                           | Diethyl phthalate            |
| 1,2-trans-dichloroethylene                     | Dimethyl phthalate           |
| 2,4-dichlorophenol                             | 1,2-Benzanthracene           |
| 1,2-dichloropropane                            | Benzo(a)pyrene               |
| 1,3-dichloropropylene                          | 3,4-Benzofluoranthene        |
| 2,4-dimethylphenol                             | 11,12-Benzofluoranthene      |
| 2,4-dinitrotoluene                             | Chrysene                     |
| 2,6-dinitrotoluene                             | Acenaphthylene               |
| 1,2-diphenylhydrazine                          | Anthracene                   |

2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD)

5. Cyanide (Free) shall mean cyanide amenable to chlorination as defined by 40 CFR 136.
  - A. Monitoring and sampling shall be carried out during a period of normal operations.
  - B. All handling and preservation of collected samples and laboratory analyses of samples shall be performed in accordance with 40 CFR 136 and amendments thereto unless specified otherwise in the monitoring conditions of this permit. The collection, handling, storage and analyses of all samples taken for determination of the wastewater characteristics discharged shall be performed by independent laboratories certified by the State of California or approved by the Director of Public Works of the City of Glendale.

#### REPORTING REQUIREMENTS

##### A. Self-Monitoring

The permittee shall implement a self-monitoring program. Monitoring results obtained shall be summarized and reported on a periodic compliance report form and submitted by the 15<sup>th</sup> day of the month following the monitoring period. The reporting schedule is summarized as follows according to the industrial discharge in gallons per day (GPD):

CITY OF

# Glendale CALIFORNIA

**DRAFT**

Cohasset, MA 02025

ATTENTION: Gordon L. Deane, President

SUBJECT: Termination of Discharge and Proper Disposal of  
Flammable Material

Dear Mr. Deane:

On January 5, 1998, two split samples of condensate wastewater from the subject facility were taken and analyzed for ignitability (Flash Point) by two different State certified laboratories. According to the Lab analysis results, one sample exhibited the characteristic of ignitability (Flash Point < 140°F) and the other did not. It is our intention at this point to base our decision by relying on the conservative result in order to protect and prevent any potential harm to the environment.

The Glendale Municipal Code (GMC), Article V, Section 13.40.310 prohibits the discharge of flammable materials to the sanitary sewer. Additionally, a material with a Flash Point below 140°F is also classified as being hazardous waste in accordance with California Code of Regulations (CCR) Title 22, Section 66261.21.

You are required to terminate the discharge of wastewater that meets the above criteria to the sanitary sewer, including the collected condensate wastewater in 10,000 gallons storage tanks.

In March and April of 1997, samples of condensate prior to its treatment also exhibited the characteristic of ignitability. In accordance with CCR, Title 22 any process treating waste with this characteristic must be performed under a Tiered Permit issued by this office.

PRINTED ON RECYCLED PAPER

**SCS ENGINEERS**January 29, 1998  
File No. 0196115.04Mr. David D. Starr  
Fire Marshall  
City of Glendale Fire Department  
Hazardous Materials Section  
780 Flower Street  
Glendale, California 91201**SUBJECT: TERMINATION OF DISCHARGE ORDER, SCHOLL CANYON LANDFILL  
GAS LIMITED PARTNERSHIP, 3001 SCHOLL CANYON ROAD,  
GLENDALE, CALIFORNIA**

Dear Mr. Starr:

The Scholl Canyon Landfill Gas Limited Partnership (SC-LP) was recently issued a Termination of Discharge Order (TDO, dated January 14, 1998) for violation of its effluent limitations for ignitability (Flash Point), which occurred during discharge batch sampling on January 5, 1998. In addition, according to the January 14, 1998 letter, samples collected in March and April 1997, by the City of Glendale Fire Department (GFD) of condensate prior to its treatment also exhibited the characteristic of ignitability. In accordance with CCR Title 22, the onsite treatment of waste with this characteristic must be performed under a Tiered Permit issued by the GFD.

In accordance with the January 14, 1998 letter, SCS Engineers (SCS) has prepared the proper Tiered Permitting forms and this response to the TDO on behalf of the SC-LP.

**CONDENSATE SAMPLING**

In October 1997, SCS Engineers was retained by Bernstein, Cushner, and Kimmell, legal counsel for SC-LP, to collect and analyze several samples of landfill gas (LFG) condensate contained in various vessels at the Scholl Canyon LFG compression station. Although the results of this sampling are privileged and confidential, and constitute attorney-client work product, the results of the sampling are being provided to the GFD as requested, with the understanding that the provision of this data is not intended to be and shall not be construed as a waiver of any applicable privilege. A summary of the analytical results is shown on Table 1, Attachment A. Copies of the laboratory reports and chain-of-custody documentation are also enclosed.

As shown in Table 1, the flash point for the vessels analyzed ranged from 85 to 130 degrees Fahrenheit, with pH ranging from 3.06 to 7.57. Based on these results, the condensate in all of the vessels analyzed failed the flash point test for ignitability (flash point < 140° Fahrenheit), and is, therefore, an ignitable hazardous waste in accordance with CCR Title 22 and Federal Resource Conservation and Recovery Act (RCRA) regulations.

Mr. David D. Starr  
January 29, 1998  
Page Two

2  
3. Of special note is the fact that the condensate failed the flash point test in the inlet separator (i.e., prior to passing through the SC-LP compressors); therefore, the condensate is hazardous prior to it being received by SC-LP.

4. As such, the new condensate treatment system currently being installed at the Scholl Canyon LFG compression station must be regulated as a fixed treatment unit (FTU) and requires a permit under the State of California's tiered permitting program, which is administered by the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC), through the GFD.

cc:  
**TIERED PERMITTING**

The tiered permitting program was created and enacted through the Wright-Polanco-Lempert Hazardous Waste Treatment Permit Reform Act of 1992 (AB 1772), which was codified into the CCR, Title 22, Section 66270.10, et. seq. AB 1772 established five tiers of authorization for the treatment of hazardous waste. Under this permitting structure, the lower three tiers apply to the on-site treatment of hazardous waste, which was also generated on-site. The remaining two tiers deal with off-site treatment of hazardous waste or higher risk on-site treatment.

In order to determine the appropriate tier for the on-site treatment of the hazardous waste generated at the Scholl Canyon LFG compression station, SCS referenced the "1996 Onsite Tiered Permitting Flowchart," published by DTSC, February 15, 1996 (DTSC Flowchart, 1996). Using this flowchart as a guide, the permitting tier which governs on-site hazardous waste treatment at the Scholl Canyon LFG compression stations was identified. This process included the identification of the affected wastestream and treatment technology. Once the permitting tier had been preliminarily determined, the summary criteria for the identified tier was evaluated. This process is detailed in the following sections.

**Identification of Wastestream**

The hazardous wastestream within the Scholl Canyon LFG compression station is the oil-water mixture that forms as a result of the compression of the LFG which is sent to the compression station from the Scholl Canyon Landfill. This oil-water mixture was what was tested by both SCS and GFD, with resulting flash point test failure.

**Identification of Treatment Technology**

The new condensate treatment system being built at the Scholl Canyon LFG compression station consists of the in-line phase separation of the oil and water in the condensate via gravity settling and the use of flocculants and demulsifiers.

DATE 29 January, 1998

Steve Zurn, Senior Executive Assistant, Public Works

David Starr, Fire Marshal

Mr. David D. Starr

Page Three

Preliminary Identification of Permitting Tier

Following the 1996 flowchart guide, for oil mixed with water treated using phase separation, the identified permitting tier is Conditional Exemption for Specified Wastestreams (CESW) (Chart 10b, page 8, DTSC Flowchart, 1996).

Evaluation of CESW Summary Criteria

According to Appendix I of the 1996 DTSC Flowchart, in order to operate under conditional exemption for a specified wastestream, the treatment operation in question must meet the following criteria:

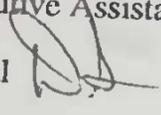

- Treatment is exempt from a RCRA permit requirement.
- Wastes are generated on the site where they are being treated.
- The wastestream is eligible for conditional exemption as a specified wastestream according to DTSC.
- The treatment process is specified for the specific wastestream being treated.
- The waste is not treated in :
  - Landfills.
  - Surface Impoundments
  - Injection Wells
  - Waste Piles
  - Land Treatment Units
  - Thermal Destruction Units

**RCRA Exemption -**

There are two reasons that the oil-water mixture generated from the LFG compression process is exempt from a RCRA permit requirement. First, the wastestream that is produced in the LFG compression station is generated in a manufacturing process unit, thereby it is exempted from RCRA classification according to 40 CFR 261.4(c) and CCR Title 22 CCR 66261.4(c).

*(c) hazardous wastes which are exempted from certain regulations.  
A hazardous waste which is generated in a product or raw material storage tank, a product or raw material transport vehicle or vessel, a product or raw material pipeline, on in a manufacturing process unit or and associated non-waste-treatment-manufacturing unit, is not subject to regulation under this division or to the notification requirements of Health and Safety Code section 25153.6 until it exits the unit in which it was generated, unless the unit is a surface impoundment, or unless the hazardous waste remains in the unit more than 90 days after the unit ceases to be operated for manufacturing, or for storage or transportation product or raw materials;*

Title 22, CCR, Section 66261.4

Mr. David D. Starr  
January 29, 1998  
Page Four

This regulation is intended to exempt from regulation wastes that are generated within a manufacturing process - at least until they are removed from that process. This regulation is taken verbatim from a federal regulation codified at 40 CFR 261.4(c). The authors of the federal regulation explained its purpose in a document published in the Federal Register, as 45 Federal Register 72024 (October 30, 1980). To avoid having the RCRA regulations reach so far back into the manufacturing process, the EPA carved out this exemption for wastes that are generated within a manufacturing unit. The rationale for this exemption is that manufacturing units are "designed and operated to hold valuable products or raw materials in storage or transportation or during manufacturing," and are therefore, "capable of holding, and are typically operated to hold, the hazardous wastes which are generated in them until the wastes are purposefully removed." As examples of such operations for which this exemption applies, the EPA identified "distillation columns, flotation units, and discharge trays or screens" as well as "non-waste treatment process units such as cooling towers."

Like examples cited by the EPA, the compressor stations are designed to hold a valuable product during manufacturing (i.e. landfill gas) and are capable of holding waste during the process (i.e. the condensate). In addition, the compressor stations are functionally analogous to the examples cited by the EPA, particularly the distillation columns and cooling towers. Thus, this exemption applies to the compressor stations.

However, even after this material exits from the manufacturing process, it is still exempt from RCRA. This is because the waste generated on-site is treated in wastewater treatment units and is discharged to a publicly owned treatment works (POTW). The definition of a wastewater treatment unit is presented in 40 CFR 260.10 and this exclusion is referenced in 40 CFR 264.1(g)(6) and 40 CFR 270.2.

**Wastes Generated On-Site -**

As mentioned above, the hazardous waste generated at the Scholl Canyon LFG compression facility is an oil-water mixture formed as a result of the compression of the LFG which is sent through compressors at the LFG compression station. Once the condensate generated in the compressor station exits the compressors, it is piped directly into the on-site treatment facility. Therefore, the waste is treated on-site.

**Wastestream Eligibility -**

A wastestream is eligible for conditional exemption if it meets the criteria set forth in the California Health and Safety Code (CHSC), Section 25201.5(c). For the oil-water mixture generated by the compressor station, CHSC Section 25201.5(c)(7) applies:

TO  
FROM  
Per  
wer  
fol

P  
h  
1.  
2.  
3.  
4.  
5.  
6.

*(c) Notwithstanding any other provision of law, a hazardous waste facilities permit or other grant of authorization is not required to conduct the following treatment activities, if the generator treats the following hazardous waste streams using the treatment technology required by this subdivision:*

CHSC, Section 25201.5(c)

*(7) Except as provided for specific waste streams in Section 25200.3, the generator conducts the separation by gravity of the following, if the activity is conducted in impervious tanks or containers constructed of non-corrosive materials, the activity does not involve the addition of heat or other form of treatment, or the addition of chemicals other than flocculants and demulsifiers, and the activity is managed in compliance with applicable requirements of federal, state, or local agency or treatment works:*

- (a) The settling of solids from waste where the resulting aqueous waste stream is non-hazardous.*
- (b) The separation of oil/water mixtures and separation sludges, if the average oil recovered per month is less than 25 barrels.*

CHSC, Section 25201.5(c)(7)

Once the new treatment system is operational, SC-LP fully expects that that the aqueous waste stream produced from the oil/water separation will be non-hazardous, and that the average oil recovered from the oil/water separation process is less than 25 barrels (1,050 gallons) per month. SC-LP will implement a monitoring and sampling program to confirm this. In addition, the treatment process will be conducted in impervious tanks or containers, and does not involve the addition of heat or other forms of treatment other than flocculants and/or demulsifiers.

#### **Specified Treatment Process –**

The treatment process SC-LP has designed for an oil-water mixture is the phase separation of the oil-water mixture using an oil-water separator. This constitutes a specified treatment process that is specific to the wastestream being treated.

#### **Treatment Limitations –**

The hazardous waste subject to the CESW will not be treated in any of the facilities or devices referenced above. The aqueous waste stream produced from the oil-water separation will be discharged under an industrial wastewater discharge permit (W-3142), and the waste oil produced from the separation will be sent to an authorized recycling facility.

Mr. David D. Star

**Notification Submittal**

Enclosed as Attachment B, please find a copy of the On-Site Hazardous Waste Treatment Notification form (DTSC form 1772) as well as the Conditionally Exempt - Specified Wastestreams, Unit Specific Notification form (DTSC form 1772B), along with all appropriate attachments with the exception of the facility map and plot plan. This plan has already been submitted to the OFD.

For purposes of DTSC form 1772, Treatment Unit 1 consists of the oil-water separation components of the new condensate treatment system. These components include the Dissolved Air Flotation unit, Oil-Water Separator, Pump-Out, Recycle, Waste Oil, and Sludge Tanks.

Please address any questions or comments related to this submittal to our office.

Sincerely,

Ray Huff, R.E.A.

Subject: Scholl Canyon LFG

Per your request here is a list of concerns regarding the new treatment facility for your meeting that is scheduled for today with the third party consultant. Note that this list may not be all inclusive.

**SCHOLL CANYON LANDFILL GAS TO ENERGY LIMITED PARTNERSHIP  
AREAS OF CONCERN FOR NEW WASTEWATER TREATMENT PLANT**

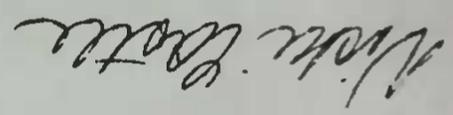

1. Health Effects, (Headaches, skin irritation, corrosive characteristics-burning of skin).
2. Toxicity, (Identification of all constituents that make up this wastestream).
3. Flash Point (Through out the system).
4. Odor Control, (Eliminate all odors downstream of treatment plant).
5. pH, (Continuous monitoring of pH with automatic discharge shutoff and alarm).
6. Oil Removal, (How will waste from oil removal be handled?).
7. Dissolved Sulfides, (Chlorination for this constituent may result in the formation of chloroform. How will this be dealt with ?).
8. Total Toxic Organics, (See Dissolved Sulfides).
9. Sludge Storage and Possible Filter Press Addition, (How will Sludge be stored and disposed of?). *HAZ WASTE?*
10. Separation and Containment of Incompatible Materials, (How will incompatibles be stored ?).
11. Vents from all Tanks, Containers, Drums and Pressurized Treatment Units, (May off gas Flammable Vapors. How will this be dealt with ?).
12. Spill Prevention Control and Countermeasures Plan, (Shall be Site Specific!).
13. Maintenance and Operational Manuals and Logs, (Copies of manuals to be provided to this office and manuals and logs to be maintained on site.).

**SCHEDULE**

EMCON staff will review available plans and laboratory results prior to our site visit. It is proposed that the site visit be performed within the first two weeks of May. A detailed proposal will be submitted and a meeting between involved parties will be held within the last two weeks of May. Meanwhile, depending on the availability of revised plans referred to in Item #2, a review of the system will be performed.

Please call me if you have any questions. EMCON Senior Engineer, Stan Strong, will be available to work on this project beginning May 4th. I will make arrangements early next week with EMCON personnel, the Fire Department and Jake Amar to visit Scholl Canyon Landfill.

Sincerely,

Vicki Castle  
Area Manager

Subject: Untreated Waste Condensate Spill/Unauthorized Release  
3001 Scholl Canyon Road

Gentlemen:

On Oct. 21, 1998, at approximately 2:30 p.m. an incident occurred at the waste condensate storage tanks during a transfer of untreated waste condensate (condensate) from the storage tanks to an Asbury Environmental vacuum truck, resulting in the release of approximately 5,000 gallons of condensate. Although, this area is provided with an earthen berm equipped with a plastic liner as secondary containment, an uncontrolled release of condensate did occur by means of a large crack in the earthen berm. It is important to note that there were no SCS Field Services personnel supervising this transferring operation or on site at the time of the incident. Consequently, it was necessary for the operator of the vacuum truck to notify Los Angeles County Sanitation District (LACSD) staff onsite with regards to this incident. LACSD personnel in turn notified Glendale Public Works Engineering about the incident.

This office received a call from Jake Amar at 3:10 pm requesting that Inspector Ahern respond to Scholl Canyon Landfill as a result of this incident. Captain Indermill and Inspector Ahern arrived at the spill location at about 3:35 p.m. and met with Jake Amar, Glendale Public Works and Matt Zuro, Marty Zimlock both of LACSD. LACSD personnel had filled in the crack in the earthen berm to prevent any further release of condensate outside of the secondary containment. At this time there was about 1'-2' of free condensate inside of the secondary containment area, with condensate continuing to drain from one of the 10,000 gallon storage tanks through broken piping. Prior to the arrival of Captain Indermill and Inspector Ahern LACSD personnel closed the valves to isolate the leaking tank.

PRINTED ON RECYCLED PAPER

Brad Everett of SCS joined the above meeting at about 4:00 p.m. . At this meeting it was agreed that all free liquid would be removed, a deodorized would be put down and a plastic cover put over the spill area to minimize the odor problem for the night. Additionally, that additional cleanup would be done starting early the next morning. i.e. removal of storage tanks (unstable), cleanup of soil . . . etc.

Meeting Oct. 22, 1998, at approximately 3:30 p.m. Scholl Canyon Landfill, SCS Trailer. Greg Ahern and Vasken Demirjian, Glendale Fire, Jake Amar, Public Works Engineering and Ken Ayster of SCS Field Services. At this meeting it was clarified that as a CUPA the Fire Dept. was the responsible regulatory agency for this incident. It was further understood that your contractor, SCS Field Services was to submit a work plan to this office to determine the lateral and vertical extent of contamination that occurred as result of this unauthorized release. Additionally, that a detail letter of explanation as to the cause of the incident must be submitted to this office. It is recommended that all cleanup work be completed prior to the start of the rainy season in order to prevent further migration of contamination.

As of this date no work plan or letter of explanation has been received by this office. It is necessary that a work plan and letter of explanation be submitted to this office by November 30, 1998.

Very truly yours,  
  
Gregory P. Ahern, Sr.  
Inspector

SUBJECT Scholl Canyon Landfill Gas

As you know the Landfill Gas Recovery plant located at Scholl Canyon has been revamping since early in 1997. The changes at the plant are required to meet Industrial Waste and Hazardous Waste standards for the liquid produced as a byproduct of the gas recovery process. The condensate is produced as the landfill gas is compressed prior to resale back to Glendale Public Service. The Fire Department has been involved in the Industrial and Hazardous Waste areas as well addressing fire and life safety concerns at the facility. The Public Works Division has been very involved because they are part owners of the plant and have additional financial responsibilities associated with the cost of "treating" the landfill gas before and after it is collected. The plant is currently operating under a temporary permit, issued by the Fire Department, pending acceptance of a third party review of the plant.

The plant has been evolving since its start up as the operators have tried several configurations and technologies to meet Federal, State and Local discharge standards for the waste that is dumped to sewers. It has been common for the construction at this site to start before Industrial Waste plan check was completed. That was the case with the most recent improvements. In December of 1998 the plant operators (and our inspectors) collected several samples of the effluent that exceeded the standard for flammability. We also learned from the operators that there had been a flash fire at the facility during 1998. The exact time and circumstances are not known. We decided to let the gas recovery plant operate as is, but the effluent must not be dumped to the sewer until the nature of the effluent and the adequacy and safety of the treatment plant were evaluated by a qualified third party. Public Works was to hire a consultant with appropriate expertise that was acceptable to all parties ( Public Works, Gas plant operator, LA Co Sanitation and Fire). OWT-EMCON was selected and in May they provided us with a report. The report addresses the issues we identified but we do not feel it addresses all of them adequately.

The report states that the products being treated and produced by the Gas Recovery plant are variable because of the many factors that affect landfill gas production. EMCON feels that the plant as designed will adequately treat the condensate to meet all applicable standards for discharge to the sewer. They also feel that the condensate should not be considered as a flammable liquid because it consists mostly of water with minor amounts of contaminants.

However some of those contaminants do produce flammable vapors and it is possible for these vapors to collect in the tanks and reach flammable concentrations. Therefore, EMCON recommends that the plant not be designed for handling flammable liquids, and no ignition sources be introduced into the tanks in question.

In our response to the report we required the following:

1. Since procedural, rather than engineering controls are going to be the key to safe operation we would like EMCON to review the Operations and Safety Plans for the facility.
  - a. Operations and Safety Plans shall include but not be limited to the following:
    - i. Designate individuals responsible for safety, such as Safety director, safety team members, etc.
    - ii. Requirements for regular internal safety audits, with documentation kept on the site.
    - iii. Training for all employees upon hire, and regular periodic follow-up training for all employees.
    - iv. Provisions for training records to be established and maintained on file.
    - v. A regular maintenance and calibration schedule shall be established based upon the manufacturers' specifications and recommendations for the pretreatment equipment, ORP and pH probes and combustible gas monitoring equipment.
    - vi. Contingency plans to address all potential events at the plant with SOPs to address each event, including routine maintenance procedures, confined space entry procedures, Preventive Maintenance procedures, SOPs for actions to take when any of the various required tests come back with positive abnormal results (including the carbon canister 1000 ppm screening tests, discharge tests, LEL- discharge monitoring, etc.)
  - b. EMCON shall verify that the items identified on the General Safety Assessment report dated October 23, 1998 have been corrected.
2. Provide revised piping plans to indicate that the Air Stripper is bypassed and only used as a polishing unit when necessary.
3. As discussed in EMCON's Recommendation 2, page 5, if the carbon canisters are subjected to flows with greater than 1000 ppm of Volatile Organic Compounds (VOCs) there is a possibility of spontaneous combustion in the canisters. The air flow into the carbon canisters shall be tested during the initial phase of system start up to determine the concentration of VOC's entering the canisters. If concentrations above 1,000 ppm are found, that portion of the system will be evaluated by a third party with appropriate expertise, preferably, Dr. Jim Graham, per EMCON's recommendations.

After the August meeting was scheduled, I met with Steve Zarn and Jake Amar of Public Works regarding another matter. They explained that EMCON estimates it will take several weeks to several months and more than \$10,000 to perform the kind of safety review we requested. I asked them to investigate alternatives that would meet our intent and be less costly. I have had no further discussions with them, EMCON or the plant operators.

Vicky Castle  
EMCON/OWT  
15255 Alton Parkway, Suite 100  
Irvine, California 92718  
FAX (714) 450-0524

Dear Vicky:

This letter is a summary of the key points covered in the phone conference held last week with you, Stan Strong, Jeff Halpert, Greg Ahern and myself to review the engineering report dated May 27, 1999.

The report recommends that land fill gas (LFG) condensate should not be classified as a flammable or combustible liquid although there is a potential for ignitable vapor-air mixtures in spaces above the liquid surface in storage or process tanks. We understand EMCON's position to be that the system design does not need to address the hazards associated with Flammable or Combustible liquids because the condensate will not be able to sustain combustion. However, as Stan stated, the contents of the vapor spaces in the pretreatment system should always be treated as if they could be flammable. This is the reason you feel the equivalency clause (NFPA30, section 1-4.2) is applicable. Our acceptance of the equivalency shall be based on the following items.

1. We understand that, in EMCON's opinion, the system does not present the possibility of a flash fire or explosion during normal operation. However, a flash fire or explosion could occur during improper maintenance of the system components, for example, introducing an ignition source while opening one of the tanks.
2. Since procedural, rather than engineering controls are going to be the key to safe operation we would like EMCON to review the Operations and Safety Plans for the facility.
  - a. Operations and Safety Plans shall include but not be limited to the following:
    - i. Designate individuals responsible for safety, such as Safety director, safety team members, etc.
    - ii. Requirements for regular internal safety audits, with documentation kept on the site.

  - iv. Provisions for training records to be established and maintained on file.
  - v. A regular maintenance and calibration schedule shall be established based upon the manufacturers' specifications and recommendations for the pretreatment equipment, ORP and pH probes and combustible gas monitoring equipment.
  - vi. Contingency plans to address all potential events at the plant with SOPs to address each event, including routine maintenance procedures, confined space entry procedures, Preventive Maintenance procedures, SOPs for actions to take when any of the various required tests come back with positive abnormal results (including the carbon canister 1000 ppm screening tests, discharge tests, LEL- discharge monitoring, etc.)
- b. EMCON shall verify that the items identified on the General Safety Assessment report dated October 23, 1998 have been corrected.
3. Provide revised piping plans to indicate that the Air Stripper is bypassed and only used as a polishing unit when necessary.
4. As discussed in EMCON's Recommendation 2, page 5, if the carbon canisters are subjected to flows with greater than 1000 ppm of Volatile Organic Compounds (VOCs) there is a possibility of spontaneous combustion in the canisters. The air flow into the carbon canisters shall be tested during the initial phase of system start up to determine the concentration of VOC's entering the canisters. If concentrations above 1,000 ppm are found, that portion of the system will be evaluated by a third party with appropriate expertise, preferably, Dr. Jim Graham, per EMCON's recommendations.

It is EMCON's opinion that the plant will, if properly run, "sufficiently treat the raw condensate to such a degree as to render it acceptable under the requirements of the discharge permit." The specific requirements of the Industrial Waste Permit have been presented to, discussed with, SCS, and most of them were provided to EMCON by SCS on May 27, 1998. They are outside of the scope of the review by EMCON, but they must be met prior to granting the permit. See Attachment 1.

 Re: Engineering Review of Condensate Pretreatment System, Scholl Canyon Landfill  
 Gas Processing Facility, Glendale, California

Dear Mr. Indermill:

On behalf of City of Glendale, Public Works Department, this letter report is presented in response to the request by the City of Glendale Fire Department (GFD) for a third party technical review of the proposed condensate pretreatment system at the Scholl Canyon Landfill. In a plan review dated January 7, 1998, the GFD Fire Prevention Bureau, Permit Services Center delineated some concerns regarding the proposed pretreatment system. This report is intended to provide a review of the proposed design and to address those concerns.

## ENGINEERING REVIEW COMMENTS

### Origin and Nature of Landfill Gas Condensate

Landfill gas (LFG) condensate is an unwanted but necessary by-product of any LFG collection system. Condensate is collected through traps at low points in the LFG piping, in knockouts upstream of equipment, such as blowers and compressors. Additional condensate is formed and collected downstream of any compression process, which is the case at Scholl Canyon. LFG condensate typically consists of water with a small amount of hydrocarbons and organics such as acetone and methyl ethyl ketone. The condensate at Scholl Canyon also contains a small amount of compressor lubricating oil due to compressor leakage or blowby. LFG condensate typically exhibits a low pH, and has a foul odor. In the past, raw, untreated LFG condensate was typically disposed by reinjection back into the landfill. In recent years, however, regulations have evolved which no longer allow this practice.

Mr. Eric Indermill  
April 1, 1999  
Page 2

## Specific Items in Reference 1 (GFD Plan Review Letter)

### Item #1

Flash point of the condensate is one of the primary issues associated with the proposed pretreatment system. There are two areas of concern regarding flash point: (1) the design and construction of the condensate pretreatment system must comply with NFPA 30 (2) the discharge permit requires that the flash point of the discharged condensate must not be less than 140<sup>0</sup> F.

NFPA 30 defines various classes of flammable and combustible liquids as follows: A flammable liquid has a closed cup flash point less than 100<sup>0</sup> F with a vapor pressure not more than 40 psia at 100<sup>0</sup> F. A flammable liquid is a Class I liquid. A combustible liquid has a closed cup flash point equal to or greater than 100<sup>0</sup> F. and may be Class II (flash point equal to or greater than 100<sup>0</sup> and less than 140<sup>0</sup>), Class IIIA (flash point equal to or greater than 140<sup>0</sup> and less than 200<sup>0</sup>), or Class IIIB (flash point equal to or greater than 200<sup>0</sup> F).

For the most part, closed cup flash point tests of the Scholl Canyon LFG condensate have resulted in flash points above 200<sup>0</sup> F. There have been occasions in the past, however, and may be again in the future, when test results have exhibited lower flash points, some as low as < 100<sup>0</sup> F. Such test results would therefore, by definition, classify the condensate as a combustible or even flammable liquid, depending on the actual flash point. It is EMCON's recommendation, however, that GFD use its authority as allowed in NFPA 30 1-4.2 to consider the condensate as non-flammable and non-combustible for the following reason: It is the small fractions of dissolved hydrocarbons that cause LFG condensate to sometimes exhibit a low closed cup flash point. The liquid itself will not sustain burning. Such liquids are addressed in NFPA 30 A-1-7.2. This section of the code also names a test for identifying such a liquid, ASTM D 4206 *Standard Test Method for Sustained Burning of Liquid Mixtures Using the Small Scale Open-Cup Apparatus*.

Although it is recommended that the LFG condensate not be classified as a flammable or combustible liquid, consideration must be given to potential ignitable vapor-air mixtures that may occur in a confined space (such as the volume above the liquid surface in a storage or process tank).

EMCON reviewed the condensate pretreatment system design information in the context of NFPA 30. Three main areas were addressed: tanks, piping, and electrical equipment.

**Tanks.** Tanks T1, T2, and T3 in the pretreatment system are each 4,000-gallon capacity of HDPE material (Reference 11, Drawing M-1). These tanks have the potential to contain untreated condensate, which may be of a corrosive nature. HDPE is the preferable

Mr. Eric Indermill  
April 1, 1999  
Page 3

Project 0126-029.001

engineering choice of material for these tanks. The remaining process tanks appear to be constructed of appropriate materials.

**Piping, Valves, and Fittings.** PVC is an acceptable engineering choice of materials for piping, valves, and fittings containing LFG condensate.

**Electrical Equipment.** None of the electrical equipment or components in the pretreatment system are rated for use in classified areas. Upon review of references 7 and 9 and understanding the nature of LFG condensate, it is concluded that classifying the treatment system as a hazardous area is not warranted. Therefore, the existing electrical components are acceptable for use in the system. Note, however, that the potential exists for an ignitable vapor-air mixture to be present in the tank volume above the liquid level. This potential has the highest probability in Tanks T1, T2, T3, and the oil/water separator. Electrical components must never be placed within a tank head space unless such components are rated for use in classified areas.

#### Item #2.a Flammability Throughout the Process

As discussed above, the LFG condensate should not be classified as a flammable or combustible liquid. A review of the Material Safety Data Sheets for process chemicals attached to Reference 2 reveals no flammable liquids. Therefore handling, processing, treatment, etc. of flammable liquids is not an issue at this time.

#### Item #2.b. Sulfides Pretreatment

A chlorine injection system is incorporated into the system design for the pretreatment of dissolved sulfides as described in Reference 2, page 2. This is a recognized and accepted process for the removal of dissolved sulfides. Although sufficient operating data was not available for the reviewer to verify the effectiveness of the system for the removal of dissolved sulfides during the initial checkout period, it is anticipated that test results of final effluent will show levels of dissolved sulfides well below that which is allowed by the discharge permit.

#### Item #2.c. Oil and Grease Extraction, Processing, and Disposal

The system incorporates an oil-water separator to remove floatable oil and grease from the condensate, and a dissolved air floatation (DAF) unit to remove treated oil and grease. These system components are described in Reference 2, page 2. As documented in References 3 and 4, startup trials of the system have demonstrated that initially high concentrations of oil and grease are effectively reduced to levels well below the discharge requirements.

In regard to disposal, Drawing M6 (Reference 5) indicates that oil and grease from the oil-water separator is collected in T-22, which is labeled "Recycled Oil Tank." This implies that collected oil will be recycled. Sludge from the DAF unit is collected in Tank T-21. Drawing M4 indicates that the contents of Tanks T-21 and T-22 are to be hauled off site.

#### **Item #2.d. Odor Elimination**

A review of Reference 5 project drawings reveals that the process tanks and vessels are currently vented to atmosphere through a carbon canister. This is an effective means of odor control. (Please refer to the safety concern in item 2, Conclusions and Recommendations, shown below.) The design drawings also indicate that a deodorizer is injected into the final effluent tank prior to final discharge of the treated condensate.

#### **Item #2.e. Secondary Containment**

Multiple tanks in a common containment require that the containment volume be the larger of 150% of the largest tank or 10% of the total tank volumes. In addition, additional containment height must be provided to accommodate rainfall from a 24-hour 25-year storm. For this system, 150% of the largest tank volume is the governing factor. Therefore the containment volume must be 150% of 4,000 gallons, or 6,000 gallons plus the rainfall allowance. Drawing M-1, Ref. 11, gives the plan dimensions (31'-0" x 34'-5") and curb height (24") of the concrete containment. This volume is much more than the required containment volume.

#### **Item #2.f. Placarding and Signage**

See General Safety Assessment report dated October 23, 1998, attached.

### **Project Drawings**

Initially, EMCON reviewed the project drawings listed in Ref. 6. Comments pertaining to those drawings have been deleted from this report, as the Record Drawings listed in Ref. 11 have replaced the original design drawings

## **CONCLUSION AND RECOMMENDATIONS**

It is EMCON's conclusion that the Scholl Canyon LFG condensate treatment system, properly operated, will sufficiently treat the raw condensate to such degree as to render it

acceptable under the requirements of the discharge permit. However, in the interest of safety and regulatory compliance, the following actions are recommended:

1. Take samples of the incoming raw condensate on a monthly basis and have those samples tested for closed cup flash point. If and when any flash point test results are below 200<sup>0</sup> F, then that same or duplicate sample should be tested in accordance with ASTM D 4206 *Standard Test Method for Sustained Burning of Liquid Mixtures Using the Small Scale Open-Cup Apparatus*. Once this test has been performed on low-flash-point condensate to verify that the liquid will not sustain burning, then no further testing of the incoming condensate should be required.
2. There is a concern regarding the possibility of spontaneous combustion in the odor control carbon canister. In the worst case scenario, if an ignitable vapor-air mixture existed in the head space of one or more tanks, combustion in the carbon bed could backflash to the tank(s). It is recommended that a determination be made of the probability of carbon combustion in this application. In order to do so, an analysis should be made of the vapors from the tank vents going to the carbon canister. In general, a concentration of volatile organic compounds (VOCs) at or above 1,000 parts per million would be a cause for concern. Once the vapor analysis results are obtained, if assistance is required in the evaluation of this risk it is suggested that a competent authority be consulted (e.g. Dr. Jim Graham, U.S. Filter/Westates, LA office, 800-659-1771).
3. Provide documentation to verify proper placarding and signage is in place within and around the treatment system. In addition to signage required for health and safety, this should include labeling of all tanks, and contents and flow direction of piping.

Although not required for compliance with NFPA 30 or other codes, the following additional items are recommended:

- Paint PVC piping and components for ultra violet (UV) protection.

## REFERENCES

EMCON had available the following reference documents to aid in this review:

1. Plan Review for Industrial Waste Treatment System, Plan Check No. 10339, dated January 7, 1998 by GFD Fire Prevention Bureau, Permit Services Center.
2. "Responses to Action Items . . ." letter dated May 27, 1998, from SCS Engineers (SCS) to EMCON/OWT, with attachments. (GFD was copied for this letter.)

Gentlemen:

**Scholl Canyon Landfill (SCLF)**  
**Hazardous Materials Inventory, Hazardous Material Business Plan**

Enclosed please find the annual Hazardous Materials Inventory and the Hazardous Material Business Plan update for SCLF as required by Health and Safety Code §25505.

If you have any questions, please contact the undersigned at extension 2488 at the above listed telephone number.

Very truly yours,

Charles W. Carry

### III-EMERGENCY NOTIFICATION

OUTLINE THE STEPS YOUR BUSINESS SHALL TAKE TO MEET THE NOTIFICATION REQUIREMENTS IN THIS SECTION:

Please use additional sheets of paper as necessary.

A. PROCEDURES FOR NOTIFICATION OF AND COORDINATION WITH EMERGENCY AGENCIES:

In case of emergency, the Site Supervisor will act as the emergency coordinator. It will be his responsibility to collect essential information and notify the local Fire Department (or other appropriate agency). The Assistant Site Supervisor, Site Engineer, Supervising Gas Technician, and the site's Hazardous Waste Inspector will assist the Site Supervisor in these duties.

B. PROCEDURES FOR NOTIFICATION AND EVACUATION OF YOUR EMPLOYEES. (List also the type of alarm signals that will be used).

Several District site vehicles are equipped with radio dispatches for message relays. The Site Supervisor's truck is also equipped with an outside intercom, which would be used to notify customers if necessary. However, due to the quantities and type of chemicals, hazards, etc., stored at the site, an evacuation of the facility is not anticipated. Two evacuation routes exist at the site. If the situation calls for, the main office would be used as an emergency meeting locale. Please see the attached map for these locations.

C. PROCEDURES FOR NOTIFICATION AND EVACUATION?

Customers on site would be notified as stated in Part B. Due to the approximate 2 (two) mile radius from all others living and working around the active landfill site, in addition to the quantities and types of chemicals stored at the site, evacuation/notification of the public would not be warranted.

D. THE PUBLIC LIVING OR WORKING AROUND YOUR FACILITY.

This question is answered in Part C above.

E. DESCRIBE AND LIST YOUR EMERGENCY MEDICAL PLAN. (List names, address and phone number of doctors, medical facilities and/or hospitals that you will utilize during an emergency)

Local Doctor Verdugo Hill Urgent Care Medical Center (818) 241-4331  
544 N. Glendale Ave., Glendale, CA 91204

Local Hospital Glendale Adventist (818) 409-8000  
1509 Wilson Terrace, Glendale, CA 91204

PART IV: CONTAINMENT AND CLEANUP

- A. LIST EMERGENCY MITIGATION AND CONTAINMENT STEPS THAT YOU WILL TAKE IN RESPONSE TO A THREATENED RELEASE OF A HAZARDOUS MATERIAL.

Personnel will immediately isolate the spill area, turn off the appropriate utilities, and notify the local Fire Department or other mandated agency. On site fire extinguishers, absorbent material (Petrolok), landfill equipment (e.g., water trucks, D-9s, scrapers) and/or construction of an earth containment berm will be used as required to facilitate the cleanup and mitigation process. No one will be allowed into the spill area without proper protective equipment (e.g., gloves, boots, respirators, etc.). In case of a minor spill, which can safely be stopped by Plant Operation Personnel and does not involve off-site releases, the lead operator on duty will mitigate the hazard in accordance with established procedures.

- B. LIST CLEAN-UP ACTIVITIES THAT YOU WILL CONDUCT IN THE AFTERMATH OF A RELEASE.

A liquid in a bermed area will be pumped into an appropriate holding tank. An absorbed liquid will be cleaned up with the above stated site supplies, transferred to an appropriate holding drum and then to our hazardous waste storage yard. A private licensed hazardous waste hauler will be contacted to properly dispose of the material.

- C. LIST ALL OTHER RESOURCES THAT WILL BE ACTIVATED DURING A HAZARDOUS MATERIALS RELEASE. (List name, address and phone numbers of your Hazardous Waste Hauler/Contractor and your Insurance Co.).

Contracted emergency response crews would be called if the situation demanded it. Attached is the name, address, and phone number of our hazardous waste haulers. The Districts are self insured.

Please note that the Districts have a full time hazardous waste inspector at the site. This inspector is trained to identify and handle hazardous waste, and/or use the appropriate resources as required.

PART V: SITE EMERGENCY  
LIST BELOW AND EXPLAIN SPECIAL HAZARDOUS MATERIALS FACILITY RELATED TO HAZARDOUS MATERIALS (e.g., reactive, radioactive or acutely hazardous materials handled or stored):  
Scholl Canyon is presently an active landfill for customers and taken to our hazardous waste storage area which was intended for storage of hazardous materials.

PART V: SITE EMERGENCY FACTORS

A. LIST BELOW AND EXPLAIN SPECIAL HAZARDS THAT EXISTS IN YOUR FACILITY RELATED TO HAZARDOUS MATERIALS. (e.g. explosion, reactive, radioactive or acutely hazardous chemicals that are used, handled or stored):

Scholl Canyon is presently an active landfill site. A small portion of our hazardous material is received through our customers and taken to our hazardous waste area. These materials include paints, old gas, asbestos, insecticides, pesticides, etc. As can be seen in the attached report, Hazardous Waste Incidents Cumulative Report. (This is a list of hazardous waste which was intercepted by the Districts before reaching the active fill. These materials are placed in our hazardous waste storage yard, as shown in the attached diagram. The location of the yard is shown in Exhibit #1. All waste generated and stored in the yard is removed from the landfill within 90 days of being discovered). It is not Scholl Canyon policy to accept these materials, but rather remove these materials from the fill area if found. These materials are removed from the site by one of our hazardous waste haulers.

Other hazardous materials are used to maintain the operation of the landfill. These materials are stored in either the hazardous waste storage yard, equipment yard, or as listed in the hazardous materials inventory sheets.

In addition, landfill gas (LFG) is also present. Landfill gas is a byproduct produced by decomposition of buried waste. The LFG collection system is under vacuum which withdraws the LFG as it is produced. The LFG is either burned in flares on site or compressed at a compression facility and piped 5 miles to the Grayson Power Plant. Scholl Canyon Landfill Gas Limited partnership developed the compression facility and 5 mile pipeline, and bare all responsibility for these two systems. The compression facility is operated by a contractor hired by the city of Glendale. Hence, the hazardous material inventory for the compression facility is not included.

B. LIST BELOW AND IDENTIFY THE EXACT LOCATIONS OF YOUR UTILITY SHUT OFFS. (e.g. power, gas, water etc.).

- |                                  |   |   |
|----------------------------------|---|---|
| <u>Site Water Shut Off</u>       | - | At pump house below main office. (west side)  |
| <u>Power Shut Off</u>            | - | Various locations as shown on Exhibit 1. These locations include; inside main office, at technicians trailer, in the equipment yard at the flaring station, at and near the tub grinder, and in the Scholl Canyon Park. |
| <u>Gasoline and Diesel Tanks</u> | - | Both tanks have turn-offs at the tanks themselves. The main circuit breaker to these tanks is located in the main office (gasoline), and equipment yard (diesel). Please see the enclosed topo for these locations.     |

PART VI: EMPLOYEE TRAINING

COUNTY SANITATION  
OF LOS ANGELES COUNTY  
HAZARDOUS WASTE INCIDENT  
Month: 11 Year:  
HAZARDOUS WASTE CATEGORIES  
CORROSIVES: ACTING

OUTLINE THE STEPS YOUR BUSINESS SHALL TAKE TO MEET THE TRAINING REQUIREMENTS NOTED IN THIS SECTION RELATED TO:

A METHODS FOR SAFE HANDLING OF HAZARDOUS MATERIALS:

All employees handling hazardous materials will be required to wear appropriate equipment (e.g., gloves, boots, suit protection, safety glasses, level C breathing apparatus, field identification kits, etc.) as necessary for the type of hazard.

B. PROCEDURES FOR ASSURANCE OF TRAINING AND MAINTENANCE OF TRAINING RECORDS:

All employees are made aware of all onsite hazards, including the locations and types of hazardous materials. In addition, monthly safety meetings are held with all employees which stress proper safety techniques. This includes, but is not necessarily limited to, safe handling of onsite chemicals, personal protective equipment, safety related incidents, and review of this business plan.

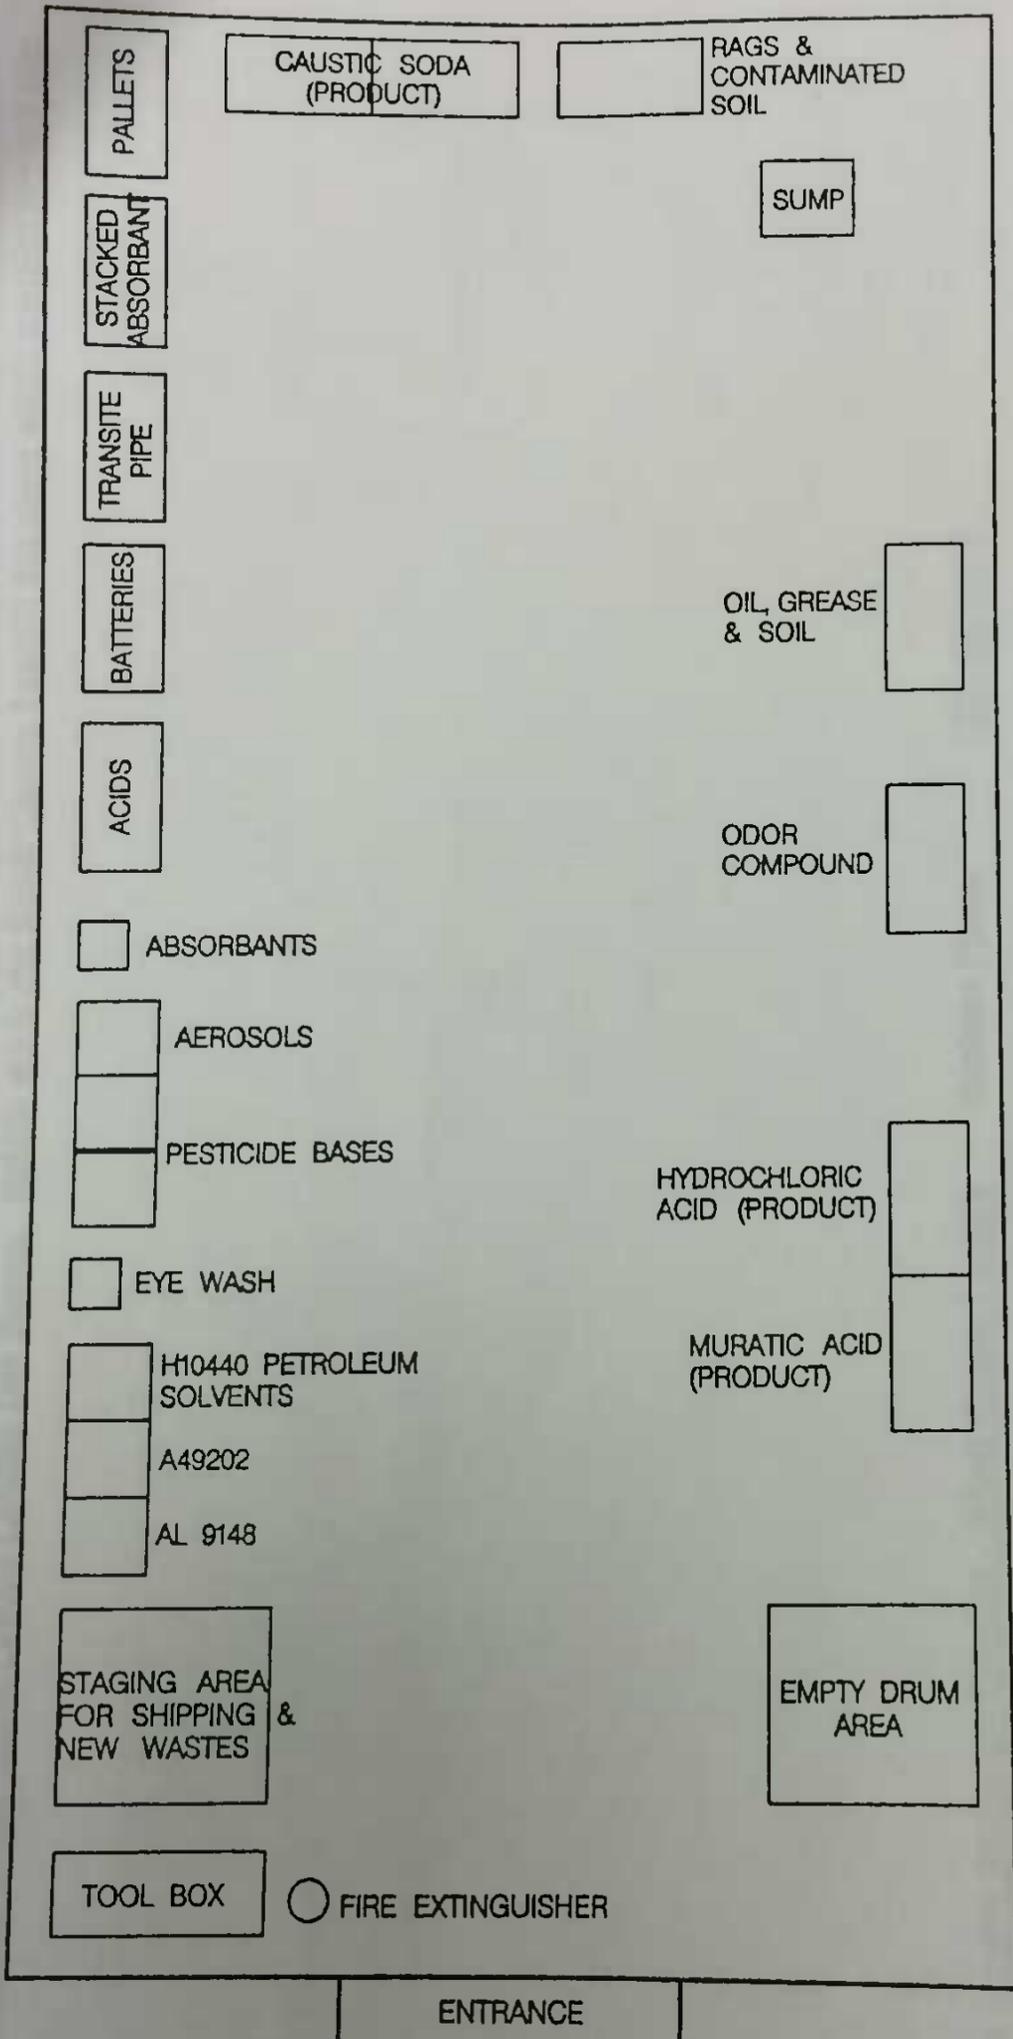

The Districts conduct annual training sessions for all District employees. These classes cover the Districts Emergency Action Plan, Hazardous Communication Plan, Injury and Illness Prevention Program, etc.. A computerized training tracking program is utilized in tracking this training process.

## SCHOLL CANYON LANDFILL FACT SHEET

### LOCATION:

3001 Scholl Canyon Road  
Glendale, CA 91206

In the City of Glendale, north of the Ventura Freeway (Hwy 134)  
at the Figueroa Street exit.

### PROJECT DESCRIPTION:

Scholl Canyon Landfill is owned by the City of Glendale and the County of Los Angeles and is operated by the Sanitation Districts of Los Angeles County (Districts) under a Joint Powers Agreement. The site is open to public access from 8:00 a.m. to 5:00 p.m., six days a week (Monday through Saturday), with the exception of certain holidays.

The landfill is operated in compliance with Federal, State, and local standards, and to eliminate or control any potential impacts on nearby residents. Refuse accepted for disposal is quickly compacted; at the end of each work day all refuse is covered with a confining layer of cover material 9 to 12 inches in depth. Various specific measures are employed to control potential nuisances due to noise, odor, litter, dust and vectors and to minimize landfill traffic and overall visual impacts. In addition, specific systems have been constructed to monitor and control landfill gas migration and to monitor and protect groundwater quality.

### BACKGROUND:

Scholl Canyon Landfill opened in 1961 and accepts only non-hazardous municipal solid waste. The disposal of liquid or hazardous wastes is not allowed. Effective December, 1987, the City of Glendale enacted a municipal ordinance which restricts the use of the landfill to refuse originating from an identified watershed area.

The landfill currently accepts approximately 1,800 tons per day of refuse. Approximately 21.5 million tons of refuse have been placed since the landfill opened. Based on permitted capacity, the remaining life of the site is estimated to be approximately 21 years.

### PERMITS:

Scholl Canyon Landfill operates in compliance with the following permits and requirements.

- Land Use Variance (Case No. 6668-U), issued by the City of Glendale Zoning Administrator.
- Solid Waste Facilities Permit (No. 19-AA-0012), issued by the Los Angeles County Department of Health Services.
- Waste Discharge Requirements (Order No. 88-112 and Order No. 93-062) issued by the California Regional Water Quality Control Board - Los Angeles Region.
- Air Quality permits, issued by the South Coast Air Quality Management District.
- Industrial Wastewater Permit No. W-2762, issued by the City of Glendale.

The Sanitation Districts have installed several sophisticated control systems, which are expanded as necessary, and have implemented several operational programs to eliminate or control possible landfill impacts. These measures include:

- Gas collection and monitoring systems. The natural decomposition of refuse produces a gas composed primarily of equal quantities of carbon dioxide and methane. To prevent migration of gas generated in the landfill and to control odors, the gas is collected through a system of wells and trenches and piped to a central location. The City of Glendale has installed a gas recovery system in the completed northern canyon area of the site and the Districts have installed a gas recovery system on the active landfill. The gas collected in both systems is combined at the active landfill, then processed and piped to the Grayson Power Plant, where it displaces natural gas for power generation. This use of the landfill gas reduces air emissions since the gas would otherwise be flared at the landfill. The flare station at the active landfill is maintained as a backup. To monitor the effectiveness of the gas control systems, subsurface gas monitoring probes have been installed around the perimeter of the site. In addition, surface gas monitoring is conducted across the landfill.
- Groundwater protection system. Two underground barriers have been constructed downgradient of the site to prevent canyon water from contacting groundwater. Barrier water extraction wells have been installed with dedicated pumps on the upgradient side of the barriers where canyon water may become impounded. These wells remove water accumulated on the landfill side of the barriers for treatment. Groundwater monitoring wells have also been installed on the downgradient side of the barriers and around the landfill to sample groundwater quality. Additionally, the design and operation of the landfill allows for the rapid, controlled runoff of rainwater without infiltration into the refuse.
- Landscape irrigation system. Finished slopes of the landfill have been landscaped and irrigation systems have been installed. Additional landscaping and irrigation systems will be installed as landfill operations progress.
- Dust and litter control. Control of dust and litter is carried out on a continuous basis. Water trucks spray the access roads and excavation areas to control dust from truck traffic and landfill operations. Litter is controlled by litter fences and by the daily application of cover material. Sanitation Districts' employees routinely police the area for litter and debris. The Sanitation Districts enacted an ordinance which requires customers using Scholl Canyon Landfill to cover their loads or pay an additional surcharge and be cited. Following three citations for uncovered loads, the customer faces suspension of disposal privileges. This ordinance acts as a deterrent to the littering of roadways leading to the landfill.
- Water conservation measures. Treated canyon water is used for dust control. Reclaimed municipal wastewater will be used for all irrigation system demands and for dust control purposes in the near future.
- Illegally deposited wastes. The Sanitation Districts and the County Health

Department continuously monitor the disposal area for illegally deposited hazardous, toxic, or infectious wastes. The Sanitation Districts have also instituted a load checking program consisting of a random selection of at least five loads each day for a thorough search. If unacceptable wastes are found, they are transferred to appropriate off-site disposal facilities. The hauler whose load contained the waste is charged for the cost of proper disposal, and for repeated violations, faces suspension of disposal privileges. This program acts as a strong deterrent to illegal disposal of wastes at the landfill.

- Resource recovery. The Sanitation Districts have instituted a resource recovery program at the landfill. Dirt and asphalt are accepted free of charge. The dirt is used for daily cover and the asphalt is reused for on-site road construction. Refrigerants are extracted from refrigerators and air-conditioners and the refrigerators and air-conditioners, as well as other large metallic white goods, are removed for salvage. Clean loads of green waste, such as grass and tree trimmings, are accepted at a reduced rate at the landfill. The Sanitation Districts grind the green waste and use it for daily cover, weed abatement, or to produce compost. The green waste recovery program saves valuable landfill capacity and cover soil, and provides an immediate beneficial use for cities implementing separate green waste collection programs.

**ULTIMATE USE:**

The current Joint Powers Agreement specifies that as landfill operations are completed on each major portion of the site, the City of Glendale will develop the areas for parks, recreational use, or for the implementation of solid waste management alternatives or facilities related to the operation of a sanitary landfill at the site. Landfill operations have been completed in a northern canyon area of the site. The City has developed plans for this fill area which include uses such as a golf course, with tennis courts on solid ground adjacent to the fill area.

Landfills are necessary repositories for municipal solid wastes as our society transitions into a greater degree of recycling and energy recovery methods from solid waste. However, even when we develop other solid waste management methods to the fullest extent, the remaining material will still require disposal on the land.

Date

You are required by law to notify the Glendale Fire Division, Hazardous Material Section, in writing, within 15 days of any of the following events:

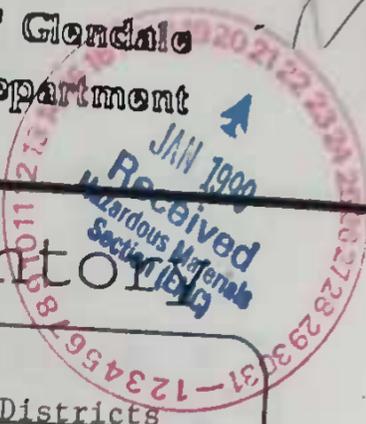

1. Change of business address
2. Change of business ownership
3. Change of business name
4. Cessation of business operation
5. Use or handling of a previously undisclosed hazardous material.
6. A 100% increase in the quantity of a previously disclosed hazardous material.

File No. 0197007.00, Task 17

Mr. Ed Wheless  
Los Angeles County Sanitation Districts  
1955 Workman Mill Road  
Whittier, California 90601**SUBJECT: LOCATION OF CONDENSATE PRETREATMENT FACILITY, SCHOLL  
CANYON LANDFILL GAS PROCESSING FACILITY, GLENDALE,  
CALIFORNIA**

Dear Ed:

As you know, the Scholl Canyon Landfill Gas Limited Partnership (SC-LP) is preparing to design and install a condensate pretreatment facility at the Scholl Canyon site. The enclosed drawing details a proposed location for this facility. In general, the new facility will be located on the spot currently occupied by the SCS Field Services (SCS-FS) office trailer. The office trailer will be relocated directly adjacent to the new facility, as shown.

The depicted location was verbally agreed upon by various parties at an April 1997 meeting at the site attended by representatives of:

- SCS Engineers (SCS)
- SCS-FS
- Los Angeles County Sanitation Districts (LACSD)
- City of Glendale Public Works Department
- City of Glendale Fire Department

Prior to initiating any work at the site, SCS, on behalf of the SC-LP, is seeking written agreement from the LACSD as to the proposed location of the facility. As such, we request that an authorized representative of the LACSD sign in the space provided below and on the attached drawing, indicating your approval of the proposed location. Since the SC-LP is under regulatory pressure to install the system as quickly as possible, your expeditious response to this request is needed. Please fax a signed copy to my office at (562) 427-0805 and mail the original signed agreement to my attention at:

SCS Engineers  
3711 Long Beach Boulevard  
Ninth Floor  
Long Beach, California 90807

As agreed upon in our May 14, 1997 meeting, SCS and Maloney Process Inc. (MPI), the design engineer, will submit the actual system plans and specifications to the LACSD for approval prior to initiating construction of the pretreatment system. However, approval of the proposed location is required as soon as possible so that design work can begin.

Mr. Ed Wheless  
May 27, 1997  
Page Two

If we do not hear from your office by June 12, 1997, we will assume that the proposed location is acceptable to the LACSD. Thank you for your assistance. Please contact the undersigned at (562) 426-9544 if you wish to further discuss any of these issues.

Sincerely,

Patrick S. Sullivan, R.E.A.  
Senior Scientist

CITY OF GLENDALE  
INTERDEPARTMENTAL COMMUNICATION

DATE September 10, 1998

TO Jake Amar, P.W. Engineering

FROM David Starr, Fire Marshal

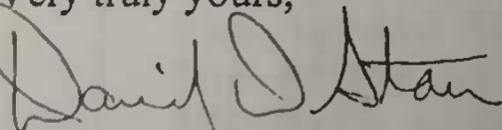

SUBJECT Scholl Canyon Landfill Gas Recovery Project  
Wastewater Sampling Requirements Clarification

In your conversation with Captain Indermill today you stated that a full test for all wastewater components is being completed prior to any batch discharge from this facility per our requirements. Unfortunately, there seems to have been a misunderstanding of what wastewater components needed to be tested.

Per our letter dated December 31, 1997, (copy enclosed) which documented the meeting of December 30, 1997, wherein you and Mr. Desi Alvarez of P.W. Engineering, Steve Cooper of S.C.S. Field Services, Captain Indermill and Inspectors Kitchen and Ahern were present. It was agreed at this meeting that the condensate would be batch treated and tested for compliance with local discharge limits for flammability prior to obtaining discharge authorization from this office. Furthermore it was agreed that if a batch analysis failed local limits for flammability then said batch shall be hauled off-site for legal disposal. Additionally, it was agreed that this would be a temporary solution until adequate pretreatment has been provided, full compliance with discharge limits has been achieved and approval granted from this office. Although, it was not discussed in the December 30, 1997 meeting, it was understood that S.C.S. Field Services would continue to test for all discharge requirements quarterly as required per the Industrial Waste Discharge Permit for this facility.

I hope that this letter clarifies the discharge requirements for the Scholl Canyon Landfill Gas Recovery Project at this time. If you have any questions regarding the above subject matter please contact me at ext. 4810. Please contact Captain Indermill at ext. 4030 to coordinate technical assistance from the EMC Staff.

Very truly yours,

  
David Starr, Fire Marshal

Attention: Gordon L. Deane, President

Subject: NOTICE OF VIOLATION  
Scholl Canyon Landfill Gas Recovery Project  
3001 Scholl Canyon Road

Gentlemen:

This letter will serve to provide notice, and does hereby so provide, that the POTW grab sample of condensate wastewater from the subject facility, taken on December 19, 1997, was found to have a flash point of 81° Fahrenheit in violation of local prohibitive discharge limits of 140° Fahrenheit. Additionally, this sample was found to contain an oil and grease content of 1524 mg/L and a dissolved sulfides content of 4.54 mg/L in violation of their local discharge limits of 600 mg/L and 0.1 mg/L respectfully.

On December 30, 1997, your representative at this facility Mr. Steve Cooper of SCS Field Services was advised of the above violations and was instructed to cease discharge of the condensate to the municipal wastewater system. Per our conversation with Mr. Cooper of SCS Field Services, Mr. Jake Amar and Mr. Desi Alvarez of Glendale P.W. it was agreed that the condensate would be batch treated and tested for compliance with local discharge limits for flammability prior to obtaining discharge authorization from this office. Furthermore it was agreed that if a batch analysis failed local limits then said batch shall be hauled off-site for legal disposal. Additionally, it was agreed that this would be a temporary solution until the cause of the violations have been determined, adequate pretreatment has been provided, full compliance with discharge limits has been achieved and approval granted from this office.

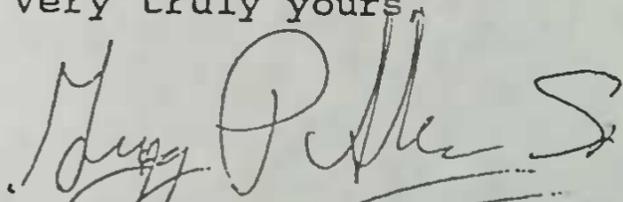

Fire Division  
HAZARDOUS  
MATERIALS  
SECTION

It is required that you submit within 20 days of receipt of this notice of violation a detailed letter of explanation as to the cause of the above violations and corrective actions that will be taken to prevent future violations.

If you have any questions regarding the above subject matter you may contact Doug Kitchen or myself at (818) 548-4030.

Very truly yours,

Gregory P. Ahern, Sr.  
Industrial Waste Inspector

**Subject: Detailed Letter of Explanation for Notice of Violation Dated August 5, 2002  
Industrial Waste Permit W-3142 – Received August 12, 2002**

Dear Mr. Ahern:

This letter is in response to the Notice of Violation (NOV) described above. Thank you for this opportunity to explain in detail the events which occurred and the response to those events regarding the Scholl Canyon Landfill Gas project quarterly sampling of June 11, 2002.

As is explained in detail in the attached letter from Invirotreat Inc. to us, there appears to be a misunderstanding about the timing of when the samples were taken. The statement in your August 5<sup>th</sup> letter that "...duplicate sample was taken 5 minutes after the original sample" is clearly incorrect. Please refer to the attached letter.

As was explained in the Invirotreat Inc. letter dated July 9<sup>th</sup> (also included herein for reference), both the duplicate sample (taken "at the same time" on June 11, 2002) and the re-sampling which occurred on July 3<sup>rd</sup> at your request were below the TTO limit of 2.0 mg/l at 1.758 mg/l and 0.379 mg/l, respectively. On July 3<sup>rd</sup>, the Fire Department also took a simultaneous sample and sent the sample to a separate laboratory. We request that you supply Scholl Canyon Landfill Gas Limited Partnership (SCLP) with the results of your separate sampling from July 3<sup>rd</sup> so that we have as much information as we can about this issue.

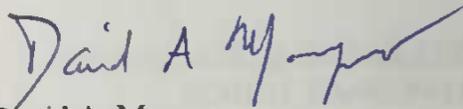

Given that the basis for this NOV appears to be a misunderstanding regarding timing, there should have been no NOV issued. We respectfully request that the City of Glendale retract the above referenced NOV.

Gregory P. Ahern  
August 19, 2002

## CONDENSATE TREATMENT

August 12, 2002

Mr. David Marques  
SCHOLL CANYON LFG LIMITED PARTNERSHIP  
1309 114<sup>th</sup> Avenue SE #101  
Bellevue, WA 98004

Subject: NOTICE OF VIOLATION, AUGUST 5, 2002  
SCHOLL CANYON LFG CONDENSATE TREATMENT SYSTEM

---

Dear Mr. Marques:

Reference is made to a Notice of Violation (NOV) from Greg Ahern of the City of Glendale dated August 5, 2002 regarding the Scholl Canyon LFG Condensate Treatment System (CTS). The violation was issued because the sample taken during the April - June, 2002 monitoring period indicated total toxic organics (TTO's) of 3.63 mg/l which is above the 2.0 mg/l limit. The letter stated that the explanation given by Invirotreat Inc., the CTS consultant, in the Quarterly Report (dated July 9, 2002) was "unacceptable since the duplicate sample was taken 5 minutes after the original sample".

I would like to clarify that the duplicate sample was taken at the same time the original sample was obtained from the Secured Sampling Facility (SSF) following EPA sampling protocol. Two VOC vials were collected consecutively during the sampling event: one vial was analyzed in the original report and the other was analyzed as the duplicate sample. The assumption that the duplicate sample was taken 5 minutes after the original sample, as stated by Mr. Ahern, is incorrect, apparently a result of a misunderstanding.

In the Quarterly Monitoring Report we offered possible explanation regarding the TTO exceedance. We also provided an explanation from Western Analytical Laboratory, who conducted the laboratory analysis, regarding the detection limits used during the analysis. On July 16, 2002 Mr. Ahern conducted a re-test of the final effluent indicating low TTO concentration, well below the discharge limits.

I would like to emphasize that the Scholl Canyon Landfill CTS had no prior discharge violations. In fact, Mr. Brad Everett has kept the plant in great working order during the past three years, repeatedly demonstrating acceptable effluent quality for discharge to the City sewer.

SHIP  
WASTEWATER TREATMENT SYSTEM

As far as actions needed to prevent future violations, I suggest that Scholl Canyon LFG continues to employ the routine operation and maintenance procedures, in accordance with the Process Safety Plan we developed for the facility. Invirotreat will continue to assist the plant staff in process support and oversight to ensure that the effluent discharge limitations are routinely achieved.

If you have any questions, please do not hesitate to call Brad Everett or myself.

Sincerely,

Dr. Alon Lebel  
Project Consultant

**SUBJECT: SCHOLL CANYON LANDFILL, CONDENSATE TREATMENT SYSTEM  
QUARTERLY MONITORING RESULTS FOR THE PERIOD  
APRIL - JUNE 2002  
INDUSTRIAL WASTEWATER DISCHARGE PERMIT NO. W-3142**

Dear Mr. Ahern:

Invirotreat Inc., on behalf of Palmer Management Partnership/Scholl Canyon, is pleased to submit the results of the quarterly monitoring event conducted on June 11, 2002, at the Scholl Canyon Landfill, Condensate Treatment System (Quarterly period April - June 2002). Samples were taken from the Secured Sampling Facility of the Condensate Treatment System, representing the final discharge point to the City sewer. Sampling and analysis were conducted in accordance with the monitoring requirements of Industrial Wastewater Discharge Permit No. W-3142 for the above facility.

As shown in Table 1 (attached), the results indicate - with the exception of the total toxic organics (TTO's) - compliance with the discharge limitations established by the City of Glendale for this facility. The TTO results during the 6/11/02 monitoring event indicated a total concentration of 3.6 mg/l, which is above the 2 mg/l limit. It should be noted that the granular activated carbon (GAC) vessels, which are responsible for removal of TTO's at the Condensate Treatment System, were serviced a few days prior to the testing event and fresh carbon was deposited in the vessels. Therefore, effective removal of TTO's was anticipated.

We were informed of the elevated TTO results on July 2, 2002. The results reflected high concentrations of volatile organic compounds (VOC's). We immediately requested the laboratory to re-test for VOC's (EPA 8260) using the duplicate vial collected during the sampling event. The re-test results indicated TTO's concentration of 1.7 mg/l, which is below the discharge limit. We also collected on July 3, 2002 a fresh sample from the final effluent for VOC analysis. The results from this sampling event indicated TTO concentration of 0.379 mg/l, which is consistent with historic results.

Based on the results of the retest (6/11/02) sample and the fresh sample (7/3/02), and considering the recent service of the GAC vessels, we are confident that the original results for VOC's were erroneous, perhaps due to laboratory contamination. The proactive approach we took to retest the effluent and the fact that in later analytical results the effluent was in compliance with the discharge limits for TTO's support our conclusion discussed above.

CITY OF GLENDALE  
INTERDEPARTMENTAL COMMUNICATION

DATE September 10, 1998

TO Jake Amar, P.W. Engineering

FROM David Starr, Fire Marshal

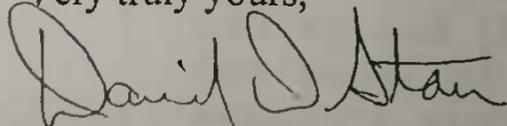

SUBJECT Scholl Canyon Landfill Gas Recovery Project  
Wastewater Sampling Requirements Clarification

In your conversation with Captain Indermill today you stated that a full test for all wastewater components is being completed prior to any batch discharge from this facility per our requirements. Unfortunately, there seems to have been a misunderstanding of what wastewater components needed to be tested.

Per our letter dated December 31, 1997, (copy enclosed) which documented the meeting of December 30, 1997, wherein you and Mr. Desi Alvarez of P.W. Engineering, Steve Cooper of S.C.S. Field Services, Captain Indermill and Inspectors Kitchen and Ahern were present. It was agreed at this meeting that the condensate would be batch treated and tested for compliance with local discharge limits for flammability prior to obtaining discharge authorization from this office. Furthermore it was agreed that if a batch analysis failed local limits for flammability then said batch shall be hauled off-site for legal disposal. Additionally, it was agreed that this would be a temporary solution until adequate pretreatment has been provided, full compliance with discharge limits has been achieved and approval granted from this office. Although, it was not discussed in the December 30, 1997 meeting, it was understood that S.C.S. Field Services would continue to test for all discharge requirements quarterly as required per the Industrial Waste Discharge Permit for this facility.

I hope that this letter clarifies the discharge requirements for the Scholl Canyon Landfill Gas Recovery Project at this time. If you have any questions regarding the above subject matter please contact me at ext. 4810. Please contact Captain Indermill at ext. 4030 to coordinate technical assistance from the EMC Staff.

Very truly yours,

David Starr, Fire Marshal

**SUBJECT: NOTICE OF VIOLATION, SCHOLL CANYON LFG LIMITED PARTNERSHIP,  
3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

Dear Greg:

The Scholl Canyon LFG Limited Partnership (SC-LP) was recently issued a Notice of Violation (NOV, dated July 10, 1997) for violation of its effluent limitation for dissolved oil and grease, which occurred during self monitoring for the second quarter (April through June) 1997. This response to the NOV is provided by SCS Engineers (SCS) on behalf of the SC-LP.

Required re-sampling was conducted on July 2, 1997, and analytical data was reported to the City of Glendale in a letter dated July 11, 1997, as set forth by SC-LP's revised Industrial Waste Discharge Permit (W-3142). During re-sampling, a grab sample was collected from Sampling Point 01. Based on analytical data generated during resampling, Scholl Canyon is in compliance with discharge limitation for oil and grease, as set forth in its Industrial Waste Discharge Permit (W-3142).

Following the May 23, 1997 sampling round, the oil-water separator used in the current pretreatment system was emptied and cleaned. It is believed that an overload of the oil-water separator led to the violation that was reported from the May 23, 1997 sampling event. Therefore, in order to avoid any further oil and grease violations, SC-LP proposes to increase the inspection patrols in the area of the oil-water separator unit, as well as cleaning the unit on an expedited schedule. Further, SC-LP is prepared perform visual inspections during discharge as well as conducting organic vapor monitoring in order to ensure no future violation for total toxic organics or oil and grease. SC-LP feels that these actions will aid in the mitigation of the current oil and grease problems which led to violations in the first and second quarters of 1997.

SC-LP is also currently looking into the possibility of bringing the oil-water separator component of the new pretreatment system on-line prior to the scheduled start-up date of November 1997. SC-LP will apprise the City of Glendale on the feasibility of this option following discussions with the system designers and construction subcontractors.

We are hopeful that this above approach will be acceptable to the City of Glendale. Please address any questions or comments related to this submittal to our office.

Attention: Gordon Deane, President

Subject: Notice of Violation  
Scholl Canyon LFG Limited Partnership  
3001 Scholl Canyon Road

Gentlemen:

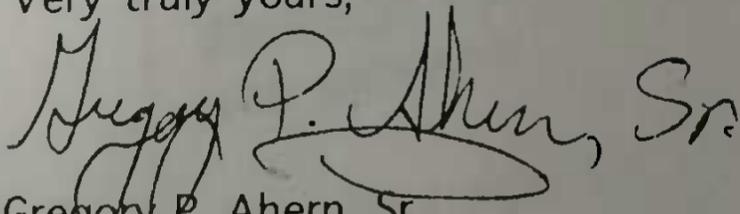

This letter will serve to provide notice the self-monitoring grab sample of condensate wastewater from the subject facility, taken on May 23, 1997, was found to contain an Oil/Grease (O&G) content of 708 mg/L in violation of local discharge limits of 600 mg/L.

Cease and desist immediately from any and all violations of established local limits for discharge to the municipal wastewater system. You are required to submit a detailed letter of explanation as to the cause of the above violation and a description of corrective actions that will be taken to prevent future violations. As a result of recent violations for O&G at your facility this office can not wait for the November start-up date of your new pretreatment system. Consequently, it is necessary that additional pretreatment measures be addressed immediately for O&G. It is necessary that your response be submitted to this office prior to July 28, 1997.

It is important to note that continued violations may result in referral to the City Attorney for appropriate action.

If you have any questions you may contact Doug Kitchen or myself at (818)548-4030.

Very truly yours,

Gregory P. Ahern, Sr.  
Industrial Waste Inspector

Attention: Gordon L. Deane, President

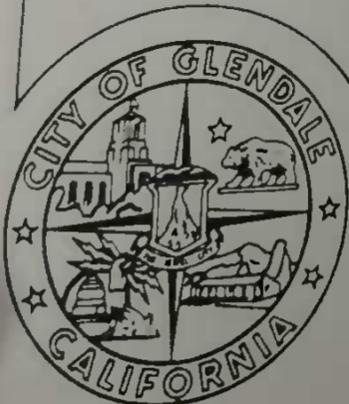

Subject: NOTICE OF VIOLATION  
3001 Scholl Canyon Road

Gentlemen:

This letter will serve to provide notice, and does hereby so provide, that the industrial wastewater discharge to the municipal wastewater system from the subject facility has been found to be a public nuisance, in violation of GMC Section 13.40.310(B)(1)(a)(v).

On Wednesday April 23, 1997, Inspectors Ahern and Kitchen responded to the subject facility as a result of an odor complaint in Glenoaks Canyon. SCS Field Staff were advised of the complaint and were informed that all condensate wastewater discharge must immediately cease until adequate pretreatment was provided.

On Friday April 25, 1997, Inspector Kitchen once again responded to the subject facility as a result of additional odor complaints. He found that wastewater was being discharged and that no repairs to the pretreatment system had occurred. Again SCS Field Staff were informed that all condensate wastewater discharge must immediately cease.

(818) 548-4030

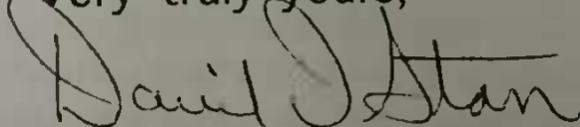

Please cease and desist immediately from any and all violations of established local limits for discharge to the municipal wastewater system. All industrial wastewater from the subject facility shall be hauled off-site for legal disposal until such time that adequate pretreatment has been provided and full compliance with discharge limits has been achieved. A manifest file, which shall be available for inspection at all times, shall be maintained for proof of legal disposal of all hauled wastewater.

Our policy requires that you submit a detailed description of corrective actions that will be taken to prevent future violations. We should receive your response no later than May 15, 1997.

At your option, you may provide the above required pretreatment or permanently haul the condensate wastewater for legal off-site disposal.

If you have any questions regarding this matter, please contact the Industrial Waste Program at (818) 548-4030.

Very truly yours,

David D. Starr  
Fire Marshal

## BASELINE MONITORING REPORT

### SECTION 1. GENERAL INFORMATION

A. This report is for an *existing sewer connection*.

B. **Company Name:**

Scholl Canyon LFG Limited Partnership  
SIC Code: 4953

C. **Business Address:**

13 Elm Street, Suite 200  
Cohasset, MA 02025

D. **Location of Site Discharging Wastewater:**

3001 Scholl Canyon Road  
Glendale, CA 91206

E. **Person Responsible for Industrial Wastewater Discharge:**

Gordon Deane, President  
(617) 383-3200

F. **Number of Employees:**

On-Site: 1 full time, 1 part time (contract personnel)

G. **Operation Schedule:**

24 hours/day, 365 days/year

H. **Variation of Operation:**

The operation of the landfill gas (LFG) processing plant and generation of industrial wastewater is a continuous process. No variation is anticipated. The operation is conducted 7 days per week.

ORIGINAL

## SECTION II. WASTEWATER DISCHARGE

### A. Time and Duration of Industrial Wastewater Discharge to Sewer System:

- Discharge occurs 24 hours per day, 7 days per week.
- Discharge is continuous and occurs in 1500-gallon increments with pretreatment occurring at a rate of approximately 10 gallons/minute for 150 minutes.

### B. The Following Wastewater Flow Rates to the Sewer System Are Expected to Occur:

- Maximum daily flow of 6,000 gallons/day
- Five-Minute peak flow rate of 10 gallons/minute
- Annual daily average flow rate of 3,300 gallons/day (averaged quarterly)

### C. Source of Water Received and the Estimated Average Quantity of Wastewater Discharged Daily:

- The source of the water which becomes wastewater is moisture entrained in the LFG processed through the system. During the compression and refrigeration processes, the moisture is condensed and becomes a liquid waste stream.
- All of the condensate generated becomes wastewater that is discharged to the sewer system, approximately 3,300 gallons/day (average).

## SECTION III. RAW MATERIALS AND CHEMICALS

The only raw material used in the manufacturing process is LFG from the Scholl Canyon Landfill. Other chemicals used at the site that may be found in the wastewater discharged from the facility include:

| <u>Technical Name</u>    | <u>Common Name</u>      | <u>Manufacturer's Name</u> |
|--------------------------|-------------------------|----------------------------|
| Activated Carbon         | Carbon fines            | Westates                   |
| A105 Oil                 | Lube Oil                | Gibraltar                  |
| Pacemaker 840            | Compressor Oil          | Citgo                      |
| Calcium Hypochlorite     | Chlorine                | Sun Burn                   |
| YWO7 Glycerine           | Glycerine               | Waukesha                   |
| Monoethanolamine         | Sulfa-Treat             | Van Rogers & Waters        |
| 02353 Antifreeze/coolant | Antifreeze              | Texaco                     |
| Weld-On Primer 2711      | Weld Preparation Primer | IPS                        |
| Weld-On Cement 2711      | Weld Sealer             | IPS                        |
| Cationic Polymer 9069    | Wastewater polymer      | Aqua-Serv                  |
| Sulfuric Acid            | Sulfuric acid           | Pressure Vessel Service    |
| Coagulant Polymer 9420   | Wastewater coagulant    | Aqua-Serv                  |
| Coagulant 9423           | Wastewater coagulant    | Aqua-Serv                  |
| Anionic Polymer          | Wastewater polymer      | Aqua-Serv                  |
| Sodium Hydroxide         | Caustic soda            | Pressure Vessel Service    |
| Odor Control             | Odor control agent      | Chemco                     |

Material Safety Data Sheets (MSDSs) for these materials are attached to this document.

**SECTION IV. DESCRIPTION OF OPERATIONS**

- In the LFG processing operation, LFG is treated, producing a product gas which is delivered to the City of Glendale power plant. This operation occurs under SIC Code No. 4953.
- In the condensate pretreatment operation, approximately 3,300 gallons/day of condensate is treated and discharged to the sewer system. This operation occurs under SIC Code No. 4953.

**SECTION V. NATURE OF POLLUTANTS IN WASTEWATER DISCHARGE**

The following pollutants are presented or suspected of being present in the wastewater discharged to the sewer system:

**A. Metals and Inorganics**

Arsenic, Chromium, Copper, Cyanide, Lead, Mercury, Nickel, Silver, and Zinc.

**B. Phenols and Cresols**

Phenol(s)

**C. Monocyclic Aromatics**

Benzene, Chlorobenzene, 1,2-Dichlorobenzene, 1,4-Dichlorobenzene, 1,2,4-Trichlorobenzene, Ethylbenzene, Toluene, and Xylenes

**D. PCBs and Related Compounds**

None anticipated or detected in previous monitoring events.

**E. Ethers**

None anticipated or detected in previous monitoring events.

**F. Nitrosamines and Other Nitrogen-Containing Compounds**

None anticipated or detected in previous monitoring events.

**G. Halogenated Aliphatics**

Chloromethane, Dichloromethane, Trichloromethane, Tetrachloromethane, 1,1-Dichloroethane, 1,2-Dichloroethane, 1,1,1-Trichloroethane, 1,1,2-Trichloroethane, Chloroethene, 1,1-Dichloroethene, Trichloroethene, Tetrachloroethene, 1,2-Dichloropropane, and 1,3-Dichloropropane.

**H. Phthalate Esters**

Di-n-octylphthalate and Bis(2-ethylhexyl)phthalate

**I. Polycyclic Aromatic Hydrocarbons**

Styrene and Naphthalene

**J. Pesticides**

None anticipated or detected in previous monitoring events.

**K. Conventional Pollutants**

Biochemical Oxygen Demand (BOD) > 240, Total Suspended Solids (TSS) > 250, oil and grease, and ammonia.

**SECTION VI. WASTEWATER PRETREATMENT SYSTEM**

**A. Type of Pretreatment**

Pretreatment is *chemical* and *physical* and will occur in a *continuous mode*.

**B. Treatment Technologies**

**1. Physical/Chemical Treatment**

|    |                               |   |
|----|-------------------------------|---|
| a. | Activated Carbon Adsorption:  | Granular  |
| b. | Chemical Oxidation:           | Chlorine  |
| c. | Chemical Precipitation:       | None  |

| n. | Oil Separation:               | Gravity Separators, Skimmers, and Emulsion Breaking |
| o. | Resin Adsorption:             | None  |
| p. | Reverse Osmosis:              | None  |
| q. | Screening:                    | None  |
| r. | Sedimentation:                | None  |
| s. | Stripping:                    | Air   |
| t. | Solvent Extraction:           | None  |
| u. | Ultrafiltration:              | None  |

**2. Biological Treatment**

None

**SECTION VII. ENVIRONMENTAL CONTROL PERMITS AND LICENSES**

- South Coast Air Quality Management District (SCAQMD) permit for a LFG treatment facility (No. D 90397)
- SCAQMD permit for a condensate collection, storage, and treatment facility (No. D 93189). Permit is in the process of being modified.

- SCAQMD permit for an air stripper (No. D 11334). The operator status on the permit is currently being transferred from the Los Angeles County Sanitation Districts to the Scholl Canyon LFG Limited Partnership.
- City of Glendale permit for hazardous material usage (No. 700599.00)

**SECTION VIII. PROCESS ACTIVITIES**

| <u>Operation</u>                                     | <u>Status</u> |
|--|---------------|
| Aluminum Forming                                     | Not Conducted |
| Battery Manufacturing                                | Not Conducted |
| Coil Coating   | Not Conducted |
| Copper Forming                                       | Not Conducted |
| Electrical and Electronic Components                 | Not Conducted |
| Electroplating                                       | Not Conducted |
| Iron and Steel                                       | Not Conducted |

| Porcelain Enameling                                  | Not Conducted |
| Pulp, Paper, and Paperboard Production               | Not Conducted |
| Steam Electric Power Generation                      | Not Conducted |
| Timber Products Processing                           | Not Conducted |
| Textile Mills  | Not Conducted |

**SECTION IX. PLANS AND DIAGRAMMS**

**A. Site Plan**

A site plan for the facility is currently being developed as part of the project to upgrade the condensate pretreatment system. A copy of the site plan will be provided for your review when it is completed.

**B. Floor Plan**

A floor plan for the facility is currently being developed as part of the project to upgrade the condensate pretreatment system. A copy of the floor plan will be provided for your review when it is completed.

**C. Process Unit Design Specification and Schematic Diagram**

A diagram and specification for the LFG processing facility was previously submitted to the City of Glendale Fire Department, Industrial Waste Program. No significant changes have been made to the LFG processing system since the last submittal.

**D. Pretreatment System Design Specification and Schematic Diagram**

A pretreatment system design specification and schematic diagram for the facility is currently being developed as part of the project to upgrade the condensate pretreatment system. Copies of these documents will be provided for your review when they are completed.

**E. Operations and Maintenance Plan**

An operations and maintenance plan for the facility will be developed after installation and start-up of the upgraded pretreatment system. A copy of this document will be provided as soon as it is available.

**F. Contingency Plan for Spills, Overflows, and System Failures**

A contingency plan for the facility was previously submitted to the City of Glendale Fire Department, Industrial Waste Program. This document is currently being updated to reflect changes to the pretreatment system. A copy of the revised contingency plan will be submitted as soon as it is available.

**SECTION X. WASTEWATER FLOW MEASUREMENT**

| <u>Regulated Process (Type)</u> | <u>Daily Average (gal/day)</u> | <u>Daily Maximum (gal/day)</u> | <u>Estimated (E) or Measured (M)</u> |
|---------------------------------|--------------------------------|--------------------------------|--------------------------------------|
| LFG Condensate                  | 3,300                          | 6,000                          | E                                    |

## **SECTION XI. MEASUREMENT OF POLLUTANTS**

### **A. Sample Type**

Both grab and composite samples are collected from the facility's discharge to evaluate compliance with the facility's industrial wastewater discharge permit (W-3142)

### **B. Frequency of Samples**

Samples are collected on a quarterly basis.

### **C. Time, Date, and Sampling Location**

The sampling location is on the discharge from the facility's existing carbon adsorption unit. As part of the facility upgrade, a secured sampling facility (SSF) is being constructed in accordance with City of Glendale requirements. The time and date of sampling events vary during each quarter. These times/dates are listed on the Periodic Compliance Reports that are submitted for each quarterly sampling event.

### **D. Method of Analysis**

The analytical methods vary for each regulated pollutant. These methods are listed on the Periodic Compliance Reports and laboratory reports that are submitted for each quarterly sampling event.

### **E. Comparison of Results with Applicable Pretreatment Standards**

This activity is completed for each sampling event and is provided within the Periodic Compliance Reports.

### **F. Alternative Limits**

No alternative limits are proposed for the Scholl Canyon LFG processing facility.

Please note that copies of two recent Periodic Compliance Reports for the facility are attached to this document.

SECTION 1

SECTION 2

SECTION XIII. CERTIFICATION

I have personally examined and am familiar with the the information submitted in this application, and I hereby certify under penalty of law that this information was obtained in accordance with applicable requirements. Moreover, based on my inquiry of those individuals immediately responsible for obtaining the information reported herein, I believe that the submitted information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

**SUBJECT: ENGINEERING PLAN, MODIFICATIONS TO OIL/WATER SEPARATION APPARATUS, CONDENSATE PRETREATMENT SYSTEM, SCHOLL CANYON LANDFILL GAS RECOVERY FACILITY, 3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

To Whom It May Concern:

This letter provides an Engineering Plan for modifications to the landfill gas (LFG) condensate pretreatment system at the Scholl Canyon LFG recovery facility. Modifications described herein apply specifically to proposed enhancements to the oil/water separation apparatus.

This document was prepared by SCS Engineers (SCS) on behalf of the Scholl Canyon LFG Limited Partnership (SC-LP) and is intended to meet the "engineering plan" requirements of the facility's industrial wastewater discharge permit (No. W-3142). The process modifications were designed and will be installed by Aqua-Serv Engineers (Aqua-Serv).

## **PROPOSED MODIFICATIONS TO THE OIL/WATER SEPARATION APPARATUS**

### **General Specifications**

LFG condensate generated by the compression station will be directed to a 4,000 gallon tank for equalization and storage prior to treatment. The equalization tank will be equipped with a skimming device that will remove floating oil, if any, to the maximum extent possible. The skimmed oil will flow by gravity into the existing above ground waste oil storage tank.

After equalization, condensate will be pumped through a chemical treatment system to enhance oil/water separation. The chemical treatment process will function to break oil emulsions in the condensate and to facilitate oil flocculation through the following process steps:

- **pH Adjustment #1.** This first pH adjustment step will prepare the condensate for the breaking of oil emulsions. The pH of the condensate will be lowered through in-line injection and mixing of sulfuric acid which will be controlled using a pH meter and controller. The design pH for this process step will be between 4.0 and 5.0; however, start-up testing will determine the final operating pH.
- **Chemical Addition #1.** After pH adjustment, a chemical polymer (Aqua-Serv No. X6201) will be injected into the condensate and mixed using an in-line mixer. This polymer will assist in the breaking of oil emulsions in the condensate.
- **Chemical Addition #2.** The second chemical added to the system is an emulsion breaker (Aqua-Serv No. 9420) which will work in conjunction with X6201 to complete the breaking of oil emulsions.
- **pH Adjustment #2.** This second pH adjustment step will prepare the condensate for oil flocculation and will consist of adding sodium hydroxide to raise the pH of the process stream. The design pH for this process step will be between 9.0 and 10.0; however, start-up testing will determine the final operating pH.
- **Chemical Addition #3.** A chemical coagulant (Aqua-Serv No. 9423) will be injected into the condensate and mixed using an in-line mixer. This chemical is the first of two coagulants that will be added to the system.
- **Chemical Addition #4.** The second chemical coagulant (Aqua-Serv No. 9406) will also be injected into the condensate and mixed using an in-line mixer.
- **Chemical Addition #5.** Following the addition of the two coagulants, a chemical flocculant (No. 9073) will be added to the system and mixed using an in-line mixer. This flocculant will complete the chemical treatment process.
- **Oil/Water Separator.** After chemical treatment, treated condensate will flow into the existing surge tank and oil/water separator for physical separation. The removed oil will flow by gravity into the existing above ground waste oil tank. The treated effluent will flow into the existing effluent storage tank and then will be pumped to the condensate storage tanks at the air stripper station. The remainder of the pretreatment process remains unchanged at this time: air stripping, carbon adsorption, and final discharge.

All process and chemical tanks used in this system will be equipped with adequate secondary containment and will be vented to an existing carbon adsorption system ("vent scrub" unit). Treatment chemicals will be stored in 110- or 165-gallon chemical tanks and injected using automatic chemical metering pumps. With the exception of the chemical flocculant, liquid chemicals will be mixed using in-line, continuous static mixers. The flocculant (9073) is a dry solid chemical and will be mixed, prior to injection, in a 200-gallon chemical tank equipped with an agitator.

#### Basis of Design

Prior to selecting the above process design for implementation at the site, SCS and SC-LP reviewed two proposed options for oil/water separation at the Scholl Canyon facility. These options were delineated in "design-build" proposals submitted by Maloney Process Inc. (MPI), dated April 1996, and Aqua-Serv, dated July 1996 (revised December 1996). These proposals are provided as attachments to this document.

In addition to the proposals, SCS observed and reviewed treatability tests completed by MPI and Aqua-Serv. Through chemical treatment of the condensate, the two contractors proposed to provide enhanced removal of oil from the condensate. Treatability tests completed by the contractors included laboratory-scale tests on raw condensate samples collected from the Scholl Canyon site. These laboratory tests were intended to mimic the full-scale treatment systems proposed by the contractors.

In both cases, the contractors were able to achieve substantial visible oil/water separation using chemical treatment. However, only Aqua-Serv was able to verify adequate oil removal through laboratory testing. Laboratory results (copies enclosed) for treated condensate samples indicate that MPI was only able to achieve a residual oil and grease level (as measured by EPA Method 413.2) of 418 mg/L. Aqua-Serv was able to achieve a residual oil and grease level of 67.2 mg/L.

Note that oil and grease levels in the raw condensate ranged from 3,000 to 5,000 mg/L. As a second point of reference, the air stripper at the site is rated for effective performance at oil and grease levels less than 100 mg/L.

Since the capital costs associated with each proposal were similar (i.e., approximately \$38,000 for MPI and \$43,000 for Aqua-Serv), SCS recommended that SC-LP enlist the services of Aqua-Serv on this project due to their demonstrable performance in the treatability studies. As such, a "design-build" contract for completion of modifications was awarded to Aqua-Serv.

#### System Installation

As indicated above, system installation will be completed by Aqua-Serv. A construction schedule will be provided to your office as soon as it is available. The anticipated start date for construction activities is February 18, 1997.

Throughout the duration of the project, SCS will oversee installation activities and provide construction quality assurance (CQA) on behalf of SC-LP. System start-up, periodic maintenance, and operator training will be provided by Aqua-Serv with assistance provided by SCS. SCS will also be developing an operations and maintenance (O&M) manual for use by operator personnel.

#### System Drawings and Specifications

As previously mentioned, a copy of the revised Aqua-Serv proposal (December 1996) is included for your files. This proposal contains the following attachments that will serve as the necessary design drawings and specifications for the system:

- **Attachment A.** Chemical dosages and costs based on a maximum design capacity of 4,000 gallon per day (gpd), excluding sulfuric acid and sodium hydroxide.
- **Attachment B.** Equipment listing and cost estimate for all necessary system components.
- **Attachment C.** Facility plot plan, showing the proposed location of the system modifications and additional equipment to be installed at the site. Note that the 20,000-gallon *Baker* tank has been taken out of service and removed from the facility.
- **Attachment D.** Process flow diagram, depicting all process steps, as described above.

We are hopeful that these drawings are sufficient to meet your needs at this time. Please note that SCS and/or SC-LP are not intending to produce "as-built" drawings after construction of the proposed modifications.

Five

#### CLOSING

The above modifications have been implemented to minimize many of the existing system problems that have been caused by excess oil in the waste stream. It is our belief that with the removal of oil from the system: (1) the current odor problem will be rectified, (2) the air stripper will operate properly, and (3) the carbon adsorption unit will be unnecessary or used only as a polishing unit.

If you have any questions regarding this submittal, please do not hesitate to contact me or Julio Nuno at (310) 426-9544.

Sincerely,

Patrick S. Sullivan, R.E.A.

**SUBJECT: PROJECT TIME TABLE, UPGRADE TO CONDENSATE PRETREATMENT SYSTEM, SCHOLL CANYON LFG LIMITED PARTNERSHIP, 3001 SCHOLL CANYON ROAD, GLENDALE, CALIFORNIA (W-3142)**

Dear Greg:

The enclosed letter details a response to your letter of May 5, 1997 to the Scholl Canyon Landfill Gas (LFG) Limited Partnership (SC-LP), regarding the condensate pretreatment system at the Scholl Canyon LFG processing facility. This response letter was prepared by SCS Engineers (SCS) on behalf of the SC-LP.

Your May 5, 1997 letter indicates that SC-LP failed to apply for renewal of its industrial wastewater discharge permit (W-3142) within 90 days of the expiration date (May 23, 1997) as required by the permit. The reason for this oversight was that SC-LP was anticipating receipt of a permit renewal application in the mail and did not. We apologize for the oversight.

As requested in your letter, SC-LP recently filed for a 90-day temporary industrial wastewater permit (IWP), which we assume has been granted. By our estimation, the 90-day temporary permit will expire on August 23, 1997. As indicated in our recent conversation, SC-LP will not be issued a formal permit renewal until modifications to the pretreatment system are complete. Therefore, by July 23, 1997 (30 days prior to the expiration of the temporary permit), SC-LP will file for a second temporary 90-day permit, which will allow us to operate through November 23, 1997. As shown in the enclosed project schedule, the modifications to the pretreatment system will be completed by November 1, 1997.

By October 23, 1997 (30 days prior to the expiration of the second temporary permit), SC-LP will be required to apply for a formal permit renewal, which, as we understand it, will entail preparation and submittal of a Baseline Monitoring Report (BMR) and tiered permitting documentation. If there is any additional documentation that must be completed for formal permit renewal, please forward a copy to SCS, who will be completing this work on behalf of SC-LP.

Finally, your May 5, 1997 letter requires that SC-LP submit a project time table, detailing specific milestones related to the upgrade of the condensate system. The proposed time table is presented below:

---

| <u>Item/Activity</u>  | <u>Completion Date</u> |
|---|------------------------|
| Completion of design plans and specifications and submittal to various reviewing agencies | July 3, 1997           |
| Submittal of Baseline Monitoring Report (BMR)   | July 15, 1997          |
| Submittal of application for second temporary 90-day industrial wastewater permit         | July 23, 1997          |
| Construction of concrete slab and berm  | August 1, 1997         |
| Completion of concrete cure   | September 1, 1997      |
| Application of epoxy lining for concrete  | September 5, 1997      |
| Installation of system components   | October 3, 1997        |
| Submittal of application for formal permit renewal  | October 23, 1997       |
| Completion of start-up and system testing   | October 31, 1997       |

---

We assume that this schedule will be acceptable to your office. Please note that a construction contract to complete the pretreatment system upgrades was recently awarded to Maloney Process Inc. (MPI). The project is currently underway. If you have any questions regarding this submittal, please do not hesitate to contact the undersigned or Jim Bier of SCS Field Services.

Sincerely,

Patrick S. Sullivan, R.E.A.
